Tax Treaties for Investment and Aid to Sub-Saharan Africa

A CASE STUDY

Allison D. Christians[†]

I. INTRODUCTION

The U.S. is committed to increasing trade and investment to less developed countries (LDCs),¹ particularly

[†] Assistant Professor of Law, University of Wisconsin. I thank Professors Reuven Avi-Yonah, Yariv Brauner, David Cameron, Charlotte Crane, Steven Dean, Kwame Gyan, Michael McIntyre, Robert Peroni, and Miranda Stewart, as well as Justice Margaret Insaidoo and Kweku Ackaah-Boafo, Esq., for their many helpful comments and suggestions. This Article benefited from a presentation at the International Economic Law Forum at Brooklyn Law School. I am grateful for the generous financial support for this research, provided under a grant by The Educational Partnership Programs Bureau of Educational and Cultural Affairs, U.S. Department of State, Education for Development and Democracy Initiative, as well as financial and academic support from the University of Ghana, Faculty of Law and the Northwestern University School of Law.

¹ There is no uniform convention for the designation of a country as “less developed.” The term is generally used to reflect a country’s economic status or growth potential. In the context of taxation, these labels may be used to distinguish “in a general way between countries with highly developed, sophisticated tax systems and those whose tax systems are at an earlier stage of development.” VICTOR THURONYI, *TAX LAW DESIGN AND DRAFTING*, at xxvii n.1 (1996). In the United States, the Central Intelligence Agency (CIA) delineates three categories in a hierarchy, consisting of 34 “developed countries,” 27 “former USSR/Eastern Europe,” and 172 “less developed countries” (all other recognized countries, including all of Sub-Saharan Africa except South Africa). See CENTRAL INTELLIGENCE AGENCY, OFFICE OF PUBLIC AFFAIRS, *THE WORLD FACTBOOK 2005* (GPO 2005) [hereinafter *WORLD FACTBOOK*] (defining LDCs in Appendix B) (An internet version of the *WORLD FACTBOOK* is available at <http://www.cia.gov/cia/publications/factbook>. The internet version varies in format and content from the print version and is updated frequently; this article references the data found in the print version except where otherwise noted.) As a rough guide to U.S. foreign policy, this article incorporates the CIA terms. For a discussion of the arbitrary and often unyielding nature of these designations despite changes in a

those in Sub-Saharan Africa, where poverty-related conditions are extreme and foreign trade and investment minimal.² This commitment is demonstrated in U.S. efforts to negotiate agreements to eliminate trade barriers such as tariffs and quotas with many of these countries.³ U.S. officials also consistently proclaim a commitment to enter into tax treaties with LDCs,⁴ on the theory that tax treaties can eliminate

particular country's economic status or prospects, see *What's in a name?*, *ECONOMIST*, Jan. 17, 2004, at 11.

² Since the late 1980s, increasing trade with and investment in LDCs has become a preferred means of providing aid to such countries. See, e.g., PAUL B. THOMPSON, *THE ETHICS OF AID AND TRADE* 2 (1992); see also Bruce Zagaris, *The Procedural Aspects of U.S. Tax Policy Towards Developing Countries: Too Many Sticks and No Carrots?*, 35 *GEO. WASH. INT'L L. REV.* 331, 384 (2003) (stating that the "official policies" of the U.S. "are to mobilize private capital rather than foreign aid."). For an overview of poverty conditions and foreign investment in African nations, see, for example, U.N. Conference on Trade and Development, *Foreign Direct Investment in Africa: Performance and Potential* 1-2, 21 U.N. Doc. UNCTAD/ITE/IIT/Misc. 15 (1999) [hereinafter UNCTAD] (stating that foreign investors typically associate Africa with "pictures of civil unrest, starvation, deadly diseases and economic disorder," and foreign investment "inflows into Africa have increased only modestly" since the 1980s).

³ The main agreement is the African Growth and Opportunity Act (AGOA), a trade preference agreement, discussed *infra* note 18. The U.S. is also currently negotiating a free trade agreement with the South African Customs Union (comprised of South Africa, Botswana, Lesotho, Namibia, and Swaziland). See United States Trade Representative, *Background Information on the U.S.-SACU FTA* (2003), available at http://www.ustr.gov/Trade_Agreements/Bilateral/Southern_Africa_FTA/Background_Information_on_the_US-SACU_FTA.html.

⁴ See, e.g., The Japanese Tax Treaty (T. Doc. 108-14) and the Sri Lanka Tax Protocol (T. Doc. 108-9); Hearing Before the Comm. on Foreign Relations, 108th Cong. 29 (2004) ("[w]e are trying to expand the scope of these treaties to developing countries."); Joseph H. Guttentag, *An Overview of International Tax Issues*, 50 *U. MIAMI L. REV.* 445, 450 (1996) ("[t]ax treaty expansion in this area is a high Treasury priority."); Press Release, U.S. Treasury Dep't, Treasury Welcomes Entry into Force of U.S.-Sri Lanka Income Tax Treaty (July 22, 2004), available at <http://www.treas.gov/press/releases/js1809.htm> [hereinafter Treasury Press Rel. JS-1809] ("The Treasury Department is committed to continuing to extend and broaden the U.S. tax treaty network, including new agreements with emerging economies."). The U.S. currently has 16 tax treaties with LDCs: Barbados, China, Cyprus, Egypt, India, Indonesia, Jamaica, Korea, Morocco, Pakistan, Philippines, Sri Lanka, Thailand, Trinidad and Tobago, Tunisia, and Venezuela. Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Barb., Dec. 31, 1984, T.I.A.S. No. 11,090 [hereinafter U.S.-Barbados Treaty]; Agreement for the Avoidance of Double Taxation and the Prevention of Tax Evasion with Respect to Taxes on Income, U.S.-P.R.C., Apr. 30, 1984 T.I.A.S. No. 12065 [hereinafter U.S.-China Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Cyprus, Mar. 19, 1984, 35 U.S.T. 4737 [hereinafter U.S.-Cyprus Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Egypt, Aug. 24, 1980, 33 U.S.T. 1809 [hereinafter U.S.-Egypt Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-India, Sept. 12, 1989, S. TREATY DOC. NO. 101-5 (1990) [hereinafter U.S.-India Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Indon., July 11, 1988, T.I.A.S. No. 11593 [hereinafter U.S.-Indonesia Treaty]; Convention for the

excessive taxation and therefore help to increase trade and investment between the partner countries.⁵ As such, tax treaties appear to be a perfect complement to trade agreements in furthering U.S. efforts to increase trade and investment in LDCs. Yet there are currently no tax treaties in force between the U.S. and any of the LDCs in Sub-Saharan Africa.⁶

Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Jam., May 21, 1980, 33 U.S.T. 2865 [hereinafter U.S.-Jamaica Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and the Encouragement of International Trade and Investment, U.S.-S. Korea, June 4, 1976, 30 U.S.T. 5253 [hereinafter U.S.-Korea Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Morocco, Aug. 1, 1977, 33 U.S.T. 2545 [hereinafter U.S.-Morocco Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Pak., July 1, 1957, 10 U.S.T. 984; Convention with Respect to Taxes on Income, U.S.-Phil., Oct. 1, 1976, 34 U.S.T. 1277 [hereinafter U.S.-Philippines Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Sri Lanka, Mar. 14, 1985, S. TREATY DOC. No. 99-10 (2004) [hereinafter, U.S.-Sri Lanka Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Thail., Nov. 26, 1996, S. TREATY DOC. No. 105-2 (1998) [hereinafter U.S.-Thailand Treaty]; Convention for the Avoidance of Double Taxation, the Prevention of Fiscal Evasion with Respect to Taxes on Income, and the Encouragement of International Trade and Investment, U.S.-Trin. & Tobago, Jan. 9, 1970, 22 U.S.T. 164 [hereinafter U.S.-Trin. & Tobago Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Tunis., June 17, 1985, as amended by Prot., 29 I.L.M. 1580 [hereinafter U.S.-Tunisia Treaty]; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital, U.S.-Venez., Jan. 25, 1999, 38 I.L.M. 1707 [hereinafter U.S.-Venezuela Treaty].

⁵ This theory has been officially propounded since the first independent U.S.-LDC treaty was contemplated. See Letter from John F. Dulles to the President (July 9, 1956), in STAFF OF THE JOINT COMM. ON INTERNAL REVENUE TAXATION, LEGISLATIVE HISTORY OF UNITED STATES TAX CONVENTIONS 1445 (1962) (proclaiming that a treaty with Honduras would increase U.S. investment in that country because “[b]y eliminating double taxation . . . [tax treaties] have contributed much to the trade and investment flowing between [partner] countries and the United States”). For a recent restatement of the theory, see *The Japanese Tax Treaty (T. Doc. 108-14) and the Sri Lanka Tax Protocol (T. Doc. 108-9): Hearing Before the Comm. on Foreign Relations*, 108th Cong. 11 (2004) (statement of Barbara M. Angus, International Tax Council, U.S. Dep’t of Treasury) (in regards to a proposed treaty with Sri Lanka, “[t]he goal of the tax treaty is to increase the amount and efficiency of economic activity” between the partner countries).

⁶ The U.S. tax treaty network at one time included ten LDCs in Sub-Saharan Africa, pursuant to extensions of existing tax treaties with the U.K. and Belgium. Press Release, U.S. Treasury Dep’t, Treasury Dep’t Announces Termination of Extensions of Income Tax Conventions Between the U.S. and the U.K. and the U.S. and Belgium to 18 Countries and Territories (July 1, 1983). All of these treaties were subsequently terminated. *Id.* Today, the only Sub-Saharan African country with a U.S. tax treaty is South Africa. Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital Gains, U.S.-S. Afr., Feb. 17, 1997, S. TREATY DOC. NO. 105-9 (1997). The United States considers South Africa to be a developed country. See *supra* note 1. Ethiopia, Ghana, and Liberia each have a treaty with the U.S. that deals solely with the taxation of

The lack of tax treaties between the U.S. and the LDCs of Sub-Saharan Africa cannot be explained by disinterest or lack of support on the part of academics, practitioners, or lawmakers: representatives from all of these sectors have urged the importance of entering into these agreements.⁷ Neither can the omission be attributed to disinterest on the part of the LDCs in Sub-Saharan Africa themselves.⁸ Many of these nations have long pursued tax treaties with the U.S.,⁹ and a few have gone so far as to formally and publicly express their interest in commencing negotiations with the U.S.¹⁰

income from shipping and aircraft activity. Agreement to Exempt from Income Tax, on a Reciprocal Basis, Income Derived from the International Operation of Aircraft and Ships, U.S.-Eth., Oct. 30-Nov. 12, 1998, STATE DEP'T. NO. 98-183; Agreement to Exempt from Income Tax, on a Reciprocal Basis, Certain Income Derived from the International Operation of a Ship or Ships and Aircraft, U.S.-Ghana, Nov. 12, 2001, STATE DEP'T. NO. 02-01; Agreement for Reciprocal Relief from Double Taxation on Earnings from Operation of Ships and Aircraft, U.S.-Liber., July 1-Aug. 11, 1982 34 U.S.T. 1553. However, these agreements are largely unnecessary due to parallel provisions in U.S. domestic tax law. See I.R.C. § 883 (2005).

⁷ See, e.g., *The U.S.-Africa Partnership: Hearing Before the S. Comm. on Foreign Relations*, 108th Cong. (2004) (statement of Sen. Lugar) (supporting legislation that “directs the Secretary of the Treasury to seek negotiations regarding tax treaties with [AGOA] eligible countries”); Statement by Michael A. Samuels to the Subcomm. on Trade Comm. on Ways and Means (July 16, 1996), available at 1996 WL 433282 (F.D.C.H.) (“Given the vital role that investment must play in the development of African countries . . . the new policy must contain several key investment-related priorities, including an emphasis on bilateral investment and tax treaties.”); Hon. Charles B. Rangel, *The State of Africa: The Benefits of The African Growth and Opportunity Act—Next Steps* (July 14, 2003), available at 149 CONG. REC. E1464-01 (stating that the U.S. should negotiate tax treaties with AGOA countries); Calvin J. Allen, *United States Should Expand Tax Treaty Network in Sub-Saharan Africa*, 34 TAX NOTES INT’L 57, 58 (2004) (same); Karen B. Brown, *Missing Africa: Should U.S. International Tax Rules Accommodate Investment in Developing Countries?*, 23 U. PA. J. INT’L ECON. L. 45, 46, 69 (2002) (arguing for multilateral tax treaties between the U.S. and countries in Sub-Saharan Africa).

⁸ All of the LDCs in Sub-Saharan Africa are in urgent if not desperate need for foreign capital, and most are responding to the need by implementing measures to make their countries more attractive to foreign investors. See, e.g., James Gathii, *A Critical Appraisal of the NEPAD Agenda in Light of Africa’s Place in the World Trade Regime in an Era of Market Centered Development*, 13 TRANSNAT’L L. & CONTEMP. PROBS. 179 (2003). Given the powers ascribed to tax treaties in increasing trade and investment between partner countries, most LDCs would pursue the opportunity to commence negotiations with the U.S. (provided that the concessions required to secure such agreements are not too great).

⁹ For example, Nigeria began pursuing a tax treaty with the United States in 1978, after Nigeria unilaterally withdrew from its coverage under an extension of the 1945 tax treaty between the U.K. and the U.S. (as a former U.K. territory). *Nigeria to Terminate Tax Treaty with U.S., Seek Renegotiated One*, WALL ST. J., Aug. 24, 1978, at 23; see *supra* note 6 (discussing the treaty extension); I.R.S. Announcement 78-147, 1978-41 I.R.B. 20 (Oct. 10, 1978) (terminating the treaty). Although the tax treaty was apparently negotiated at length, it was never completed.

¹⁰ Calvin J. Allen, *Botswana, Burundi Wish to Negotiate Tax Treaties with United States*, 26 TAX NOTES INT’L 1264 (2002). This announcement is a rather unusual event, since tax treaties are generally commenced and negotiated in secret.

Finally, the lack of tax treaties cannot be charged to a lack of commitment on the part of the U.S. to conclude agreements that will increase trade and investment to assist in the economic growth of the countries of Sub-Saharan Africa.¹¹ The U.S. has demonstrated its commitment by making significant concessions in the context of trade and aid agreements, in the form of direct aid as well as reduced tariffs.¹²

That the lack of tax treaties cannot be explained by a lack of support or commitment on the part of scholars, policymakers, or governments suggests that there must be some other reason or reasons that tax treaties have not been concluded between the U.S. and the LDCs of Sub-Saharan Africa. This article explores many of these reasons by presenting as a case study a hypothetical tax treaty between the U.S. and Ghana, one of the LDCs of Sub-Saharan Africa.¹³ Hypothesizing the structure and operation of a tax treaty between these two countries provides a vehicle for measuring the potential effect of such a treaty on international commerce. While there has been some discussion among scholars and policymakers regarding the paucity and inefficacy of tax treaties between the U.S. and LDCs, much of the discussion has focused on abstract principles of international tax law. By examining the effects a U.S. treaty with Ghana might have on

Their existence is usually made public after negotiations have concluded and the treaty has been signed by the respective countries, pending ratification. RICHARD E. ANDERSEN & PETER H. BLESSING, ANALYSIS OF UNITED STATES INCOME TAX TREATIES ¶ 1.04[1][a][i], [ii] (2005). Thus, countries don't usually issue public proclamations regarding their desire to enter into tax treaties. Similarly, since there is little public disclosure regarding progress in treaty-making by the U.S. Treasury Department, there is little means to determine the reaction, if any, that the Treasury has had to these or other requests to initiate negotiations.

¹¹ See Richard Mitchell, *United States-Brazil Bilateral Income Tax Treaty Negotiations*, 21 HASTINGS INT'L & COMP. L. REV. 209, 225 (1997) ("[t]he United States displays eagerness to enter into tax treaties with developing nations"); Miranda Stewart, *Global Trajectories of Tax Reform: The Discourse of Tax Reform in Developing and Transition Countries*, 44 HARV. INT'L L.J. 139, 148-49 (2003) (pointing to the number of U.S. treaties with other emerging economies as evidence that "the lack of U.S. treaty-making with [LDCs in Sub-Saharan Africa] cannot be explained solely by a general reluctance to enter into tax treaties with less developed or non-capitalist countries.").

¹² The main agreements are the African Growth and Opportunity Act (AGOA), a preferential trade regime, discussed *infra* note 18, and the recently introduced Millennium Challenge Act, an aid package tied to countries' demonstrated commitment to growth through investment and trade, discussed *infra* note 19.

¹³ Ghana was chosen as a subject for this case study for several reasons, including its existing commercial ties to the U.S. These reasons are described *infra* Part III.A.

investors, this article analyzes these legal principles in the context of current global tax conditions for investment in LDCs. This case study demonstrates that in today's global tax climate, a typical tax treaty would not provide significant tax benefits to current or potential investors. Consequently, there is little incentive for these investors to pressure the U.S. government to conclude tax treaties with many LDCs.

There are of course any number of other reasons why tax treaties may not be concluded between the U.S. and the LDCs of Sub-Saharan Africa, including competing priorities for the U.S. government, either for tax treaties with other countries or for other domestic or international tax matters. Undoubtedly, socio-political factors play an important role as well.¹⁴ However, this article argues that since tax treaties with LDCs like Ghana would not provide major tax benefits to the private sector, even if concluded, these treaties would not have a significant impact on cross-border investment and trade. Accordingly, the main justification so consistently proclaimed to support the pursuit of tax treaties between the U.S. and LDCs is misguided. If the U.S. is truly committed to increasing investment and trade to the LDCs of Sub-Saharan Africa, an examination of how the global tax climate has changed since tax treaties were first implemented is in order. We must acknowledge that tax treaties cannot deliver the promised benefits, and examine the factors that prevent them from so doing.

An overview of the background and function of tax treaties and their proclaimed benefits is discussed in Part II of this article. Part III presents the case study of a hypothetical tax treaty between the U.S. and Ghana and shows that such a treaty would produce few tax benefits to current or potential investors and would therefore be largely ineffective in stimulating trade and investment between these two countries. Part IV concludes that after decades of adherence to the promise of tax treaties, we must acknowledge their failure to

¹⁴ For example, there may be national interests at stake, such as security, defense, or energy supply issues, that may contribute to the prioritization of concluding tax treaties with LDCs in other areas of the world, such as Sri Lanka (concluded in 2004) and Bangladesh (currently pending ratification). See John Venuti et al., *Current Status of U.S. Tax Treaties and International Agreements*, 34 TAX MGMT INT'L J. 653 (2005) (updating on a monthly basis the status of current U.S. tax treaties and international agreements). The various foreign policy goals that motivate the agenda for treaty-making is a subject that deserves much attention, but is beyond the scope of this article.

deliver, and search for alternative ways to achieve the goal of promoting aid through the vehicles of investment and trade.

II. BACKGROUND: TAX TREATIES, INVESTMENT, AND TRADE

This Part provides the context for a discussion of the role of tax treaties in delivering investment and aid to LDCs. Section A describes some of the strategies employed by the U.S. to assist LDCs, and how tax treaties comport with these strategies. Section B explains the role tax treaties play as the locus of international tax law by outlining the purposes and goals surrounding the origin and evolution of these agreements. Section C discusses the limitations that arise because international tax law concepts are embodied in a network of overlapping, varying, and mostly bilateral agreements between select nations. This section introduces some of the problems faced by the LDCs of Sub-Saharan Africa, which operate largely outside of this network.

A. *U.S. Strategy for Assistance to LDCs*

The U.S. has adopted a foreign aid strategy towards Sub-Saharan Africa that centers on the idea that creating investment and trade opportunities for LDCs will most effectively boost economic growth in these countries, thereby lifting them out of poverty through commercial interaction with the global community.¹⁵ A key component of this foreign aid strategy is the identification and elimination of barriers to trade and investment. Among the most significant potential barriers are double taxation, which occurs when two countries impose similar taxes on the same taxpayer in respect to the same item of income, regulatory barriers, such as currency exchange and other market controls, and tariffs. These barriers have historically been addressed in very different ways.

Regulatory barriers and tariffs have been addressed by most countries in a generally uniform manner through regional and global trade agreements.¹⁶ The main multilateral agreement is the General Agreement on Tariffs and Trade (GATT), to which 147 countries are signatories through the

¹⁵ See *supra* note 2.

¹⁶ Regulatory barriers are also addressed, to a lesser extent, in bilateral investment treaties (BITs), as discussed *infra* Part IV.E.

World Trade Organization (WTO).¹⁷ Additional tariff and regulatory barrier reduction between the U.S. and Sub-Saharan Africa has been accomplished through the African Growth and Opportunity Act (AGOA), an agreement that seeks to increase growth and alleviate poverty through the elimination of tariffs and quotas for selected imports from designated Sub-Saharan African nations.¹⁸ Another barrier reduction device is the Millennium Challenge Act of 2003 (MCA), a new official direct assistance initiative that will direct foreign aid only to countries demonstrating a commitment to poverty reduction through economic growth.¹⁹

According to the Organization for Economic Cooperation and Development (OECD),²⁰ the harmful effects of double

¹⁷ Thirty-seven of the forty-seven LDCs in Sub-Saharan Africa are members of the WTO. See the GATT agreement and accompanying agreements, *available at* Understanding the World Trade Organization, http://www.wto.org/english/thewto_e/whatis_e/tif_e/org6_e.htm (last visited Jan. 24, 2006).

¹⁸ The Trade and Development Act of 2000, Pub. L. No. 106-200, 114 Stat. 251. (codified as amended at 19 U.S.C. § 3721 (2000)) (more commonly known as the African Growth and Opportunity Act (AGOA I)), *amended by* Trade Act of 2002 Pub. L. No. 107-210 §3108, 116 Stat. 933, 1038-1040 (AGOA II), *amended by* AGOA Acceleration Act of 2004, Pub. L. No. 108-274, 118 Stat. 820 (AGOA III) [hereinafter referring to the three acts collectively as AGOA]. AGOA eliminates “competitive need limitations” (quotas) and tariffs on over 1,800 items that would otherwise be subject to such constraints under the Harmonized Tariff Schedule of the United States (unless otherwise exempt under a free trade agreement). See AGOA § 103(2) (2004); *see also* U.S. Int’l Trade Comm’n, Harmonized Tariff Schedule of the United States 67-68 (2004), *available at* <http://www.usitc.gov>; AGOA Faq, <http://www.agoa.gov/faq/faq.html> (last visited Oct. 9, 2005). AGOA is a preferential trade regime, rather than a free trade agreement. For a discussion of AGOA and other trade and aid initiatives entered into with Sub-Saharan Africa over the past several years up to 2002, see Brown, *supra* note 7, at 49-51. As of March, 2005, 36 of the 47 LDCs in Sub-Saharan Africa were eligible for AGOA benefits. For a list of currently-eligible countries, see the AGOA, Country Eligibility, http://www.agoa.gov/eligibility/country_eligibility.html (last visited Oct. 9, 2005).

¹⁹ Millennium Challenge Act of 2003, Pub. L. No. 108-199, 118 Stat. 3, 211-226; *see* S. Res. 571, 108th Cong. (2003) (enacted). For information on the MCA, see the MCA website, <http://www.mca.gov>; *see also* Colin Powell, *Welcome Message from the Honorable Colin L. Powell*, <http://www.mca.gov> (last visited Oct. 9, 2005) (stating that the MCA “reflects a new international consensus that development aid produces the best results when it goes to countries that adopt pro-growth strategies for meeting political, social and economic challenges”). The MCA is not solely directed at Sub-Saharan Africa, but approximately half of its currently identified recipient countries are located in this region. *See* Millennium Challenge Corporation: Eligible Countries, *available at* <http://www.mca.gov/countries/eligible/index.shtml> (last visited Nov. 3, 2005).

²⁰ The OECD is an international organization consisting of thirty member countries, all of which are considered by the United States to be developed countries with the nominal exception of South Korea, which the United States specifically classifies as less developed even though all OECD countries are deemed to be developed under the “developed country” listing. WORLD FACTBOOK, *supra* note 1, at 628, 639, 641. It is perhaps worthy of note that other organizations, such as the IMF,

taxation on cross-border trade and investment “are so well known that it is scarcely necessary to stress the importance of removing the obstacles that double taxation presents to the development of economic relations between countries.”²¹ The U.S. government mirrors this sentiment, identifying the eradication of “tax barriers” as a major component of its dedication “to eliminating unnecessary barriers to cross-border trade and investment.”²²

Yet, unlike other barriers to trade and investment, double taxation has not been reconciled on a global scale. Instead of a world tax organization to coordinate efforts and resolve disputes,²³ relieving double taxation remains the

diverge from the views of the United States in some of these classifications. For instance, the IMF classification of “developing countries,” while similar in most respects to the United States’ classification of LDCs, diverges by including in its list both Mexico and Turkey. *Id.* at 628. Mexico is not independently listed as a developed country under the United States’ classification system, and the Czech Republic, Hungary, and Slovakia are separately categorized as “former USSR/Eastern European” countries, but the term developed countries is defined as including all of the OECD member countries. See OECD, Ratification of the Convention on the OECD and OECD Member Countries, http://www.oecd.org/document/58/0,2340,en_2649_201185_1889402_1_1_1_1,00.html; WORLD FACTBOOK, *supra* note 1, at 628, 639, 641 (Appendix B provides a listing of LDCs that includes the “Four Dragons,” a group that includes South Korea. Country data on South Korea provides GDP and poverty statistics, available at <http://www.cia.gov/cia/publications/factbook/geos/ks.html>). The CIA still considers South Korea an LDC despite its 2004 estimated per capita GDP of \$19,200, well over the typical \$10,000 threshold separating developed from less-developed, and despite the fact that just 4% of the population is considered to be living in poverty conditions. WORLD FACTBOOK, *supra* note 1, at 304, 628, 639. In contrast, the inclusion of Mexico as a developed country is anomalous, given its per capita GDP of \$9,600. *Id.* at 365, 628. As discussed below, the OECD developed and continually updates a model income tax convention that both encapsulates and sets international tax standards.

²¹ OECD COMM. ON FISCAL AFFAIRS, MODEL TAX CONVENTION ON INCOME AND ON CAPITAL 7 (2005) [hereinafter OECD MODEL].

²² Treasury Press Release JS-1809, *supra* note 4 (“This new tax treaty relationship will serve to eliminate tax barriers to cross-border trade and investment between the two countries . . . [by providing] greater certainty to taxpayers with respect to the tax treatment of their cross-border activities and [reducing] the potential for double taxation of income from such activities.”); Press Release, U.S. Treasury Dep’t, Remarks by Treasury Secretary John W. Snow at the Signing Ceremony for the U.S.-Barbados Income Tax Protocol (July 14, 2004), available at <http://www.treas.gov/press/releases/js1786.htm> [hereinafter Treasury Press Rel. JS-1786]; see also Treasury Press Release JS-1267, Treasury Welcomes Senate Approval of New U.S.-Sri Lanka Tax Treaty (March 26, 2004), available at <http://www.treas.gov/press/releases/js1267.htm> [hereinafter Treasury Press Rel. JS-1267] (stating that the new treaty with Sri Lanka is “an important step in our ongoing efforts to broaden the reach of our tax treaty network”).

²³ See *What is the WTO?*, http://www.wto.org/english/thewto_e/whatis_e/whatis_e.htm (last visited Oct. 9, 2005) (noting that the WTO is “the only international organization dealing with the rules of trade between nations”). The several international organizations concerned with standardizing and coordinating global taxation do not approach the level of member country participation in the WTO. For

purview of individual countries.²⁴ Nevertheless, a consensus has emerged regarding the appropriate tax treatment of cross-border investment activity.²⁵ Under this consensus, double taxation is addressed primarily by tax treaties, which allocate tax revenue among jurisdictions based on concepts of residence and source.²⁶

Thus, the U.S., along with the rest of the developed world, has a network of tax treaties, spanning most of its major trading partners across the globe.²⁷ Expanding the tax treaty network has been termed by the Treasury Department as a commitment, an ongoing effort,²⁸ and the “primary means” for the elimination of tax barriers to international trade and

example, the OECD is one of the primary international organizations that concerns itself with setting standards for international taxation, but it has only 30 members, few new members are added (the latest addition was the Slovak Republic, in 2000), and many countries with rapidly growing economies, such as Brazil, Russia, India, and China, are not members. OECD, Ratification of the Convention on the OECD and OECD Member Countries, http://www.oecd.org/document/58/0,2340,en_2649_201185_1889402_1_1_1_1,00.html (last visited Jan. 12, 2006).

²⁴ The vast majority of international agreements that address the problem of double taxation are bilateral. See, e.g., Reuven Avi-Yonah, *International Tax as International Law*, 57 TAX L. REV. 483, 497 (2004) (noting that there are over 2,000 bilateral tax treaties). However, there are a few regional multilateral tax treaties currently in force, including the Andean Pact Income Tax Convention between Bolivia, Colombia, Ecuador, Peru, and Venezuela (Nov. 16, 1971); the Arab Economic Unity Council Tax Treaty between Egypt, Iraq, Jordan, Kuwait, Sudan, Syria, and Yemen (Y.A.R.) (Dec. 3, 1973); the Agreement Among the Governments of the Member States of the Caribbean Community for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion With Respect to Taxes on Income, Profits, or Gains and Capital Gains and for the Encouragement of Regional Trade and Investment between the Caribbean Community (CARICOM) countries of Antigua, Belize, Dominica, Grenada, Guyana, Jamaica, Montserrat, St. Christopher and Nevis, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago (July 6, 1994); the Tax Convention Between the Member States of the West African Economic Community (C.E.A.O.) between Burkina Faso, Côte D'Ivoire, Mali, Mauritania, Niger, and Senegal (Oct. 29, 1984); the Agreement on the Avoidance of Double Taxation on Personal Income and Property, signed by Bulgaria, Czechoslovakia, Germany (G.D.R.), Hungary, Mongolia, Poland, Romania, and the Soviet Union (still in force with respect to various successor states) (May 27, 1977); and the Convention Between the Nordic Countries for the Avoidance of Double Taxation With Respect to Taxes on Income and on Capital, between Denmark, the Faeroe Islands, Finland, Iceland, Norway, and Sweden (Sept. 23, 1996) (generally based on the OECD Model).

²⁵ See generally Reuven S. Avi-Yonah, *The Structure of International Taxation: A Proposal For Simplification*, 74 TEX. L. REV. 1301 (1996) (providing an introduction to the evolution of international taxation from decisions and compromises made by the U.S. and the League of Nations in the 1920s to the “flawed miracle” that exists today).

²⁷ See discussion *infra* accompanying notes 96 and 97.

²⁸ Treasury Press Release JS-1267, *supra* note 22.

investment.²⁹ Officials from other countries echo these sentiments.³⁰

From the perspective of LDCs, a major problem with embodying international tax laws aimed at preventing double taxation in tax treaties is that LDCs typically have few of these treaties in place. But the tax treaty network, with its central role in the evolution of international tax law, directly affects these countries regardless of their level of inclusion. To demonstrate the extent of this influence, the following Section discusses why and how tax treaties became the source of international tax law, and explores how this international tax system has impacted tax treaties between the U.S. and the LDCs of Sub-Saharan Africa.

B. Origins of Tax Treaties as International Law

Every country establishes its jurisdiction to impose income taxation under sovereign claim of right. In the U.S., the taxation of income from international transactions turns on whether the income is earned by a resident³¹ or a nonresident.³² In the case of residents, the U.S. purports to tax “all income from whatever source derived.”³³ In the case of nonresidents, the U.S. taxing jurisdiction is generally limited to income derived from investments and business activities carried out in

²⁹ Treasury Press Release JS-1809, *supra* note 4; Treasury Press Release JS-1786, *supra* note 22; *see also* Letter from Gregory F. Jenner thanking Sen. Susan M. Collins for her Comments on a Possible Chile-U.S. Tax Treaty, *U.S. Treasury Thanks Senator for Comments on Possible Chile-U.S. Tax Treaty* (Apr. 22, 2004), 2004 WTD 83-16 (“Income tax treaties can serve the important purpose of addressing tax-related barriers to cross-border trade and investment.”).

³⁰ For example, Bangladeshi officials assert that when the new treaty between the U.S. and Bangladesh enters into force, it “will encourage U.S. investment in the education, highway, and communication sectors in Bangladesh.” U.S. Treaty Update, *PwC In & Out*, 15 J. INT’L TAX’N 4-5 (Dec. 2004).

³¹ Whether individual or entity. *See* I.R.C. § 7701(a), (b) (2005).

³² *Id.*

³³ I.R.C. § 61(a) (2005) (“gross income means all income from whatever source derived”); *see also* I.R.C. §§ 1, 11(a) (2005) (imposing tax on incomes of individuals and corporations, respectively); Treas. Reg. §§ 1.1-1(b), 1.11-1(a). The authority to extend its jurisdiction in this broad fashion is confirmed by *Cook v. Tait*, 265 U.S. 47, 56 (1924):

The basis of the power to tax was not and cannot be made dependent upon the situs of the property in all cases, it being in or out of the United States, nor was not and cannot be made dependent upon the domicile of the citizen, that being in or out of the United States, but upon his relation as citizen to the United States and the relation of the latter to him as citizen.

Id.

the U.S. (known as source-based taxation).³⁴ Most developed countries similarly impose worldwide, or residence-based, income taxation on residents, and source-based taxation on income earned within their borders.³⁵ As a result, ample potential exists for double taxation of international transactions involving two developed countries.³⁶ Therefore, the U.S. and most of the other countries that impose worldwide taxation provide a foreign tax credit,³⁷ which essentially removes the residence-based layer of tax while preserving the source-based layer. Thus, the U.S. and most other countries imposing worldwide income taxation generally relieve double taxation on a unilateral basis under statutory law.

The same result is attained under treaties. Tax treaties are contracts, generally between two countries,³⁸ under which the signatory countries agree to the taxation each will impose on the activities carried out between their respective jurisdictions.³⁹ Because the U.S. unilaterally provides a

³⁴ I.R.C. §§ 871, 881-82 (2005).

³⁵ OECD countries generally impose some form of worldwide taxation, although a few (Australia, Austria, and Switzerland) provide certain statutory exemptions, and many provide for exemption under treaty, as discussed below. *See* Ernst & Young, WORLDWIDE CORPORATE TAX GUIDE 29-53, 894-910 (2005), available at [http://www.ey.com/global/download.nsf/Ireland/WorldWideCorporateTaxGuide/\\$file/WW_Corporate_Tax_guide_2005_.pdf](http://www.ey.com/global/download.nsf/Ireland/WorldWideCorporateTaxGuide/$file/WW_Corporate_Tax_guide_2005_.pdf) (describing the tax systems of, and treaty benefits provided by Australia, Austria, and Switzerland, respectively). Some countries such as France are generally source-based, or territorial systems, which generally refrain from taxing the foreign income earned by their residents. *See id.* at 240-52. However, these countries enforce worldwide taxation of certain kinds of income earned in low-tax jurisdictions in order to prevent capital flight. *Id.* Thus, France imposes worldwide taxation on certain low-taxed foreign income. *See generally id.* (providing tax system features and rates).

³⁶ The most common form of double taxation occurs when there is a residence-source overlap, as a taxpayer's country of residence (the home country) imposes residence-based tax on income earned in a foreign (source, or host) country, while the host country imposes source-based tax on the same item. Overlaps can also occur when countries have overlapping or conflicting rules for determining the source of an item of income or the residence of a taxpayer. For example, while the United States assigns corporate residence according to country of incorporation, the U.K. assigns corporate residence according to the seat of management and control. *See* I.R.C. § 7701(a)(4), (5) (2005) (assigning corporate residence to country of incorporation).

³⁷ *See generally* Ernst & Young, *supra* note 35.

³⁸ *But see supra* note 24 (noting that some treaties are multilateral).

³⁹ In the U.S., treaties have the same effect as acts of Congress, and are equivalent to any other U.S. law. U.S. CONST. art. VI, cl. 2; *see Samann v. Comm'r*, 313 F.2d 461, 463 (4th Cir. 1963); *American Trust Co. v. Smyth*, 247 F.2d 149, 152 (9th Cir. 1957). As such, they are subject to and may be overridden by subsequent revisions in domestic law ("treaty override") under the "last in time" rule of I.R.C. § 7852(d) (2005). *See Cherokee Tobacco*, 78 U.S. (11 Wall.) 616, 621 (1871) ("a treaty may supersede a prior act of Congress, and an act of Congress may supersede a prior treaty."); *Edye v. Robertson*, 112 U.S. 580, 597-600 (1884) ("A treaty, then, is a law of the land as an act

mechanism to prevent U.S. taxation in the event foreign taxation applies, treaties aimed at relieving double taxation would appear to be duplicative.⁴⁰ Treaties might seem unnecessary *ab initio*, since the U.S. provided the foreign tax credit mechanism almost immediately following the inception of the income tax itself, decades before any tax treaties were ever negotiated.⁴¹ Nevertheless, the U.S. began entering into tax treaties in 1932 and the practice continues to the present.⁴²

One of the original reasons to enter into treaties was that before they existed, there was no international standard for relieving double taxation: the U.S. was alone in providing a comprehensive foreign tax credit that unilaterally relieved

of Congress is . . . [so a] court resorts to the treaty for a rule of decision for the case before it as it would to a statute.”); *Whitney v. Robertson*, 124 U.S. 190, 194 (1888) (“a treaty is placed on the same footing, and made of like obligation If the two are inconsistent, the last one in date will control the other”); *see also* Philip F. Postlewaite & David S. Makarski, *The ALI Tax Treaty Study—A Critique and a Modest Proposal*, 52 TAX LAW. 731, 740 (1999) (arguing that treaty override is seen as a “serious problem” because it potentially places the U.S. in violation of existing international obligations); Richard L. Doernberg, *Overriding Tax Treaties: The U.S. Perspective*, 9 EMORY INT’L L. REV. 71, 131 (1995) (discussing treaty override in the U.S. and concluding that “these provisions embody an important contractual principle”: that breach of an obligation is desirable when “what is gained from the party that breaches exceeds what is lost by the party against whom the breach occurred,” thus a breach might be appropriate as long as the United States compensates the aggrieved party).

⁴⁰ *See generally* Elisabeth Owens, *United States Income Tax Treaties: Their Role in Relieving Double Taxation*, 17 RUTGERS L. REV. 428 (1963) (arguing that treaties play a relatively small role in relieving double taxation, owing to the U.S. foreign tax credit); *see also* Tsilly Dagan, *The Tax Treaties Myth*, 32 N.Y.U. J. INT’L L. & POL. 939 (2000) (showing that tax treaties are not needed to relieve double taxation, since each country would find it in its own best interest to unilaterally relieve double taxation on its citizens and residents).

⁴¹ After a brief and limited stint during the Civil War, the income tax was re-introduced in 1913. *See* STEVEN R. WEISMAN, *THE GREAT TAX WARS* 5, 278 (2002). The foreign tax credit was enacted quickly thereafter, in 1918. *See* Revenue Act of 1918, ch. 18, §§ 222(a)(1), 238(a), 240(c), Pub. L. No. 65-254, 40 Stat. 1057, 1073, 1080-82 (1919). Section 222(a)(1) was applicable to individuals, 238(a) to corporations, and 240(c) defined the taxes for which credit would be allowed.

⁴² The first U.S. tax treaty was signed with France in 1932 and entered into force on April 9, 1935. *Convention on Double Taxation, U.S.-Fr.*, Apr. 27, 1932 S. EXEC. DOC. K, 72-1 (1935). Since then, the U.S. tax treaty network has grown by an average of one treaty per year, based on the entry-in-force dates of all U.S. tax treaties ever entered into force. The most recent treaty to enter into force is with Sri Lanka. *See* U.S.-Sri Lanka Treaty, *supra* note 4 (entered into force June 13, 2004). The most recently signed is with Bangladesh, which was signed on September 26, 2004, but as of the time of publication has not yet entered into force. *See* *Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion With Respect to Taxes On Income, U.S.-Bangl.*, Sept. 26, 2004, S. TREATY DOC. NO. 109-5; *see also* Muhammad Kibria, *Bangladesh, United States Sign Tax Treaty*, 2004 WTD 188-3 (Sept. 28, 2004).

residence-based taxation.⁴³ The provision of unilateral relief of double taxation was seen as a “present of revenue to other countries,” for which the possibility of source-based taxation was preserved.⁴⁴ Other European nations, especially Italy and France, relied heavily on source-based taxation and therefore vigorously defended the U.S. position of ceding residence-based taxation to that of source.⁴⁵ In stark contrast, Britain imposed worldwide taxation and provided a foreign tax credit that was extremely limited and generally preserved its residence-based taxation.⁴⁶

The conflicting views of the U.S. and the U.K. regarding the proper method for relieving double taxation prompted several years of debate out of which a consensus emerged in the early 1920s.⁴⁷ Under this consensus, “personal taxation” was to be preserved for residence-based taxation, and “impersonal taxation” was to be preserved for source.⁴⁸ How these terms would be defined and implemented in the context of the then vastly differing tax systems depended on long and

⁴³ See Michael J. Graetz & Michael M. O’Hear, *The “Original Intent” of U.S. International Taxation*, 46 DUKE L. J. 1021, 1023 (1996); H. David Rosenbloom & Stanley I. Langbein, *United States Tax Treaty Policy: An Overview*, 19 COLUM. J. TRANSNAT’L L. 359 (1981).

⁴⁴ EDWIN R. A. SELIGMAN, DOUBLE TAXATION AND INTERNATIONAL FISCAL COOPERATION, 132, 135 (1928). Source-based taxation was even enhanced to the extent the foreign country’s tax rates were lower than that of the U.S. In such cases, foreign countries could raise their tax rates to the U.S. level with the assurance that these taxes would be creditable in the U.S., leaving the investor indifferent as to the higher foreign rate. See RICHARD E. CAVES, MULTINATIONAL ENTERPRISE AND ECONOMIC ANALYSIS 190 (1996) (“Neutrality depends on who pays what tax, not which government collects it.”).

⁴⁵ Graetz & O’Hear, *supra* note 43, at 1072.

⁴⁶ Britain’s view was supported by the Netherlands. See Ernst & Young, *supra* note 35, at 631-32. Both countries were primarily capital-exporting nations, and thus the importance of preserving residence-based taxation was high. The U.S. was also a capital-exporting nation at the time, but arguably regarded source-based taxation as having the superior claim. Graetz & O’Hear, *supra* note 43, at 1046.

⁴⁷ Discussions began in the newly formed International Chamber of Commerce (ICC) in 1920. In 1921 the ICC adopted a resolution that taxing jurisdiction turned on the nature of the tax, with distinctions being made between “super” and “normal” taxes. However, the U.S. rejected this resolution and endorsed closer adherence to the U.S. system, with exceptions made for particular kinds of income, including that from international shipping (as to which residence-based taxation was to be preserved) and that from sales of manufactured goods (to be apportioned under formula). The ICC synthesized the views of the U.S. and fourteen other countries and produced a new resolution in Rome, in 1923. The League of Nations began to take over the discussions in 1923, using the Rome resolutions as a basis for discussion. The compromise of the ICC as to “super” and “normal” taxes resurfaced in League of Nations discussions. See *id.*, at 1067-70; Mitchell B. Carroll, *International Tax Law: Benefits for American Investors and Enterprises Abroad*, 2 INT’L LAW. 692, 696 (1968).

⁴⁸ Graetz & O’Hear, *supra* note 43, at 1080.

contentious negotiations, held under the auspices of the League of Nations, in which the U.S. played a large part.⁴⁹

Ultimately, the League of Nations promulgated a model tax treaty under which countries would reciprocally restrict source-based taxation of passive income items, such as dividends and interest, in favor of preserving residence jurisdiction over these items,⁵⁰ and reciprocally relieve residence-based taxation on foreign-source business income, as had been done unilaterally by the U.S. through the foreign tax credit.⁵¹ By subsequently entering into tax treaties following the League of Nations model, the U.S. retreated from its position of unilaterally providing foreign tax credits. The tax concessions thereby obtained from treaty partners reduced the revenue cost of the foreign tax credit, which had been the main goal of U.S. involvement in first negotiating these instruments.⁵²

The concepts embodied in the League of Nations model treaty evolved into a model treaty developed by the OECD in 1963, which has been updated periodically since then (the OECD Model).⁵³ The OECD Model has become the standard upon which most of the over 2,000 tax treaties currently in force are based.⁵⁴ Following the League of Nations and OECD standards, tax treaties minimize source-based taxation of income derived from passive investment activity, such as

⁴⁹ See Carroll, *supra* note 47, at 693, 698 (stating that in the early 1920s the U.S. had been invited by the League of Nations to participate in forming tax treaty policy, but the Department of State had not responded because of the Senate's rejection of membership in the League (by virtue of its failure to consent to ratification of the Treaty of Versailles). Nevertheless, interest in tax treaties grew in the U.S. and the League planned subsequent Committee meetings to "facilitate attendance by Americans.").

⁵⁰ Graetz & O'Hear, *supra* note 43, at 1086-87 (citing Britain's strong role in producing this result); Avi-Yonah (1996), *supra* note 25, at 1306.

⁵¹ See Graetz & O'Hear, *supra* note 43, at 1023. The League of Nations first produced a model treaty in 1927. See Carroll, *supra* note 47, at 698.

⁵² See Carroll, *supra* note 47, at 693-94 (interest in pursuing tax treaties grew because these instruments "would reduce the amount of foreign taxes that could be credited against the United States tax . . . and possibly leave something for the Treasury to collect.").

⁵³ The OECD Model was itself based on a series of model treaties promulgated by the League of Nations. It has since been updated several times to cope with the changing nature of business, culminating with the most recent update on February 1, 2005. Unless otherwise noted, references in this article to the OECD Model refer to the 2005 version, which is available at <http://www.oecd.org>. See OECD MODEL, *supra* note 21.

⁵⁴ Compiled in February 2005 from Ernst & Young, *supra* note 35, and the LexisNexis Tax Analysts Worldwide Tax Treaties database, <http://w3.nexis.com/sources/scripts/info.pl?250064> (last visited Nov. 11, 2005).

dividends, interest and royalties, while preserving residence-based taxation of these items. Once activities increase to a sufficiently significant level of engagement, however, source-based jurisdiction again takes precedence.⁵⁵

As a member of the OECD, the U.S. participated in the development of the OECD model, but also developed its own model to reflect specific policies (the U.S. Model).⁵⁶ First published in 1977 and most recently updated in 1996, the U.S. Model is based on the OECD Model in most respects.⁵⁷ One notable difference between the models, however, is that the OECD Model allows for the alleviation of double taxation either via a foreign tax credit or by providing that the residence country will exempt the income earned in the source country (known as the exemption method).⁵⁸ The U.S. Model, in keeping with its historical preference to impose worldwide taxation and alleviate double taxation via the foreign tax credit mechanism, allows only the credit method.⁵⁹ All modern U.S. tax treaties are based on the U.S. Model, with modifications made to reflect changes in law or policy since the release of the latest model.⁶⁰ The consensus forged through the original

⁵⁵ The required level of engagement is defined as a “permanent establishment” as discussed *infra* Part II.C.2.

⁵⁶ See U.S. MODEL INCOME TAX CONVENTION OF SEPT. 20, 1996, available at <http://www.treas.gov/offices/tax-policy/library/model996.pdf> [hereinafter U.S. MODEL]; U.S. MODEL INCOME TAX CONVENTION OF SEPT. 20, 1996: TECHNICAL EXPLANATION, available at <http://www.irs.gov/pub/irsttry/usmtech.pdf>.

⁵⁷ The Joint Committee on Taxation compares provisions of both the U.S. and OECD models when analyzing and describing new tax treaties entered into by the U.S. See, e.g., George Yin, Chief of Staff, Joint Comm. on Taxation, Testimony of the Staff of the Joint Committee on Taxation before the Senate Comm. on Foreign Relations Hearing on the Proposed Tax Treaties with Japan and Sri Lanka (Feb. 25, 2004) (explaining the use of the U.S. and OECD models in treaty negotiations and describing ways in which the new Japan-U.S. Treaty deviates from each model), available at <http://www.house.gov/jct/x-13-04.pdf>.

⁵⁸ OECD MODEL, *supra* note 21, arts. 23A (exemption method), 23B (credit method). For example, among OECD countries, Belgium, Denmark, Finland, Germany, and Poland have treaties in which they completely relinquish their residual taxation of income derived by a permanent establishment. See generally Ernst & Young, *supra* note 35. For a recent example, see the Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and on Capital, Belg.-Ecuador, Dec. 18, 1996, 2248 U.N.T.S. 676 (entered into force Mar. 18, 2004).

⁵⁹ See U.S. MODEL, *supra* note 56, art. 23.

⁶⁰ A revised U.S. Model is apparently forthcoming from the Treasury Department. It was originally scheduled for release in December 2004. See Kevin A. Bell, *New Model Treaty Won't Provide for Zero Dividend Withholding*, 2005 TNT 70-7 (Apr. 13, 2005); Lee A. Sheppard, *Angus Talks Treaty Policy*, 2004 TNT 232-3 (Dec. 2, 2004) (stating that Treasury will issue an updated model treaty to reflect clauses in recently negotiated treaties).

model treaties has remained constant: in general, residence-based, or worldwide taxation is accorded primary status in the case of dueling tax jurisdictions, with treaties serving to set the limited boundaries within which source-based taxation will continue to take precedence.

Residence-based, or worldwide income taxation is typically justified on the grounds that it promotes capital export neutrality, an efficiency principle dictating that taxpayers will not differentiate on tax grounds between locating activities domestically or abroad on tax grounds, since in either case the income generally will be subject to tax at the same rate.⁶¹ Thus, if taxation is imposed by a source country, the U.S. as home country generally provides the foreign tax credit against the U.S. tax imposed on the same item of income, leaving the U.S. investor in the same tax position as if the investment had been subject only to domestic tax.⁶²

However, most countries, including the U.S., do not completely adhere to principles of capital export neutrality, regardless of the existence of tax treaties. Because the U.S. generally does not tax the foreign income of foreign companies, it is a relatively simple matter to avoid U.S. tax on much foreign income by placing the income stream in a foreign

⁶¹ See generally PEGGY MUSGRAVE, UNITED STATES TAXATION OF FOREIGN INVESTMENT INCOME: ISSUES AND ARGUMENTS (1969). The concept of capital export neutrality and its converse, capital import neutrality, were first developed by Peggy Musgrave in 1969 and they have been vigorously analyzed and debated ever since. For an overview of these norms, and an argument that capital export neutrality is generally the best principle for international taxation of both portfolio and direct investment, see Avi-Yonah, *infra* note 164, at 1604. See also STAFF OF JOINT COMM. ON TAXATION, 108TH CONG., BACKGROUND MATERIALS ON BUSINESS TAX ISSUES PREPARED FOR THE HOUSE COMMITTEE ON WAYS AND MEANS TAX POLICY DISCUSSION SERIES 53-54 (JCX-23-02) (Comm. Print 2002) (arguing that a worldwide tax system promotes economic efficiency, because investment location decisions will be governed by business considerations rather than tax considerations, and equity, because domestic and multinational activities are treated alike, and suggesting that worldwide taxation in some form is requisite to preserve the tax base from erosion by flight of activities to tax havens); CAVES, *supra* note 44, at 190 (stating that all relevant taxes taken together are neutral if domestic and overseas investments that earn the same pre-tax return also yield the same after-tax return).

⁶² If tax credits perfectly offset foreign taxes paid, the taxpayer is indifferent to the allocation of the tax. See CAVES, *supra* note 44, at 190. Most foreign tax credit systems are not perfectly offsetting but impose limitations as to creditability of taxes based on type or source of income and amount paid relative to domestic tax otherwise imposed. In the U.S., foreign taxes are currently segregated among several baskets according to the type of income that gave rise to the tax for purposes of applying a limit on the allowable tax credit. I.R.C. §§ 901-904 (2005). As a result, pooling of income from low-tax countries may be advantageous to taxpayers who have paid foreign taxes in excess of the allowable tax credit. See, e.g., David R. Tillinghast, *Tax Treaty Issues*, 50 U. MIAMI L. REV. 455, 477 (1996).

entity.⁶³ In so doing, U.S. persons may defer U.S. taxation until the foreign earnings are repatriated in the form of dividends or capital gains.⁶⁴

Deferral of this kind is the equivalent of a statutorily optional exemption of foreign income from U.S. taxation, as U.S. tax can be suspended indefinitely, according to the needs and desires of the shareholders.⁶⁵ Thus, deferral allows taxpayers to convert U.S. residence-based taxation to source-based taxation when it suits their purposes.⁶⁶ To protect revenues, the U.S. has responded with a series of anti-deferral rules to prevent the easy escape of capital to foreign jurisdictions.⁶⁷ To date, these anti-deferral measures have

⁶³ See, e.g., Julie A. Roin, *United They Stand, Divided They Fall: Public Choice Theory and the Tax Code*, 74 CORNELL L. REV. 62, 113 (1988) (discussing the ease of avoiding U.S. tax through foreign entities); Avi-Yonah, *supra* note 25, at 1324-25 (arguing that as a result of the distinction between foreign and domestic companies in I.R.C. § 7701(a)(4) and (5) (2005) and the ensuing difference in taxation under I.R.C. §§ 11(d), 881, and 882 (2005), “taxpayers can easily choose between classification as foreign or domestic according to the formal jurisdiction of their incorporation”).

⁶⁴ Deferral is limited to some extent, as discussed *infra* Part III.B. However, a U.S. person that earns active foreign income through a foreign corporation is generally not subject to U.S. tax until profits are repatriated as a dividend or the stock is sold, under the rules of Subpart F, I.R.C. §§ 951-964.

⁶⁵ To allow deferral is therefore to provide incentives for active business operations to be located outside of the U.S., in low-tax jurisdictions. See Robert J. Peroni, *Back to the Future: A Path to Progressive Reform of the U.S. International Income Tax Rules*, 51 U. MIAMI L. REV. 975, 987 (1997) (arguing that deferral “undercuts the fairness and efficiency of the U.S. tax system” by allowing profits earned overseas in low-tax jurisdictions to escape tax while equivalent domestic activities would be subject to tax). As a tax expenditure that costs the U.S. approximately \$7.5 billion per year, deferral may be viewed as a subsidy, or tax incentive, for foreign business activities. See OFFICE OF MGMT. & BUDGET, EXECUTIVE OFFICE OF THE PRESIDENT, ANALYTICAL PERSPECTIVES: BUDGET OF THE UNITED STATES GOVERNMENT FISCAL YEAR 2005, at 287, available at <http://www.whitehouse.gov/omb/budget/fy2005/pdf/spec.pdf>. Capital gains may be avoidable in the context of a conversion or liquidation of a subsidiary. See *Dover Corp. v. Comm’r*, 122 T.C. 324, 338, 353 (2004) (allowing the conversion of a foreign corporate subsidiary to disregarded entity status to avoid creation of subpart F income on its subsequent sale). However, the IRS disagrees with this conclusion. See I.R.S. Chief Couns. Tech. Adv. Mem. 199937038 (Sept. 17, 1999), available at <http://www.irs.gov/pub/irs-wd/9937038.pdf> (holding that proceeds from sale of subsidiary after change in classification to disregarded entity did not escape subpart F); I.R.S. Chief Couns. Field Serv. Adv. Mem. 200049002 (Dec. 8, 2000), available at <http://www.irs.gov/pub/irs-wd/0049002.pdf>; I.R.S. Chief Couns. Field Serv. Adv. Mem. 200046008 (Aug. 4, 2000), available at <http://www.irs.gov/pub/irs-wd/0046008.pdf> (same, with sale made to related party).

⁶⁶ See Peroni, *supra* note 65, at 987.

⁶⁷ See, e.g., S. REP. NO. 99-313, at 363 (1986) (“[I]t is generally appropriate to impose current U.S. tax on easily movable income earned through a controlled foreign corporations since there is likely to be limited economic reason for the U.S. person’s use of the foreign corporation . . .”). In practice, current taxation applies to a significantly lesser extent than is contemplated under the subpart F rules, as these rules are apparently “not fully effective in meeting their objectives.” Harry Grubert, *Tax*

largely been restricted to passive income items so that deferral is still available for active income (residual taxation of which the U.S. might forego, under the foreign tax credit, if foreign taxes are in fact imposed).

Despite the significance of deferral in curtailing the imposition of worldwide income taxation, the concept of residence-based taxation is the default system of most developed countries. The protection of residence-based taxation, by scaling back the need for foreign tax credits, was (and is) given as a reason—perhaps the primary reason—for entering into tax treaties. The OECD Model, as the baseline for the majority of the world's tax treaties, thus represents an international consensus that the appropriate jurisdiction to tax income arising from cross-border activity is primarily the residence jurisdiction.⁶⁸ This consensus, however, has not eliminated the limitations inherent in using tax treaties as the primary mechanism for the international coordination of tax matters.

C. *Limitations on the Use of Treaties as International Tax Law*

Treaties are the traditional mechanism used for relieving double taxation on cross-border activity. However, they have several significant limitations which render them an inefficient and unsatisfactory means of achieving their goals. This Section discusses some of these limitations, including the incomplete coverage and restricted scope of tax treaties, their lack of uniformity, and their reliance on the assumption of reciprocal capital flows, and therefore reciprocal tax regimes, among contracting states.

Planning by Companies and Tax Competition by Governments: Is There Evidence of Changes in Behavior?, in INTERNATIONAL TAXATION & MULTINATIONAL ACTIVITY 113, 137 (James R. Hines, Jr., ed. 2001) (less than 50% of after-tax income of subsidiaries located in three Caribbean tax havens was subject to current tax under subpart F); see also Robert J. Peroni et al., *Getting Serious About Curtailing Deferral of U.S. Tax on Foreign Source Income*, 52 SMU L. REV. 455, 464 (1999) (“[A]nti-deferral provisions can be readily circumvented . . .”). For a discussion of the deferral privilege and its inconsistency with U.S. international tax principles including the norm of capital export neutrality, see Peroni, *supra* note 65.

⁶⁸ See Avi-Yonah, *supra* note 25, at 1303 (stating that a “coherent international tax regime exists that enjoys nearly universal support”); Reuven S. Avi-Yonah, *International Taxation of Electronic Commerce*, 52 TAX L. REV. 507, 509 (1999) (arguing that the worldwide network of tax treaties constitutes an international tax regime with definable, common principles).

1. Limited Coverage, Scope, and Uniformity

Not all countries have tax treaties, and no country has tax treaties with all the other countries of the world. The average individual tax treaty network comprises just 17 treaty partners, and over half of all countries have tax treaty networks of five or fewer treaty partners.⁶⁹ In addition, the benefits of treaties are typically limited to activities conducted between the two signatory countries.⁷⁰ As a result, there would have to be over 32,000 bilateral tax treaties to cover every possible cross-border transaction.⁷¹ The U.S. would have to enter into new treaties with over 160 countries to ensure that its coverage spanned the globe.⁷² At its current average rate of expansion of one new treaty per year since its first treaty was concluded with France in 1935, the prospect of completing a universal U.S. tax treaty network in a timely fashion appears slight.⁷³

In addition, the OECD Model is aimed at only income taxation, to the exclusion of other kinds of taxes.⁷⁴ Thus the

⁶⁹ About 30% of countries have no tax treaties in force. For the 35 countries considered by the U.S. to be developed, the average network is about 49 treaties; for OECD countries, the average is 60. For less developed countries, the average is 8. Compiled in February 2005 from Ernst & Young, *WORLDWIDE CORPORATE TAX GUIDE* (2004) and the LexisNexis Tax Analysts Worldwide Tax Treaties database, *supra* note 55.

⁷⁰ This is almost universally true when the U.S. is a party. *See* U.S. MODEL, *supra* note 56, art. 22, at 31-33.

⁷¹ This figure is based on the assumption that there are approximately 255 independent nations in the world today—a figure that is an estimate because sovereignty of nations is a matter of foreign policy that varies from nation to nation. A currently prominent example is the case of Taiwan. *See, e.g., Chen Redux: Inside the Rhetoric, There are Hints of a Thaw All Round*, *THE ECONOMIST*, May 22, 2004, at 37 (discussing China's tight grip and world response). *See also* *WORLD FACTBOOK*, *supra* note 1, at 610-13 (country data on Taiwan), available at <http://www.cia.gov/cia/publications/factbook/geos/tw.html>.

⁷² The United States currently has 56 comprehensive income tax treaties in force which cover 64 countries. *See* John Venuti et al., *Current Status of U.S. Tax Treaties and International Agreements*, *supra* note 14 (listing all countries covered by tax treaties). The United States formally recognizes a total of 233 nations. *See* *World Factbook* at 628, 630, and 639 (acknowledging the existence of 34 developed countries, 27 former USSR/Eastern European countries, and 172 less developed countries).

⁷³ Compiled by averaging the first entry-in-force dates of all comprehensive U.S. income tax treaties ever in force (on file with author).

⁷⁴ For reasons owing to historical distinctions that may be less clear today, income taxes have generally been attended to in tax treaties, while trade taxes are addressed in trade agreements. *See generally* Reuven S. Avi-Yonah & Joel Slemrod, *Treating Tax Issues Through Trade Regimes*, 26 *BROOK. J. INT'L L.* 1683 (2001); Paul R. McDaniel, *Trade and Taxation*, 26 *BROOK. J. INT'L L.* 1621 (2001); Alvin C. Warren, *Income Tax Discrimination Against International Commerce*, 54 *TAX L. REV.* 131 (2001).

term “double taxation” refers more particularly to double income taxation, and the term “relief of double taxation” refers particularly to the alleviation of circumstances in which two countries assert income taxation on the same item of income.⁷⁵ Yet, there are a number of other taxes applied on businesses and individuals. Increasingly prominent throughout the world are consumption and trade taxes, and, primarily in developed countries, social security and other payroll taxes. As these taxes increase in application, tax treaties may cover a shrinking portion of revenues collected by countries.

Finally, as contracts forged through negotiation, individual treaties deviate to various degrees from the standards set in the OECD Model.⁷⁶ Treaties among OECD member countries generally adhere to the pattern and main provisions of the OECD Model.⁷⁷ Treaties between developed

⁷⁵ The OECD Model describes double taxation as “the imposition of comparable taxes in two (or more) states on the same taxpayer in respect of the same subject-matter and for identical periods.” OECD MODEL, *supra* note 21, at 7.

⁷⁶ Even if their language is similar or identical, tax treaties may also vary due to differing interpretations under the domestic law of each country, or, in the case of U.S. treaties, pursuant to the agreement of the competent authorities. This is authorized under art. 3, ¶ 2 of the OECD, US, and UN Models, which state that any term not defined in the treaty is defined under the laws of each country as of the time the treaty is applied—i.e., “internal law, as periodically amended.” Postlewaite & Makarski, *supra* note 39, at 741 (adding that “[w]hen countries take different approaches to treaty interpretation, serious consequences may result, such as double taxation or the avoidance of any taxation.”). The U.S. Model adds, “or the competent authorities agree to a common meaning pursuant to the provisions of Article 25 (the Mutual Agreement Procedure).” U.S. MODEL, *supra* note 56, art. 3, ¶ 2. Variation among treaties is also authorized under Article 25 of the OECD, US, and UN Models, which states that the competent authorities “shall endeavor to resolve by mutual agreement any difficulties or doubts arising as to the interpretation or application” of the treaty, and that the competent authorities “may also consult together for the elimination of double taxation in cases not provided for” in the treaty. U.S. MODEL, *supra* note 56, art. 25, ¶ 3; OECD Model, *supra* note 21, art. 25, ¶ 3; UN Model, *infra* note 78, art. 25, ¶ 3. The U.S. Model adds that “[t]he competent authorities also may agree to increases in any specific dollar amounts . . . to reflect economic or monetary developments.” U.S. MODEL, *supra* note 56, art. 25, ¶ 4. Finally, treaties may deviate from the international consensus even if they closely follow the model treaties due to periodic updates to the models and commentary thereto. For example, recent revisions to the OECD Model commentary with respect to the definition of a permanent establishment potentially broadens the scope of such provisions and may ultimately lead to a revision of Article 5 of the OECD Model. See, e.g., Richard M. Hammer, *The Continuing Saga of the PE: Will the OECD Ever Get it Right?*, 33 TAX MGMT. INT’L J. 472 (2004) (suggesting that the current commentary should be revised because it is “murky and ambiguous,” and arguing for the incorporation of a clear de minimus rule in the OECD Model itself).

⁷⁷ See OECD MODEL, *supra* note 21, at 10. However, improvements and advances in international business and tax practices contribute to increased deviation even among OECD countries. Recently, so-called “double non-taxation” provisions have been introduced in new treaties. These provisions directly contravene existing

and less-developed countries, however, often contain non-standard provisions. These provisions generally derive from a third model tax convention, first promulgated by the United Nations in 1980 (the UN Model). The UN Model was the product of a series of discussions and meetings of an Ad Hoc Group of Experts formed in 1967⁷⁸ to address concerns that the OECD Model (and, by association, the U.S. Model) was not appropriate for tax treaties involving non-reciprocal cross border activity.⁷⁹

2. Assumption of Reciprocal Activity

The U.S. and OECD Models are directed at and work most effectively between two nations that export capital and transfer services in roughly reciprocal amounts. When treaty countries export and import capital to each other, each acts as a source country to investors from the other. Under these circumstances, tax treaties coordinate taxation without necessarily causing an imbalance in revenue allocation between the two countries: revenues given up by countries in their “source” role are recouped in their “residence” role.⁸⁰ Consequently, such treaties are expected to have little revenue effect on either country.⁸¹

OECD provisions. See, e.g., Michael Lang, *General Report*, in INT'L FISCAL ASSOC., DOUBLE NON-TAXATION, 89a CAHIERS DE DROIT FISCAL INTERNATIONAL 77 (2004).

⁷⁸ The Group of Experts included members from Latin American, North American, African, Asian, and European countries. The group also had observers from the IMF, the International Fiscal Association, the OECD, the Organization of American States, and the International Chamber of Commerce. See UNITED NATIONS, COMMENTARY ON THE ARTICLES OF THE 1980 UNITED NATIONS MODEL DOUBLE TAXATION CONVENTION BETWEEN DEVELOPED AND DEVELOPING COUNTRIES 2 (Jan. 1, 1980); see also UNITED NATIONS DEPT OF ECONOMIC AND SOCIAL AFFAIRS, UNITED NATIONS MODEL DOUBLE TAXATION CONVENTION BETWEEN DEVELOPED AND DEVELOPING COUNTRIES viii (2001) [hereinafter UN MODEL].

⁷⁹ See Leif L. Mutén, *Double Taxation Conventions Between Industrialised and Developing Countries*, in DOUBLE TAXATION TREATIES BETWEEN INDUSTRIALISED AND DEVELOPING COUNTRIES; OECD AND UN MODELS, A COMPARISON 3 (Kluwer Law and Tax'n Pubs. 1990).

⁸⁰ For example, while the U.S. may give up revenue by refraining from taxing dividends paid to foreign persons under a treaty, it recoups the loss by collecting the full tax on dividends paid by the foreign country to U.S. residents (without reduction under the foreign tax credit provisions, since under the treaty, the foreign country does not tax the dividend). See I.R.C. §§ 61 (U.S. persons taxed on income from whatever source derived) and 901 (foreign tax credit generally allowed only when foreign tax has been paid or accrued).

⁸¹ See, e.g., STAFF OF THE S. COMM. ON FOREIGN REL., 105TH CONG., REPORT ON THE TAX CONVENTION WITH IRELAND 17 (Comm. Print 1997) (“The proposed treaty is estimated to cause a negligible change in . . . Federal budget receipts.”); STAFF OF THE S. COMM. ON FOREIGN REL., 108TH CONG., REPORT ON THE TAX CONVENTION WITH THE

If instead the flow of capital moves primarily from one country to another, reciprocity is lost. One country becomes primarily the source, or host country, while the other becomes primarily the residence, or home country. Because LDCs are typically capital importing countries, their primary role under tax treaties is as a source country.⁸² Residence jurisdiction will therefore be minimally exercised by LDCs.⁸³ In such cases, a tax treaty shifts tax revenues inversely to the flow of capital. As a result, while the contraction of taxing jurisdictions is technically reciprocal in the treaty document, the one-sided

UNITED KINGDOM 16, 17 (Comm. Print 2003) (same). The balance apparently holds even in the case of complete exemption of source-country taxation. *See, e.g.*, STAFF OF THE JOINT COMM. ON TAXATION, 108TH CONG., EXPLANATION OF PROPOSED PROTOCOL TO THE INCOME TAX TREATY BETWEEN THE UNITED STATES AND AUSTRALIA 39 (Comm. Print 2003) (suggesting that the new zero-rate for tax on direct dividends “would provide immediate and direct benefits to the United States as both an importer and an exporter of capital[,]” and that “[t]he overall revenue impact of this provision is unclear, as the direct revenue loss to the United States as a source country would be offset in whole or in part by a revenue gain as a residence country from reduced foreign tax credit claims with respect to Australian withholding taxes”).

⁸² The flow of capital between the U.S. and an LDC typically originates from the former and flows to the latter, although this is less true with respect to the “advanced developing” countries: Hong Kong, Korea, Singapore, Taiwan, and Brazil. *See, e.g.*, Yoram Margalioth, *Tax Competition, Foreign Direct Investments and Growth: Using The Tax System to Promote Developing Countries*, 23 VA. TAX REV. 161, 198 (2003) (stating that LDCs are generally not typical destinations for portfolio investment); *see also* Conventions and Protocols on Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital; Treaty Doc. 103-29, Sweden; Treaty Doc 103-30, Ukraine; Treaty Doc. 103-31, Mexico; Treaty Doc. 103-32, France; Treaty Doc. 103-33, Kazakhstan; Treaty Doc. 103-34, Portugal; Treaty Doc. 104-4, Canada: Hearing Before the S. Comm. on Foreign Relations, 104th Cong. 18 (1995) (statement of Leslie B. Samuels, Assistant Secretary for Tax Policy, U.S. Dep’t of the Treasury) (capital flows are typically nonreciprocal between the U.S. and LDCs). Most multinationals are residents of developed countries. Of the top 100 multinational companies (as measured by foreign assets), just five are residents in LDCs (Hong Kong, Korea, Malaysia, Mexico, and Venezuela). United Nations Conference on Trade and Dev. [UNCTAD], *World’s 100 Non-financial TNCs, Ranked By Foreign Assets, 2000*, <http://www.unctad.org/templates/Download.asp?docid=3812&lang=1&intItemID=2443> [hereinafter UNCTAD World 100 Non-Financial TNCs] (last visited Nov. 11, 2005). Of the top fifty multinational companies from developing economies, none are based in the LDCs of Sub-Saharan Africa. UNCTAD, *The Top 50 TNCs from developing economies, ranked by foreign assets, 2000*, <http://www.unctad.org/templates/Download.asp?Docid=3811&lang=1> (last visited Nov. 11, 2005).

⁸³ It may be minimally exercised even in the absence of treaties, since few LDCs in Sub-Saharan Africa assert worldwide taxation on their residents. Among the exceptions are Angola, Ethiopia, Lesotho, Mauritius, Mozambique, Nigeria, Tanzania, and Uganda. *See generally* Ernst & Young, *supra* note 35. Ghana, the subject of the case study presented in Part III of this Article, generally exercises territorial taxation but imposes tax on certain repatriated earnings. *See* Republic of Ghana, Internal Revenue Act, 2000, Act 592, Part III, Div. I, § 6(1)(a) [hereinafter G.I.R.A.] (residents’ assessable income includes that “accruing in, derived from, brought into, or received in Ghana”).

flow of capital towards the LDC as source-country ensures that only that country experiences a true contraction of its taxing jurisdiction. The provider of the capital, namely the developed country, preserves its rights as the country of residence just as if the treaty had never been concluded.

Non-reciprocal contraction by the LDC occurs in the context of portfolio investment as its role as the source country requires it to reduce its tax rates on dividends, interest, and royalties, while the residence country preserves the right to impose full taxation on these items. Non-reciprocal contraction also occurs in the context of active business income, as threshold rules for taxing business income prevent source-country taxation of certain activities, such as storing and displaying goods or building and construction activities.⁸⁴ These threshold rules are embodied in the concept of the “permanent establishment.”

The permanent establishment rules are found in Article 5 of each of the US, OECD, and UN model treaties. Under these rules, the source country agrees to refrain from taxing business income unless it is attributable to business activities that meet physical presence requirements, and even then, in some cases, only if the activities are conducted for a given duration or rise to a substantial enough level.⁸⁵ Accordingly, under the U.S. and OECD Models, a permanent establishment is generally deemed to exist and therefore create taxing jurisdiction in the source country if business activities are conducted through a fixed place of business and consist of more than “peripheral or ancillary activities.” Certain activities, such as building and construction, however, must last more than a year in order to be deemed “permanent establishments.”⁸⁶

Responding to the non-reciprocal aspects of relationships between developed and less developed countries, the UN Group of Experts sought to preserve source-country taxation in tax treaties in its Model. Thus, the UN Model provides for lower thresholds by shortening duration and

⁸⁴ See U.S. MODEL, *supra* note 56, art. 5; OECD MODEL, *supra* note 21, art. 5; UN MODEL, *supra* note 78, art. 5.

⁸⁵ *Id.*

⁸⁶ See U.S. MODEL, *supra* note 56, art. 5, ¶ 3. Peripheral and ancillary activities include exploratory or preparatory functions such as research and development, as well as activities considered incidental to the economic source of the income, such as storage, display, or delivery of goods. The U.S. Model is virtually identical to the OECD Model.

presence requirements and including certain activities not included in the OECD and U.S. Models.⁸⁷ For example, under the UN Model, a permanent establishment may arise after a duration of as low as six months for certain activities,⁸⁸ fewer ancillary activities are excluded,⁸⁹ and more income is attributed to permanent establishments via a force of attraction rule.⁹⁰ Nevertheless the UN Model limits source-country taxation simply by using the permanent establishment concept at all. In the absence of the treaty, the source country would typically provide little or no threshold to taxation.⁹¹

In addition, the UN Group of Experts determined that in treaties between developed and less developed countries,

⁸⁷ It otherwise adheres in large part to the OECD Model, and the two have become more similar. Indeed, the relevance of the UN Model has diminished significantly and it may be seen as irrelevant to the extent developed countries agree to higher source-based tax in their tax treaties, which they have done to a significant extent. See, e.g., John F. Avery Jones, *Are Tax Treaties Necessary?*, 53 TAX L. REV. 1, 2 (1999) ("There seems [to be] little need for a separate model for developing countries.").

⁸⁸ UN MODEL, *supra* note 76, art. 5, ¶ 3. In paragraph 3(a), building and construction activities and related supervisory activities are a permanent establishment if they last more than six contiguous months; in paragraph 3(b), consulting services are a permanent establishment if such services continue for a cumulative (even if non-contiguous) six months. In the OECD model, building and construction activities must continue for more than twelve months to constitute a permanent establishment, related supervisory activities are not included, and there is no parallel provision regarding consulting services. For a comparison of the OECD and UN Model permanent establishment provisions, see Bart Kusters, *The United Nations Model Tax Convention and Its Recent Developments*, ASIA-PACIFIC TAX BULLETIN, January/February 2004, at 4, available at <http://unpan1.un.org/intradoc/groups/public/documents/other/unpan014878.pdf>.

⁸⁹ For example, in the OECD and U.S. Models, the use of facilities or maintenance of a stock of goods for delivery is specifically excluded from the definition of permanent establishment, while in the UN Model it is not. Compare U.S. MODEL, *supra* note 56, art. 5, ¶ 4, and OECD MODEL, *supra* note 21, art. 5, ¶ 4, with UN MODEL, *supra* note 78, art. 5, ¶ 4.

⁹⁰ The OECD and U.S. Models provide source-country taxation only of profits that are attributable to the permanent establishment. The UN Model includes profits attributable to the sale of the same or similar goods or merchandise as those sold through the permanent establishment and profits from the same or similar business activities as those conducted through the permanent establishment. Compare U.S. MODEL, *supra* note 56, art. 7, ¶ 1, and OECD MODEL, *supra* note 21, art. 7, ¶ 1, with UN MODEL, *supra* note 78, art. 7, ¶ 1.

⁹¹ For an argument that thresholds are appropriate, should be used even in the absence of a treaty, and should be made more uniform (in the current models, there are different thresholds for different activities), see Brian J. Arnold, *Threshold Requirements for Taxing Business Profits Under Tax Treaties*, in THE TAXATION OF BUSINESS PROFITS UNDER TAX TREATIES 55 (Brian J. Arnold et al. eds., 2003). The permanent establishment concept has been revised and updated to adapt to changes in business and technology over the years, but generally remains consistent with the original version introduced in the first OECD Model Tax Convention, which was released in 1963. OECD, *Income and Capital Draft Model Convention, Draft Convention For the Avoidance of Double Taxation With Respect to Taxes on Income and Capital*, art. 5, ¶¶ 1-2 (July 30, 1963).

higher source-based taxation of passive items is appropriate. Just how high, however, has not been determined. While the OECD Model provides recommended maximum source-country tax rates for dividends (5% on “direct dividends” (those paid to corporate shareholders holding at least 10% of the paying company’s stock) and 15% on “regular dividends” (all other shareholders)), interest (10%), and royalties (0%),⁹² and the U.S. Model is virtually identical (but provides zero source-country taxation of interest),⁹³ the UN Model leaves the source-country taxation of these items to be established through bilateral negotiations.⁹⁴ Thus, the UN Model implies that higher tax rates are appropriate in tax treaties with LDCs, but declines to recommend exactly what rate is appropriate.⁹⁵

The U.S. has frequently used the provisions and concepts of the UN Model in its tax treaties with developed as well as less developed countries.⁹⁶ For example, the U.S. income tax treaties with Barbados, Canada, China, Cyprus, Egypt, Estonia, India, Indonesia, Jamaica, Kazakhstan, Korea, Latvia, Lithuania, Mexico, Morocco, the Philippines, Thailand, Tunisia, Turkey, the Ukraine, and Venezuela each provide for lower permanent establishment duration requirements, narrower definitions of ancillary and preparatory activities, higher source-country tax rates on passive income items, or a combination of these features.⁹⁷

⁹² See OECD MODEL, *supra* note 21, arts. 10, 11, 12.

⁹³ U.S. MODEL, *supra* note 56, art. 11.

⁹⁴ UN MODEL, *supra* note 78, art. 11 (including a blank line and a parenthetical that states “the percentage is to be established through bilateral negotiations”).

⁹⁵ See generally U.S. MODEL, *supra* note 56, arts. 10, 11, 12; OECD MODEL, *supra* note 21, arts. 10, 11, 12; UN MODEL, *supra* note 78, arts. 10, 11, 12.

⁹⁶ Kusters, *supra* note 88, at 9.

⁹⁷ See U.S.-Barbados Treaty, *supra* note 4, art. 5; Convention with Respect to Taxes on Income and on Capital, U.S.-Can., art. 5, Sep. 26, 1980, T.I.A.S. No. 11087 [hereinafter, U.S.-Canada Treaty]; U.S.-China Treaty, *supra* note 4, art. 5; U.S.-Cyprus Treaty, *supra* note 4, art. 9; U.S.-Cyprus Treaty, *supra* note 4, art. 5; U.S.-Egypt Treaty, *supra* note 4, art. 5; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Est., art. 5, Jan. 15, 1998, S. TREATY DOC. NO. 105-55 (1999); U.S.-India Treaty, *supra* note 4, art. 5; U.S.-Indonesia Treaty, *supra* note 4, art. 5; U.S.-Jamaica Treaty, *supra* note 4, art. 5; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital, U.S.-Kaz., art. 5, Oct. 24, 1993, S. TREATY DOC. NO. 103-33 (1996); U.S.-Korea Treaty, *supra* note 4, art. 9; Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Lat., art. 5, Jan. 15, 1998, S. TREATY DOC. NO. 105-57 (1999); Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Lith., art. 5, Jan. 15, 1998, S. TREATY DOC. NO. 105-56 (1999); Convention for the Avoidance of Double Taxation and the Prevention of

The consequence of preserving source-country taxation to overcome non-reciprocal capital flows, however, is that it undermines the relief of double taxation ostensibly sought as the primary purpose for entering into the treaty in the first place. This has been a source of problems for drafters and negotiators of tax treaties and treaty models, who appear to have difficulty determining whether it is better for LDCs to preserve source-country taxation so as to allow the source country to collect the maximum amount of revenues, or to relieve source-country taxation so as to attract the maximum amount of foreign investment.⁹⁸ As discussed in Part IV, this choice is one of the main reasons tax treaties have become obsolete for many investors in LDCs. Yet new U.S. tax treaties with LDCs continue to be sought, and when concluded, they continue to provide for higher source-country taxes on passive income items, even, on occasion, when the treaty rate exceeds that of the internal laws of the LDC.⁹⁹

The importance of reciprocity as requisite to make a tax treaty appropriate is demonstrated in the current composition of the U.S. tax treaty network. Like all developed countries, the U.S. has tax treaties in place with all of its major reciprocal trading partners¹⁰⁰ and with the bulk of its foreign direct investment sources and destinations.¹⁰¹ Yet, with just 55 comprehensive tax treaties covering 62 countries, the U.S. network is comparatively small relative to the other major

Fiscal Evasion with Respect to Taxes on Income, U.S.-Mex., art. 5, Sep. 18, 1992, S. TREATY DOC. NO. 103-7 (1993) [hereinafter U.S.-Mexico Treaty]; U.S.-Morocco Treaty, *supra* note 4, art. 4; U.S.-Philippines Treaty, *supra* note 4, art. 5; U.S.-Thailand Treaty, *supra* note 4, art. 5; U.S.-Tunisia Treaty, *supra* note 4, art. 5; Agreement for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Turk., art. 5, Mar. 28, 1996, S. TREATY DOC. NO. 104-30 (1997); Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital, U.S.-Ukr., art. 5, Mar. 4, 1994, S. TREATY DOC. NO. 104-30 (2000); U.S.-Venezuela Treaty, *supra* note 4, art. 5.

⁹⁸ Tsilly Dagan eloquently illustrated the conundrum and presented a game theory rationale that explains why many LDCs have opted for the latter. *See generally* Dagan, *supra* note 40.

⁹⁹ *See* discussion *infra* at note 139.

¹⁰⁰ Major trade partners include Canada, China, Germany, Japan, Mexico, and the U.K. WORLD FACTBOOK, *supra* note 1, at 577 (entries listing major import and export partners). The most glaring exception in the U.S. tax treaty network is probably Brazil, with whom negotiations have been stalled since 1992. *See infra* note 307.

¹⁰¹ The tax treaty network currently covers approximately 78% of U.S. foreign direct investment, as valued at historical cost (book value of U.S. direct investors' equity in and net outstanding loans to foreign affiliates). *See* Maria Borga & Daniel R. Yorgason, *Direct Investment Positions for 2003: Country and Industry Detail*, SURV. OF CURRENT BUS., JULY 2004, at 40, 49 [hereinafter Borga & Yorgason], <http://www.bea.doc.gov/bea/ARTICLES/2004/07July/0704dip.pdf>.

economies of the world,¹⁰² and it excludes more than 20% of U.S. foreign direct investment.¹⁰³ Moreover, just 16 U.S. tax treaties are with LDCs,¹⁰⁴ as compared with an average of 22 in other leading economies.¹⁰⁵ To the extent that tax treaties influence the flow of trade and investment between the U.S. and the rest of the world, they may impact U.S. foreign investment, trade, and aid efforts to LDCs. The following Part explores whether more complete U.S. tax treaty coverage could impact these flows by considering a hypothetical tax treaty with Ghana, an LDC in Sub-Saharan Africa.

III. U.S. TAX TREATIES WITH LDCS: CASE STUDY OF GHANA

This Part presents as a case study a hypothetical tax treaty between the U.S. and Ghana, based on current U.S. tax treaty standards with respect to LDCs. The case study demonstrates that the lack of tax treaties between the U.S. and the LDCs of Sub-Saharan Africa may be explained in large part by the fact that in today's global tax climate, these agreements would not significantly impact the global tax burden that current or potential international investors are facing. As a result, even if governments are committed to concluding them, and even though they are supported by academics, practitioners, and lawmakers, tax treaties between the U.S. and the LDCs of Sub-Saharan Africa would nevertheless be largely ineffective in stimulating cross-border investment and trade.

¹⁰² In contrast, the U.K. and France each have tax treaties with over 100 countries; Canada and the Netherlands with over 80. See Ernst & Young, *supra* note 35, at 134-36, 263-65, 641-42, 984-85.

¹⁰³ See *supra* note 69.

¹⁰⁴ See *supra* note 4. When the tax treaty with Sri Lanka (signed in 1985) entered into force in July of 2004, it was the first new country added to the tax treaty network since the treaty with Slovenia entered into force in 2001, and the first new LDC since Venezuela was added in 1999. Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital, U.S.-Slovn., June 21, 1999, S. TREATY DOC. NO. 106-9 (2001); U.S.-Venezuela Treaty, *supra* note 4; U.S.-Sri Lanka Treaty, *supra* note 4.

¹⁰⁵ Seventeen of the thirty OECD countries have larger LDC tax treaty networks. For example, the U.K. and France each have tax treaties with 60 LDCs, Canada has 40, Germany has 36, Norway has 35, and Italy and Sweden each have 32. Compiled from Ernst & Young, *supra* note 35, at 129-31, 250-52, 287-88, 426-28, 652-53, 855-57, 938-39 and the LexisNexis Tax Analysts Worldwide Tax Treaties database, <http://w3.nexis.com/sources/scripts/info.pl?250064> (last visited Nov. 11, 2005).

A. *Ghana as Case Study Subject*

The pursuit of a tax treaty with Ghana, a nation of 20 million people in West Africa, would support current U.S. commercial and non-commercial interests in this country. Non-commercial interests of the U.S. in Ghana include longstanding diplomatic ties,¹⁰⁶ an interest in fostering economic stability in this region of the world for humanitarian reasons, and recognition that conditions of extreme poverty like those found in Ghana are a potential breeding ground for terrorism.¹⁰⁷

U.S. commercial interests in Ghana include both trade and investment relationships. Several large foreign investments in Ghana are owned by U.S. companies,¹⁰⁸ and U.S. companies continue to express interest in pursuing business opportunities in this country.¹⁰⁹ U.S. investment in

¹⁰⁶ See U.S. Department of State, Background Note: Ghana, <http://www.state.gov/r/pa/ei/bgn/2860.htm> (last visited Nov. 11, 2005) (“The United States has enjoyed good relations with Ghana at a nonofficial, personal level since Ghana’s independence. Thousands of Ghanaians have been educated in the United States. Close relations are maintained between educational and scientific institutions, and cultural links, particularly between Ghanaians and African-Americans, are strong.”).

¹⁰⁷ Embassy bombings in Kenya and Tanzania in 1998, allegedly linked to the international terrorist organization al-Qaeda, provide perhaps the most illustrative reason for U.S. interests in brokering peace and stability in Sub-Saharan Africa. The U.S. also has interests in Sub-Saharan Africa for social justice reasons, including the extreme poverty faced by a majority of the population in this region. For a discussion of the importance of pursuing tax treaties in response to these issues, see Brown, *supra* note 7, at 48-51.

¹⁰⁸ These include the Volta Aluminum Company, Ltd (Valco), a Ghanaian aluminum manufacturing company that is jointly owned by Kaiser Aluminum Corp. (a Texas corporation owning 90%) and Alcoa Inc., (a Pennsylvania corporation owning 10%); Regimanuel Gray, a construction company jointly owned by Regimanuel Ltd. (a Ghanaian company) and Gray Construction (a Texas corporation); and Equatorial Bottlers, a bottling company wholly owned by the Coca Cola Company (a Delaware corporation). See the company websites of Valco at <http://www.alcoa.com/ghana/en/home.asp>, Regimanuel Gray at <http://www.regimanuelgray.com/about.asp>, and Equatorial Bottlers at <http://www.ghana.coca-cola.com> (each describing the respective companies’ U.S. ownership and Ghanaian operations).

¹⁰⁹ See, e.g., *Newmont to Start up in Ghana*, DAILY TELEGRAPH (Sydney, Australia), Dec. 22, 2003, at 59 (discussing the purchase by Newmont Mining Corp., a Delaware corporation, of the Ahafo gold mine in Ghana); Elinor Arbel, *AMR, Pier 1 Imports, Sun Microsystems: U.S. Equity Movers Final*, BLOOMBERG NEWS, Aug. 16, 2004 (discussing plans by Alcoa Inc., a Pennsylvania corporation, to buy and restart an aluminum smelter in Ghana); G. Pascal Zachary, *Searching for a Dial Tone in Africa*, N.Y. TIMES, July 5, 2003, at C1 (quoting a former senior executive of Microsoft who surveyed Ghana as a potential regional hub for an information-technology industry, and stated that Ghana “has the potential to become for Africa what Bangalore became for India;” and discussing Rising Data Solutions, a Maryland corporation that recently

and trade with Ghana is generally facilitated by a number of factors. For instance, as a former colony of the U.K.,¹¹⁰ Ghana's official language is English,¹¹¹ its laws are a blend of customary law and English common law, and its regulatory state derives much from the British system, thus providing a familiar framework for commercial relations.¹¹²

U.S. trade and aid initiatives specifically identify Ghana as regionally significant to U.S. trade interests due to its central location in an international business corridor that stretches from Nigeria to Côte d'Ivoire.¹¹³ As is the case for many LDCs,¹¹⁴ the U.S. is one of Ghana's principal trading partners, although U.S. goods comprise a small portion of

introduced a call center in Ghana, and Affiliated Computer Services, a Dallas company that began doing business in Ghana in 2001 and is looking to expand its operations).

¹¹⁰ Seventeen LDCs in Sub-Saharan Africa are former colonies of the U.K.: Botswana, Gambia, Ghana, Kenya, Lesotho, Malawi, Mauritius, Nigeria, Seychelles, Sierra Leone, Somalia, Sudan, Swaziland, Tanzania, Uganda, Zambia, and Zimbabwe; all but Somalia and Sudan designate English as their official language; an additional four countries list English among their official languages. See WORLD FACTBOOK, *supra* note 1, at 73, 204, 214, 295, 318-19, 339-40, 359-60, 406, 487-90, 502, 515-16, 522-23, 536, 562-63, 605-06, 608-09.

¹¹¹ The use of English may be an important factor for the foreign investment location decisions of U.S. multinational firms. See Irving B. Kravis & Robert E. Lipsey, *The Location of Overseas Production and Production for Export by US Multinational Firms* 32 (Nat'l Bureau of Econ. Research, Working Paper No. 0482, 1982), available at <http://ssrn.com/abstract=262704> (stating that identity of language may significantly reduce the costs of foreign investment activities).

¹¹² U.S. multinational companies may prefer to invest in countries with which they have economic, political, linguistic, or cultural ties. JOHN H. DUNNING, *THE GLOBALIZATION OF BUSINESS: THE CHALLENGE OF THE 1990S* 37-43 (1993) (discussing geographical clustering of multinational companies).

¹¹³ PRESIDENT OF THE UNITED STATES, 2003 COMPREHENSIVE REPORT ON U.S. TRADE AND INVESTMENT POLICY TOWARD SUB-SAHARAN AFRICA AND IMPLEMENTATION OF THE AFRICAN GROWTH AND OPPORTUNITY ACT 5 (2003), http://www.agoa.gov/resources/annual_3.pdf. Ghana is also poised to be the financial hub of a West African monetary zone (WAMZ) that was expected to be established in July 2005 but is now targeted for implementation in 2009. See, e.g., HON. YAW OSAFO-MAAFO, M.P., MINISTER OF FINANCE AND ECONOMIC PLANNING, *THE BUDGET STATEMENT AND ECONOMIC POLICY OF THE GOVERNMENT OF GHANA FOR THE 2004 FINANCIAL YEAR* § 2(43) (2004); Peter J. Obaseki, *The Future of the West African Monetary Zone (WAMZ) Programme*, 5 W. AFR. J. OF MONETARY AND ECON. INTEGRATION 2, 4 (2005). When established, the WAMZ will facilitate commerce in the region by introducing a single currency (the ECO) in the Economic Community of West African States (ECOWAS), which includes Benin, Burkina Faso, Cape Verde, Côte d'Ivoire, the Gambia, Ghana, Guinea, Guinea-Bissau, Liberia, Mali, Niger, Nigeria, Senegal, Sierra Leone, and Togo. For information on ECOWAS, see the ECOWAS Home Page, <http://www.sec.ecowas.int> (last visited Nov. 11, 2005).

¹¹⁴ The U.S. is a principal export partner to 55% of LDCs, and a principal import partner to 40%. Compiled from WORLD FACTBOOK, *supra* note 1, at 16, 93, 99, 104, 109, 111, 126, 129, 131, 139, 156, 174, 176, 182, 203, 205, 215, 236, 296-97, 320, 322, 339, 341, 360, 382, 385, 404, 407, 491, 524, 564.

Ghana's total imports.¹¹⁵ As a result, like most of the LDCs in Sub-Saharan Africa, Ghana is a relatively untapped market for U.S. exports.¹¹⁶

Trends in U.S. trade and investment interests in Ghana support the notion that increasing investment in this country is a viable goal, which is being advanced by current efforts in executing international agreements. For example, U.S. trade with Ghana increased following the enactment and implementation of AGOA.¹¹⁷ Nevertheless, U.S. investment in Ghana remains relatively slight by global standards.¹¹⁸

Low levels of investment in Ghana may be explained by a number of factors including several non-tax barriers to investment. For instance, Ghana's low level of infrastructure has been blamed as a major impediment to increased investment.¹¹⁹ Examples of Ghana's infrastructural shortcomings include obvious physical burdens such as poorly

¹¹⁵ See U.S. DEPARTMENT OF STATE, GHANA COUNTRY COMMERCIAL GUIDE FY2002, ch. 1, available at <http://strategis.ic.gc.ca/epic/internet/inimr-ri.nsf/en/gr-80318e.html> (stating that "[i]n the past, Ghana conducted most of its external trade with Europe, but trade with the United States is becoming increasingly significant"). Ghana's import market is currently dominated by Nigeria, contributing 21.3% of all imports, followed by China with 8.7% and the U.K. with 6.7%. WORLD FACTBOOK, *supra* note 1, at 215. The U.S. is its fourth-largest partner, contributing 5.6% of total imports. *Id.* In comparison, the U.S. is currently a principal exporter to 18 other LDCs in Sub-Saharan Africa, contributing 50% of imports in Namibia, 42.3% in Eritrea, 31% in Equatorial Guinea, and between 12% and 19% in Angola, Chad, and Ethiopia. *Id.* at 16, 111, 174, 176, 182, 385.

¹¹⁶ As a potential export market, Ghana and other LDCs in Sub-Saharan Africa are also important to the U.S. labor market. See John Cochran, *Not Out of Africa: Bush Visits Africa—But Why Now?*, ABC NEWS REPORT, July 8, 2003, available at http://abcnews.go.com/sections/wnt/World/africa030708_bush.html (last visited June 11, 2003) ("Over 100,000 U.S. jobs depend on exports to Africa . . .").

¹¹⁷ Since 2000, when AGOA was first implemented, U.S. exports to Ghana have grown steadily, but imports from Ghana have decreased. UNITED STATES INTERNATIONAL TRADE COMMISSION, U.S. TRADE AND INVESTMENT WITH SUB-SAHARAN AFRICA (2000), http://www.usitc.gov/secretary/fed_reg_notices/332/I0516x3.htm.

¹¹⁸ UNCTAD, WORLD INVESTMENT REPORT 14 (2003), http://www.unctad.org/en/docs/wir2003_en.pdf [hereinafter WIR 2003].

¹¹⁹ See U.S. DEPARTMENT OF STATE, GHANA COUNTRY COMMERCIAL GUIDE FY2003, ch. 7, § A1, available at <http://strategis.ic.gc.ca/epic/internet/inimr-ri.nsf/en/gr109073e.html> (stating that infrastructure shortcomings have impeded domestic productivity and discouraged foreign direct investment). Along with the rest of Sub-Saharan Africa, which experienced a large and continuing decline in foreign direct investment (FDI) in tandem with the global financial crisis of the late 1990s, Ghana's share of global foreign investment has dropped significantly over the past few years, and it is considered an underperformer with respect to its FDI potential. *Id.* Its 40% decline in FDI from 2001 to 2002 mirrors the experience of the continent, to which FDI declined as a whole from \$19 billion in 2001 to \$11 billion in 2002 (a 41% decline). These declines are sharp when compared to that for global FDI, which declined as a whole by 21% in the same period. See WIR 2003, *supra* note 118, at 3, 14.

maintained roads,¹²⁰ interruptions in electricity,¹²¹ a lack of clean water,¹²² and a paucity of institutions such as schools and hospitals.¹²³ Equally problematic are Ghana's excessive administrative requirements and bottlenecks, as well as other barriers to the entry and operation of businesses by foreign persons.¹²⁴ For example, Ghana continues to struggle with land and property protection,¹²⁵ restricts foreign ownership of real

¹²⁰ As John Torgbenu, a taxi driver in Accra, describes the multitude of certifications needed to obtain a cab license in Ghana: "Cars must be road-worthy, but the roads need not be car-worthy." Interview with John Torgbenu, Taxi Driver in Accra, Ghana (2003) (on file with author). *See also* Memorandum of Economic and Financial Policies of the Government of Ghana for 2003-05, ¶ 8 (March 31, 2003) [hereinafter MEFP] ("Ghana's basic infrastructure continues to remain in very poor shape. The building of roads, ports, and communication networks . . . have been driving forces behind the government's efforts to secure a predictable flow of external financing for infrastructure development.").

¹²¹ Despite the presence of West Africa's largest hydro-electric plants at Volta Lake in northern Ghana, electricity outages are such a frequent phenomenon that individuals, businesses and institutions that can afford generators have them, and put them to use on a regular basis. Fueling the modernization process is one of the key developments sought in connection with Ghana's requests for IMF funding. *See* MEFP, *supra* note 120.

¹²² Ghana is among the majority of LDCs in the world that have not developed an improved water supply. *See* WORLD HEALTH ORGANIZATION, WATER SUPPLY, SANITATION AND HYGIENE DEVELOPMENT, http://www.who.int/water_sanitation_health/hygiene/en/ (last visited Nov. 11, 2005).

¹²³ Low levels of education, literacy, and health care issues are among the institutional issues Ghana faces. *See, e.g.*, GEORGE GYAN-BAFFOUR, THE GHANA POVERTY REDUCTION STRATEGY: POVERTY DIAGNOSTICS AND COMPONENTS OF THE STRATEGY 4 (2003), <http://www.casmsite.org/Documents/Elmina%202003%20-%20Workshop%20-%20Poverty%20Reduction%20-%2003.pdf> (last visited Nov. 11, 2005).

¹²⁴ Much of these administrative regimes are a lasting legacy of colonization, under which the European nations imposed severe market controls to preserve the resources of their colonies for their exclusive use. *See, e.g.*, FRANCIS AGBODEKA, AN ECONOMIC HISTORY OF GHANA 126-27 (1992). For an overview of ease of entry issues for LDCs generally, *see* JEFFREY C. HOOKE, EMERGING MARKETS: A PRACTICAL GUIDE FOR CORPORATIONS, LENDERS, AND INVESTORS (2001) (discussing the entrenched obstacles to entry in LDCs); *see also* Leora Klapper et al., *Business Environment and Firm Entry: Evidence from International Data* 16 (Nat'l Bureau of Econ. Research, Working Paper No. 10380, 2004), available at <http://papers.nber.org/papers/w10380.pdf> (finding that bureaucratic entry regulations are a significant burden that hampers the entry of firms into foreign markets).

¹²⁵ Courts in Ghana are overwhelmed with land disputes. *See, e.g.*, Joseph Coomson, *Country Achieves Below 40 Percent Delivery*, GHANAIAN CHRONICLE, Aug. 18, 2005 (discussing "many land disputes among traditional authorities" and stating that there are currently "more than 62,000 land disputes . . . being heard at the courts").

property,¹²⁶ and has only recently dismantled regulations that completely closed several industries to foreign investors.¹²⁷

As part of its approach to poverty reduction and economic growth through the creation of a business-friendly environment, Ghana's current administration has pledged to make significant improvements to its infrastructure.¹²⁸ The reduction of administrative obstacles, combined with greater certainty with regard to the legal and regulatory regime, is credited with a recent surge in foreign investment from South Africa to other countries in Sub-Saharan Africa.¹²⁹ It is hoped that this surge will be followed by increased investment from other countries, including the U.S.

An increased share of foreign investment is also expected to lead to spillover effects that would remedy some of the current deficiencies in physical infrastructure. Limited spillover effects have been achieved recently in connection with Ghana's gold mining operations, which have provided funding

¹²⁶ The inability to own land translates to an inability to use land as collateral for financial transactions, which is a key to economic growth. See Enrique Gelbard & Sérgio Pereira Leite, *Measuring Financial Development in Sub-Saharan Africa* 18 (Int'l Monetary Fund, Working Paper No. 99/105, 1999), available at <http://www.imf.org/external/pubs/ft/wp/1999/wp99105.pdf>.

¹²⁷ See WIR 2003, *supra* note 118, at 36.

¹²⁸ HON. YAW OSAFO-MAAFO, M.P., MINISTER OF FINANCE AND ECONOMIC PLANNING, THE BUDGET STATEMENT AND ECONOMIC POLICY OF THE GOVERNMENT OF GHANA FOR THE 2003 FINANCIAL YEAR ¶ 22 (2003) (pledging the government's "commitment to deliver a macro-economic environment that underpins our strategy for growth and poverty reduction"); HON. YAW OSAFO-MAAFO, M.P., *supra* note 113, at ¶ 4 (pledging to continue to "create an enabling environment for wealth creation"). See also various documentation in connection with IMF lending, including the MEFP, *supra* note 120.

¹²⁹ Nicole Itano, *South African Companies Fill a Void*, N.Y. TIMES, Nov. 4, 2003, at W1 ("It's safer to go in, it's easier to get materials in and out, easier to repatriate your profits," according to Keith Campbell, a managing director of a South African risk management firm and vice-chairman of the South Africa-Angola Chamber of Commerce). The overhaul of economies has often been initiated by the international lending organizations, which have faced much criticism and been the subject of much debate in the face of the apparent failure of many of their reform efforts. However, the extreme opposite approach, as unfortunately presented in the case of Zimbabwe, illustrates the need for some fundamental certainty in dealing with foreign businesses in order to attract foreign investment and maintain a stable economy. See, e.g., Michael Wines, *Around Ruined Zimbabwe, Neighbors Circle Wagons*, N.Y. TIMES, July 6, 2005, at A4 (describing the "fiscal and political collapse" of that country since it began seizing white-owned farms in 2000); David White & John Reed, *Showdown over Pariah State Leaves the Commonwealth Divided and Frustrated*, FIN. TIMES, Dec. 9, 2003 (discussing ramifications of Zimbabwe's withdrawal from the British Commonwealth); Tony Hawkins, *Zimbabwe Dollars Cut 80% at Auction*, FIN. TIMES, Jan. 13, 2004 (stating that massive currency devaluation is in line with market expectations for Zimbabwe).

to improve transportation routes.¹³⁰ In Nigeria, one of Ghana's close neighbors, investors in the telecommunications industry funded the installation of communication networks throughout the country.¹³¹ Ghana's growing telecommunications industry may draw like commitments from future investors.¹³² However, the components of infrastructure that are not produced by spillover, such as the legal and regulatory framework that protects businesses and creates an environment for growth, generally must be directly supported and funded by the government.¹³³

Despite the infrastructural obstacles present in Ghana, U.S. investment in this country continues to grow, albeit slowly. The following Section explores whether and how such a tax treaty between the two countries might affect investment in Ghana.

¹³⁰ Ghana's gold mines have recently sparked interest from foreign investors, who will spend millions of dollars to upgrade and develop operations following years of neglect and under-maintenance of these operations, because they expect productivity to increase dramatically and produce significant profit as a result. See *Mr. Jonah Goes to Jo'burg*, *ECONOMIST*, Jan. 17, 2004, at 56 (AngloGold (South Africa) expects to spend between \$220 and \$500 million to upgrade its newly acquired Ghanaian gold mine (Ashanti Goldfields)); *Newmont to Go for Ghana Gold*, *ADVERTISER* (S. Austl.), Dec. 22, 2003, Finance at 50 (Newmont (U.S.) plans to spend about \$350 million to develop its recently-acquired Ghanaian gold mine (Ahafo)). See also *Big-Game Hunting*, *ECONOMIST*, Aug. 16, 2003, at 57; Gargi Chakrabarty, *Newmont OKs Project in Ghana; Gold Producer Invests \$350 Million in W. African Mine*, *ROCKY MOUNTAIN NEWS*, Dec. 19, 2003, at B2; and Gargi Chakrabarty, *Latest Global Hot Spot for Gold Mining: Ghana*, *ROCKY MOUNTAIN NEWS*, Oct. 30, 2003, at B1.

¹³¹ South Africa's Vodacom recently spent \$119 million building a cellular network in the Congo, a critically impoverished country that has only recently emerged from devastating civil war. South Africa's MTN Group spent approximately \$1.75 billion building cellular networks in five different Sub-Saharan Africa countries (\$900 million in Nigeria alone), and experiences a 40% profit margin in these markets—despite having to build power generators to overcome a lack of stable power sources and a transmission network to connect cities and towns across the country—compared to its 30% return at home in South Africa. Itano, *supra* note 129.

¹³² See Zachary, *supra* note 109.

¹³³ Coercion of various forms may induce companies to provide such infrastructure in the absence of voluntary action. For example, in 2003 foreign oil workers were kidnapped in Nigeria in an effort to extract a promise from a foreign company to build a school or a health center. See *Nigeria's Oil-Rich Area Mired in Poverty*, *DAILY GRAPHIC* (Ghana), Dec. 3, 2003, at 5. Clearly no government should be encouraged to rely on these kinds of tactics to build adequate infrastructure, but the fact that citizens of a nation are willing to engage in illegal acts to secure public goods illustrates the tensions and pressures facing both international businesses and the governments struggling to attract such businesses.

B. *Structure of a Tax Treaty Between Ghana and the U.S.*

As discussed in Part I, the U.S. Model serves as the template for all new tax treaties negotiated by the Treasury Department, though the OECD Model and other recent treaties are also consulted. Thus, in structure and overall content, a tax treaty between the U.S. and Ghana would emulate the model treaties, especially the U.S. Model, to a substantial degree. However, in negotiations with LDCs, the Treasury Department also consults the UN Model.¹³⁴ As a result, these treaties usually contain several standard deviations from the U.S. Model, described in reports and technical explanations as “developing-country concessions.”¹³⁵ They are called concessions because they typically concede U.S. residence-based taxing jurisdiction in favor of greater source-country taxation.¹³⁶

An example of a U.S. treaty with an LDC, as compared to the U.S. Model Treaty, demonstrates the operation of these

¹³⁴ See, e.g., Department of the Treasury Technical Explanation of the Convention Between the Government of the United States of America and the Government of the Democratic Socialist Republic of Sri Lanka for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, Mar. 14, 1985, as Amended by a Protocol Signed at Washington on Sept. 20, 2002, <http://www.treas.gov/press/releases/reports/tesrlanka04.pdf> (“Negotiations also took into account the [OECD Model], the [UN Model], and recent tax treaties concluded by both countries.”).

¹³⁵ This designation has been consistently propounded throughout U.S. tax treaty history, and continues virtually unchanged today. Compare, e.g., STAFF OF JOINT COMM. ON TAXATION, 101ST CONG., EXPLANATION OF PROPOSED INCOME TAX TREATY (AND PROPOSED PROTOCOL) BETWEEN THE UNITED STATES OF AMERICA AND THE REPUBLIC OF INDIA 10-11 (Comm. Print 1990) (“The proposed treaty contains a number of developing country concessions . . . providing for relatively broad source-basis taxation.”), and STAFF OF S. FOREIGN RELATIONS COMM., 101ST CONG., REPORT ON THE TAX CONVENTION WITH THE REPUBLIC OF INDIA 2-8 (Comm. Print 1990), with STAFF OF JOINT COMM. ON TAXATION, 108TH CONG., EXPLANATION OF PROPOSED INCOME TAX TREATY BETWEEN THE UNITED STATES AND THE DEMOCRATIC SOCIALIST REPUBLIC OF SRI LANKA 18, 64 (Comm. Print 2004) [hereinafter EXPLANATION OF SRI LANKA TREATY] (describing these deviations as substantive, and outlining the major provisions).

¹³⁶ EXPLANATION OF SRI LANKA TREATY, *supra* note 135, at 64. To the extent that source-based taxing jurisdiction is theoretically more justifiable, the term “concession” is something of a misnomer. See discussion in Part II.B. Nevertheless, as much source-based jurisdiction has been ceded in favor of residence-based jurisdiction in the evolution of the model treaties, a reversal of this norm, especially in the case of non-reciprocal capital flows, can in theory shift greater tax revenue collection to the country of source. By so doing, it requires the residence country to revert to the role of relieving double taxation via the generosity of the foreign tax credit, discussed *supra*, note 43 and accompanying text. However, the theory that revenues are conceded under these provisions only holds if the source country actually imposes and collects the tax. This is an assumption which cannot be relied upon in today’s global economy, as discussed *infra* Part IV.B.2.

concessions. At the time it was entered into, the U.S. tax treaty with Jamaica was deemed to be the “precedent for negotiations” with other LDCs.¹³⁷ At twenty-four years of age, that treaty is substantially out of date, as many tax laws in the U.S. (and presumably in Jamaica) have changed significantly since it entered into force in 1981.¹³⁸ However, the principle of enlarging source-country taxation found in the U.S.-Jamaica treaty continues to appear in new tax treaties with other LDCs.¹³⁹ Therefore, the following discussion uses the U.S.-Jamaica treaty to model the terms that might be expected in a U.S.-Ghana tax treaty, should one be concluded.

In the U.S. tax treaty with Jamaica, as in most U.S. tax treaties with LDCs, the expectation that non-reciprocal capital flows may negatively impact the LDC is addressed by preserving source-country taxation. This is mainly accomplished through modifications to the articles dealing with the determination of thresholds for taxing income from business activities (the permanent establishment provision) and those dealing with the taxation of passive-type income (dividends, interest, and royalties provisions).¹⁴⁰

First, under the permanent establishment concept, source-country taxation is enlarged by expanding the definition to allow the LDC to impose taxation on more of the business profits earned by foreign persons in the source country. Thus, in the U.S.-Jamaica treaty, the permanent establishment provision mirrors the structure of the U.S. and OECD Models, but incorporates the UN Model approach, shortening the threshold durational requirement from one year to six months in the case of construction, dredging, drilling, and similar activities.¹⁴¹ It also provides that the furnishing of services can create a permanent establishment if continued for more than

¹³⁷ STAFF OF JOINT COMM. ON TAXATION, 97TH CONG., EXPLANATION OF PROPOSED INCOME TAX TREATY (AND PROPOSED PROTOCOL) BETWEEN THE UNITED STATES AND JAMAICA 4 (Comm. Print 1981).

¹³⁸ U.S.-Jamaica Treaty, *supra* note 4.

¹³⁹ Evidently, in some cases this is done regardless of the pre-existing legal framework in the LDC. See EXPLANATION OF SRI LANKA TREATY, *supra* note 135, at 62 (stating that “it is not clear that . . . Sri Lankan laws have been fully taken into account” since “[s]everal of the articles of the proposed treaty contain provisions that are less favorable to taxpayers than the corresponding rules of the internal Sri Lankan tax laws”).

¹⁴⁰ See *supra* Part II.C.

¹⁴¹ U.S.-Jamaica Treaty, *supra* note 4, art. 5, ¶ 2(i). The activity must continue for “more than 183 days in any twelve-month period,” and at least 30 days in any given taxable year to constitute a permanent establishment. *Id.*

ninety days a year.¹⁴² Finally, it provides that maintaining substantial equipment or machinery in a country for four months can constitute a permanent establishment.¹⁴³ One or more of these deviations from the U.S. Model are found in most U.S. tax treaties with LDCs.¹⁴⁴ Consequently, similar provisions would likely be suggested, negotiated, and agreed to in a U.S.-Ghana tax treaty.

Second, under the passive income provisions, source-country taxation is enlarged by allowing the source country to impose tax rates on these items of income in excess of the maximum rates provided in the U.S. Model. The U.S. Model allows source-country tax rates of no more than 5 and 15% on direct and regular dividends, respectively, and 0% on interest and royalties.¹⁴⁵ In contrast, the U.S.-Jamaica treaty provides for source-country tax rates of 10% on direct dividends,¹⁴⁶ 15%

¹⁴² *Id.* art. 5, ¶ 2(j). The services must continue for “more than 90 days in any twelve-month period” and at least 30 days in any given taxable year to constitute a permanent establishment. *Id.*

¹⁴³ *Id.* art. 5, ¶ 2(k). The equipment or machinery must be maintained “for a period of more than 120 consecutive days,” and at least 30 days in any given taxable year to constitute a permanent establishment. *Id.*

¹⁴⁴ *See, e.g.*, U.S.-India Treaty, *supra* note 4, art. 5, ¶ 2(j)-(l) (providing for the same concessions as in the U.S.-Jamaica Treaty, *supra* note 4). Similar deviations are also in U.S. tax treaties with other developed countries. *See, e.g.*, U.S.-Canada Treaty, *supra* note 97, art. V, ¶ 4 (providing that the use of a drilling rig or ship for more than three months in any twelve-month period constitutes a permanent establishment). Since Canada is a developed country, the Senate Report does not mention the UN Model as a source of consultation, and the Joint Committee does not identify the deviation as a concession by the U.S., but rather explains that “[t]he shorter period was included in the treaty at the insistence of Canada which felt that a one-year period was unrealistic, given the adverse conditions of drilling in the Canadian offshore and the fact that the drilling season there is very short.” *See* STAFF OF S. COMM. ON FOREIGN RELATIONS, 98TH CONG., REPORT ON THE TAX CONVENTION AND PROPOSED PROTOCOLS WITH CANADA (Comm. Print 1984); STAFF OF THE JOINT COMM. ON TAXATION, 96TH CONG., EXPLANATION OF TAX CONVENTION WITH CANADA (Comm. Print 1980). Narrow thresholds continue to appear in newly-signed U.S. tax treaties, such as the one with Bangladesh. *See supra* note 42, art. 5, ¶ 3, 6 (not yet in force).

¹⁴⁵ *See supra* notes 92-93 and accompanying text; U.S. MODEL, *supra* note 56, arts. 10-12. The OECD Model differs from the U.S. Model in that it provides for source-country tax rates of 5% in the case of dividends held by 25% or greater corporate shareholders, 15% in the case of all other dividends, 10% in the case of interest, and zero in the case of royalties. OECD MODEL, *supra* note 21, arts. 10-12. As discussed in Part II.C, the UN Model leaves the maximum tax rate blank, implying that countries should negotiate a higher rate in the case of treaties between developed and less developed countries. UN MODEL, *supra* note 78, arts. 10-12.

¹⁴⁶ U.S.-Jamaica Treaty, *supra* note 138, art. X, ¶ 2(a).

on regular dividends,¹⁴⁷ 12.5% on interest,¹⁴⁸ and 10% on royalties.¹⁴⁹

Despite the general trend of higher source-country taxation of passive income items in U.S. tax treaties with LDCs, source-country taxation of certain items of passive income have recently been lowered in a number of U.S. tax treaties, including one with Mexico, arguably an LDC.¹⁵⁰ The U.S. agreed to eliminate source-country taxation on direct dividends paid with respect to stock held by foreign controlling parent companies¹⁵¹ in a recent protocol to the U.S.-Mexico tax treaty.¹⁵² A most-favored nation provision in the original treaty¹⁵³ caused the elimination of source-country taxes on these direct dividends when the U.S. negotiated the same provision in recent treaties and protocols with Australia,¹⁵⁴ Japan,¹⁵⁵ and Britain.¹⁵⁶ According to Treasury officials, the elimination of source-country tax on direct dividends earned by foreign controlling companies reduces tax barriers and

¹⁵⁰ Second Additional Protocol that Modifies the Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Mex., art II Nov. 26, 2002, T.I.A.S. No. 108-4 (providing a zero-rate for dividends in the case of certain controlled companies), *available at* <http://www.ustreas.gov/press/releases/docs/mexico.pdf> [hereinafter U.S.-Mex.]. Mexico is not designated as an LDC in the World Factbook, but is included by reference to its OECD membership within the definition of developed countries, even though its per capita GDP of less than \$10,000 would align it with other LDCs. *See supra* note 20.

¹⁵¹ Those owning at least 80% of the foreign subsidiary's stock. *Id.* art. II, § 3(a).

¹⁵² *See id.* art. II. *See also* Report of the Senate Foreign Relations Committee on the Additional Protocol Modifying the Income Tax Convention with Mexico, U.S.-Mex., § VI(A), Mar. 13, 2003, S. EXEC. DOC. NO. 108-4 (2003) (protocols eliminate tax on certain direct dividends).

¹⁵³ *See* Protocol Amending the U.S.-Mexico Treaty, *supra* note 97, ¶ 8(b) ("If the United States agrees in a treaty with another country to impose a lower rate on dividends than the rate specified . . . both Contracting States shall apply that lower rate instead of the rate specified . . .").

¹⁵⁴ Protocol Amending the Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Austl., art. VI, May 2003 [hereinafter Australia Protocol].

¹⁵⁵ Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income, U.S.-Japan, art. XI, Nov. 6, 2003, T.I.A.S. No. 108-14 (2004) [hereinafter U.S.-Japan Treaty].

¹⁵⁶ Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and on Capital Gains, U.S.-U.K., art. X, July 24, 2001, *available at* <http://www.ustreas.gov/offices/tax-policy/library/uktreaty.pdf> [hereinafter U.S.-U.K. Treaty].

increases the economic ties between the partner countries.¹⁵⁷ Following the logic of this position, a U.S.-Ghana tax treaty should involve a significant lowering, if not complete elimination, of source-country taxation of dividends. The fact that the U.S. tax treaty with Mexico very recently adopted this position would seem to support the expectation of a similar provision in a tax treaty with Ghana.

However, the more likely result is that in a U.S.-Ghana tax treaty, source-country tax rates on dividends would be closer to the rates found in the Jamaica treaty than those found in the Mexico treaty.¹⁵⁸ No recent U.S. tax treaty with an LDC has incorporated a zero rate for dividends paid to controlling company shareholders, and all provide for maximum source-country tax rates on passive income items that are higher than those provided in the U.S. Model.¹⁵⁹

Thus, as in the case of the permanent establishment provisions, the higher source-country rates that are typical in U.S. tax treaties with LDCs would likely be suggested, negotiated, and agreed to in a U.S.-Ghana tax treaty.¹⁶⁰ Using

¹⁵⁷ See STAFF OF S. FOREIGN RELATIONS COMM., 108TH CONG., REPORT ON THE CONVENTION WITH JAPAN (Comm. Print 2003) (noting that many bilateral tax treaties to which the United States is not a party eliminate taxes on direct dividends, that the EU's Parent-Subsidiary Directive achieves the same result, and that the United States has signed treaty documents with the U.K. and Australia that include provisions similar to the one in the Mexico protocol); see also John W. Snow, U.S. Sec'y of the Treasury, Remarks at the U.S.-Japan Income Tax Treaty Signing Ceremony (Nov. 6, 2003), available at <http://www.treas.gov/press/releases/js975.htm> (stating that the new U.S.-Japan Treaty "will significantly reduce existing tax-related barriers to trade and investment between Japan and the United States" and "will foster still-closer economic ties" between the two countries).

¹⁵⁸ The Mexico treaty now provides for a maximum of 5% source-country taxation on direct dividends, 10% on regular dividends, and 0% on direct dividends paid to foreign companies with a controlling interest in the paying company. See U.S.-Mexico Treaty, *supra* note 97, art. 10.

¹⁵⁹ See, e.g., U.S.-Sri Lanka Treaty, *supra* note 4, arts. X-XII (providing maximum rates of 15% on all dividends and 10% on interest and royalties); U.S.-Bangladesh Treaty, *supra* note 42 (same rates as in the U.S.-Sri Lanka Treaty). Other than the lower rates on dividends, the U.S.-Mexico Treaty is consistent with other tax treaties with LDCs in that it provides for maximum source-country tax rates of 15% on interest and 10% on royalties. See U.S.-Mexico Treaty, *supra* note 97.

¹⁶⁰ The U.S. tax treaties with Greece (a developed country), the former countries of the U.S.S.R. (each a transition country), and Trinidad & Tobago (an LDC), each provide for a maximum 30% source-country tax rate for dividends, and those with Israel (a developed country), India, and the Philippines (each an LDC), provide a maximum 25% rate. See Convention for the Avoidance of Double Taxation and Prevention of Fiscal Evasion with Respect to Taxes on Income, Feb. 20, 1950, U.S.-Greece, 5 U.S.T. 47, TIAS 2902; TIAS; Convention on Matters of Taxation, Jun. 20, 1973, U.S.-U.S.S.R., TIAS 8225, 27 U.S.T. 1; U.S.-Trin. & Tobago Treaty, *supra* note 4; Convention with Respect to Taxes on Income, Nov. 20, 1975, U.S.-Isr.; U.S.-India Treaty, *supra* note 4; U.S.-Philippines Treaty, *supra* note 4. The newest U.S. tax

the U.S.-Jamaica treaty and other recent treaties with LDCs as a guide, a U.S.-Ghana tax treaty could be expected to provide maximum source-country tax rates of 10 to 15% on direct dividends, 10 to 15% on regular dividends,¹⁶¹ and 10% on interest and royalties.

The narrower permanent establishment thresholds and higher source-country tax rates are expected in a U.S.-Ghana tax treaty because they continue to appear in other U.S. tax treaties with LDCs. They appear in these treaties because it is believed that they will provide some benefit to the governments of the LDCs entering into these agreements. Yet, the overriding purpose of these treaties is the same as that for treaties exclusively between developed countries: they are supposed to relieve double taxation and therefore increase cross-border investment between the partner countries. The next Part explores the extent to which either of these goals are achieved under this hypothetical tax treaty between Ghana and the U.S.

IV. THE EFFECT OF A U.S.-GHANA TAX TREATY ON POTENTIAL U.S. INVESTORS

Assuming that Ghana is otherwise a viable destination for U.S. investment as described above, a tax treaty between these two countries would theoretically complement U.S. investment interests as well as its trade and aid initiatives. However, this Part demonstrates that in today's global tax climate, a tax treaty that follows the international standards set forth in the model treaties will likely be ineffective in achieving its goals as a result of several interrelated phenomena.

First, the scope of tax treaties appears to be too narrow in the context of these LDCs. Second, double taxation appears to be disappearing in international transactions involving these LDCs as a result of the widespread reduction in taxation

treaty, with Sri Lanka (an LDC), provides for a 15% tax rate on all dividends. *See Proposed Tax Treaties with Japan and Sri Lanka: Hearing Before the S. Comm. on Foreign Relations 108th Cong. 6 (2004)* (testimony of the Staff of the Joint Comm. on Taxation). The Sri Lanka treaty was considered by the Senate in February, 2004 together with the U.S.-Japan Treaty, which provides for zero taxation on certain dividends paid to controlling shareholders. *See id.* at 18, 20.

¹⁶¹ Forty-eight of the U.S. tax treaties currently in force provide a rate of 10-15% on regular dividends. INTERNAL REVENUE SERV., U.S. DEP'T OF THE TREASURY, PUBL'N 901, U.S. TAX TREATIES 33-34 tbl. 1 (2004); U.S.-Sri Lanka Treaty, *supra* note 4, art. 10.

caused by global tax competition and an ever-increasing availability of opportunities to avoid and evade income taxation. Third, there may be little differential between tax treaties and statutory law in the LDCs of Sub-Saharan Africa. Fourth, tax treaties may have little impact on multinational investment behavior in the face of non-tax characteristics of LDCs, such as inadequate infrastructure. Finally, tax treaties may offer little more than perception about the commercial and legal climate of a country for foreign investment. Because of the impact of each of these factors on global commercial activity, a tax treaty between Ghana and the U.S. would yield an insignificant impact on investment and trade between these two countries.

A. *Non-Comparable Taxation*

The first phenomenon that tends to reduce the potential benefit of a tax treaty between the U.S. and Ghana is the fact that U.S. multinational companies are likely to face non-income types of taxation in Ghana.¹⁶² Like many LDCs, Ghana relies on a broad range of taxes that are not relieved under tax treaties, including consumption, excise, and trade taxes.¹⁶³ The reliance on trade and excise taxes is historical, arising out of practices that have since been abandoned in developed countries in favor of personal income taxation and, outside of the U.S., consumption taxation, typically in the form of the value added tax (VAT).¹⁶⁴

VATs are relatively new to LDCs, having been introduced in the 1970s and 1980s largely as part of tax reforms initiated by international monetary organizations as a condition of lending.¹⁶⁵ Prior to the introduction of the VAT,

¹⁶² That is, if they face any taxation at all. *See infra* Part IV.B.

¹⁶³ *See, e.g.,* Guttentag, *supra* note 4, at 452 (“[W]e have noted a trend where developing countries question the desirability of maintaining high source based taxation, but need to find alternative sources of revenue . . . many of them rely to a lesser extent on OECD type tax systems . . . instead, there is a greater reliance on value added taxes and asset taxes.”).

¹⁶⁴ The shift from trade to income and consumption taxation in the U.S. and other developed countries is discussed in WEISMAN, *supra* note 41, at 14, 42, 44; William D. Samson, *History of Taxation*, in THE INTERNATIONAL TAXATION SYSTEM 33-37 (Andrew Lymer & John Hasseldine eds., 2002); Reuven S. Avi-Yonah, *Globalization, Tax Competition, and the Fiscal Crisis of the Welfare State*, 113 HARV. L. REV. 1573, 1576 (2000).

¹⁶⁵ From 1950, when the VAT emerged in its modern form, until 1980, many countries shifted from consumption taxes to payroll (social security) taxes, and since 1980, many countries have begun to shift from personal income taxes to VAT. KEN

many LDCs, including those in Sub-Saharan Africa, followed the customs of the developed world that were introduced under colonization and relied heavily on trade taxes for revenue.¹⁶⁶ The increased focus on the VAT was part of an overall effort to gradually reduce and, eventually, completely eliminate taxes on international trade.¹⁶⁷

In Ghana, the government introduced a 20% VAT in 1995 but quickly repealed it in the face of violent protests.¹⁶⁸ After a lengthy educational campaign, the government reinstated the VAT in 1998, this time at 10%.¹⁶⁹ Since then, the VAT has not led to a decrease in any other taxes. A decrease in international trade taxes (tariffs) and excise taxes was initially realized soon after introduction of the VAT, but this trend has since reversed itself, and tariffs are currently increasing as a percentage of total revenues collected.¹⁷⁰ Moreover, a temporary rise in corporate income taxation that accompanied the introduction of the VAT appears to have leveled off and corporate tax rates are currently decreasing.¹⁷¹ As a result, the introduction of the VAT in Ghana has led to an overall increase in taxes that are not addressed by treaties.¹⁷²

MESSERE ET AL., *TAX POLICY: THEORY AND PRACTICE IN OECD COUNTRIES* 28 (2003). See also Malcolm Gillis, *Tax Reform and the Value-Added Tax: Indonesia*, in *WORLD TAX REFORM: CASE STUDIES OF DEVELOPED AND DEVELOPING COUNTRIES* 227, 227 (Michael J. Boskin & Charles E. McClure, Jr., eds., 1990); Stewart, *supra* note 11, at 169.

¹⁶⁶ Vito Tanzi, *Taxation in Developing Countries*, in *TAX SYSTEMS IN NORTH AFRICA AND EUROPEAN COUNTRIES* 1, 8-9 (Luigi Bernardi & Jeffrey Owens, eds., 1994) (discussing revenue composition in LDCs). In Sub-Saharan Africa trade taxes averaged about 27% of total revenues from 1994 to 1999. Percentages of revenues collected attributable to trade taxes ranged from 5% in Angola, to 49% in Uganda. Scott Riswold, *IMF VAT Policy in Sub-Saharan Africa*, WTD, Sep. 1, 2003, at 8. For a discussion of the impact of colonization on tax systems in LDCs, see Stewart, *supra* note 11, at 145.

¹⁶⁷ Such efforts have been encouraged by international monetary organizations such as the International Monetary Fund (IMF) and the World Bank as part of an overall tax reform package introduced in various forms as a condition to ongoing lending arrangements. Stewart, *supra* note 11, at 170.

¹⁶⁸ *Ghana, Despite Its Successes, Is Swept by Anti-Tax Protests*, N.Y. TIMES, May 23, 1995, at A6 (describing VAT-related riot that led to five deaths).

¹⁶⁹ Miranda Stewart & Sunita Jogarajan, *The International Monetary Fund and Tax Reform*, 2 BRIT. TAX REV. 146, 155 (2004).

¹⁷⁰ The remainder of Ghana's tax revenue derives from excise taxes, mainly on petroleum. INSTITUTE OF STATISTICAL, SOCIAL AND ECONOMIC RESEARCH, *THE STATE OF THE GHANAIAN ECONOMY IN 2002*, at 26, 28-29 tbl.2.4 (2003) [hereinafter *STATE OF THE GHANAIAN ECONOMY*].

¹⁷¹ *Id.*

¹⁷² See Reuven S. Avi-Yonah, *From Income to Consumption Tax: Some International Implications*, 33 SAN DIEGO L. REV. 1329, 1350 (1996) (theorizing the obsolescence of the U.S. tax treaty network in the event the U.S. adopts a consumption

Finally, investors are likely to encounter non-comparable taxation in Ghana as a result of government stakeholding in many formerly state-owned enterprises. For example, cocoa produced in Ghana is not subject to income taxation,¹⁷³ but is subject to levy by the Ghana Cocoa Board, a monopsony for the international sale of Ghanaian cocoa products.¹⁷⁴ Similarly, the government extracts mining profits by owning shares in all mining operations and requiring the payment of dividends on such shares.¹⁷⁵ Thus, a focus on the VAT, income, international trade, and excise taxes in Ghana provides only an incomplete picture of the full burden of taxation imposed in this country. As treaties focus only on income taxation, they address taxation in LDCs to a very limited degree.

B. Decreasing Global Tax Burdens

As non-comparable taxation increases, income taxation is decreasing throughout the world. As a result, multinationals investing in LDCs may face little or no income taxation on their foreign earnings. First, taxation may be reduced or eliminated by residence countries pursuant to rules that provide assets in offshore companies an indefinite suspension (deferral) of residence-based taxation. Second, taxation may be reduced or eliminated by source countries pursuant to tax incentives that eliminate taxation for specified durations or perpetually. Third, taxation by both countries may be reduced

tax and repeals the income tax, since “[f]undamentally, income tax conventions apply to taxes on ‘income and capital’”). There are some tax treaties that address consumption taxes, specifically VAT. However, in most countries, the VAT employed is destination-based, meaning that exports are exempt from VAT and imports are subject to VAT. As a result, double VAT is avoided to a certain extent without need for international agreement (some double taxation will continue to occur to the extent there are varying definitions of exempted and included items). The inconsistency occurs to various degrees in every country that employs a VAT. Developed countries, however, continue to rely more heavily than LDCs on income taxation, which is relieved by, and therefore necessitates the continued existence of, tax treaties.

¹⁷³ G.I.R.A., *supra* note 83, § 11(7) (“income from cocoa of a cocoa farmer is exempt from tax”).

¹⁷⁴ Acting as the intermediary between farmers and the global market, the Ghana Cocoa Board has the “sole responsibility for the sale and export of Ghana cocoa beans,” and delivers only a fraction of realized proceeds to farmers, thus imposing a gross basis tax that currently approximates some 33%. See Ghana Cocoa Beans Production, Export And Prices, available at http://www.cocobod.gh/corp_div.cfm?BrandsID=13. See also STATE OF THE GHANAIAN ECONOMY, *supra* note 170, at 26.

¹⁷⁵ See Thomas C. Wexler, *Introduction to Mining in Ghana*, THE MINING JOURNAL, Nov. 10, 1995, at 353 (discussing strict government controls over and rights in Ghanaian mining operations).

or eliminated through strategies of tax avoidance and evasion. Finally, taxation by both countries may be reduced or eliminated pursuant to express efforts to do so by both taxing jurisdictions, usually through a tax treaty. The combination of reduction or elimination of taxation in both countries, whether express or not, leads to complete non-taxation¹⁷⁶ of multinational activities. As discussed more fully below, the resulting lack of taxation obviates the need to pursue tax relief under treaty.

1. Reduced Taxation Through Deferral

As discussed above, most developed countries impose taxation on a worldwide basis, yet most protect this right only with respect to certain items of income, allowing suspension of taxation on other items to continue indefinitely at the will of the shareholders.¹⁷⁷ Thus, despite the support for the primacy of residence-based taxation that originally served as a major reason for entering into tax treaties,¹⁷⁸ much residence-based taxation is undermined by the persistent allowance of deferral.

Deferral is antithetical to residence-based taxation. By allowing it, nominally residence-based jurisdictions like the U.S. mirror source-based (or territorial) systems by effectively providing tax exemptions for foreign income.¹⁷⁹ Deferral is defended on grounds of neutrality: it is argued that companies from residence-based countries like the U.S. face heavier global tax burdens than companies from territorial countries, when both operate in third countries that impose little or no source-based taxation. For example, it is suggested that U.S.-based multinational companies operating abroad may be subject to little source-based taxation as foreign countries compete to attract their investment by offering low tax burdens, but because of the U.S. system of worldwide taxation, the U.S.-based company is still subject to the higher U.S. domestic tax rates. In contrast, it is supposed that multinationals from territorial systems will have a tax advantage in the minimally-

¹⁷⁶ Sometimes called double non-taxation to indicate the coordinative effort that produces it.

¹⁷⁷ See *supra* text accompanying note 35.

¹⁷⁸ See *supra* text accompanying note 68.

¹⁷⁹ See Peroni, *supra* note 65, at 987. Passive income items such as dividends, interest, and royalties are generally not eligible for deferral and are therefore subject to current tax in the U.S.

taxing foreign country because these companies can combine low taxation abroad with exemption at home.¹⁸⁰

Based on this argument, deferral continues to be vigorously defended under principles of capital import neutrality,¹⁸¹ as requisite to allow U.S. companies to compete in low-tax countries against the multinational companies of territorial jurisdictions.¹⁸² That few multinational companies are actually residents of purely territorial systems,¹⁸³ and that deferral provides the equivalent of exemption for much of the foreign income earned by U.S. multinationals while simultaneously providing them with a competitive advantage over their domestic counterparts,¹⁸⁴ appears to have little effect

¹⁸⁰ See Roin, *supra* note 63, at 114 (citing deferral proponents who argue that “[a]ny businesses that Americans can successfully operate in low tax jurisdictions . . . foreign investors can carry on equally well [and that if deferral was ended] foreign investors would use their now unique tax advantage to overwhelm their American competitors, wherever located.”).

¹⁸¹ See discussion of neutrality *supra* note 61 and accompanying text.

¹⁸² See, e.g., Mark Warren, *Democrats Would Increase Taxes on Companies' Income Earned Abroad Repealing the Deferral Rule: The Wrong Answer to U.S. Job Losses*, 2004 WTD 88-16 (May 3, 2004) (arguing that some countries exempt the foreign earnings of their multinationals, U.S. companies would face a higher overall tax burden when operating in low-tax jurisdictions in the absence of deferral, and that U.S. companies “cannot be expected to succeed if they are handicapped by a 35-percent corporate-tax rate on their worldwide income”); National Foreign Trade Council, Inc., *The NFTC Foreign Income Project: International Tax Policy for the 21st Century*, 1999 WTD 58-37 (Mar. 25, 1999); *Impact of U.S. Tax Rules on International Competitiveness: Hearing Before the H. Comm. on Ways and Means*, 106th Cong. 64 (1999) (statement of Fred F. Murray, Vice President for Tax Policy National Foreign Trade Council, Inc.), available at http://frwebgate.access.gpo.gov/cgi-bin/getdoc.cgi?dbname=106_house_hearings&docid=f:66775.pdf (arguing that “[i]f the local tax rate in the company of operation is less than the U.S. rate, . . . competitors will be more lightly taxed than their U.S.-based competition,” whether they are locally based or foreign, “unless their home countries impose a regime that is as broad as subpart F, and none have to date done so”). The argument is perhaps as old as U.S. taxation itself. In the newly independent United States, import duties were favored over export duties or other forms of taxation, because the imposition of either export duties or property taxes on farmers would equally increase the price of goods destined for export, thus serving to “enable others to undersell us abroad.” See UNITED STATES IN CONG. ASSEMBLED, REPLY TO THE RHODE ISLAND OBJECTIONS, TOUCHING IMPORT DUTIES (1782), reprinted in 1 THE DEBATES IN THE SEVERAL STATE CONVENTIONS ON THE ADOPTION OF THE FEDERAL CONSTITUTION 100, 105 (Jonathon Elliot, ed. 1996).

¹⁸³ For example, of the top 100 multinationals, eighteen are from generally territorial systems (one from Hong Kong, three from Switzerland, one from Malaysia, and thirteen from France). Since France imposes a form of world-wide taxation on low-taxed earnings of controlled foreign companies, even this number is an exaggeration. Other countries may impose worldwide income generally, but exempt the foreign income of their multinationals under treaty. See UNCTAD World 100 Non-Financial TNCs, *supra* note 82.

¹⁸⁴ Domestic companies are subject to worldwide taxation and cannot generally opt to suspend the taxation of their profits. See generally Clifton Fleming Jr. et al., *An Alternative View of Deferral: Considering a Proposal to Curtail, Not Expand, Deferral*, 2000 WTD 20-15 (Jan. 31, 2000) (arguing that deferral is a subsidy for

on the efforts of U.S. multinationals to preserve the deferral privilege.¹⁸⁵

The effect of deferral is to increase the sensitivity of U.S. taxpayers to foreign tax rates, thus forcing source countries to continually lower their internal tax burdens so as to attract the ever more demanding foreign capital. Deferral thus causes tax competition, as any income taxation imposed by a source country, such as Ghana, subjects a potential foreign investor to a burden it could otherwise avoid.¹⁸⁶ Elimination of competition and tax sensitivity could be achieved if all countries adhered to principles of capital export neutrality. However, this would require international coordination and cooperation to a degree that appears overwhelmingly unattainable.¹⁸⁷

The consequence is that U.S. multinationals may generally avoid U.S. taxation on their foreign income by operating through subsidiary companies in source countries,¹⁸⁸ which they generally do.¹⁸⁹ As suspension and effective

operating business abroad and that proponents of deferral “have not candidly acknowledged the broad nature of the scope of the existing deferral privilege”).

¹⁸⁵ See *supra* text accompanying note 182.

¹⁸⁶ Deferral removes the existing (residual) tax burden, thereby ensuring that any tax imposed by a foreign country is a tax wedge. In the absence of deferral, the tax wedge is created by the home country and, outside of limitations on foreign tax credits, taxes imposed by the source country do not increase the wedge. For a discussion of the interaction of deferral and the subsequent efforts of source countries to eliminate tax wedges, see Dagan, *supra* note 40, at 952-56.

¹⁸⁷ See Victor Thuronyi, *International Tax Cooperation and a Multilateral Treaty*, 26 BROOK. J. INT'L L. 1641, 1642 n.8 (2001) (an internationally harmonized system is “too utopian to merit discussion”); Charles E. McLure, Jr., *Tax Policies for the XXIst Century*, in VISIONS OF THE TAX SYSTEMS OF THE XXIst CENTURY 9, 28-29 (1997). But see Yariv Brauner, *An International Tax Regime in Crystallization*, 56 TAX L. REV. 259, 260 (2003) (arguing that there has been a “modelization” of the international tax rules that could be built upon to achieve some measure of rule harmonization). Recent developments in the EU indicate that less, rather than more, cooperation is likely. See Joann M. Weiner, *EU Governments Fear Increased Tax Competition in Wake of Accession*, 2004 WTD 81-1 (Apr. 6, 2004); Joe Kirwin, *International Taxes European Commission Rejects Effort For Harmonized Corporate Tax Rates*, DAILY TAX REP., June 1, 2004, at G-8.

¹⁸⁸ Stephen E. Shay, *Exploring Alternatives to Subpart F*, 82 TAXES 3-29, 31 (2004) (multinationals are free to choose to operate through a branch or subsidiary, and they will generally choose subsidiary form unless the foreign effective tax rate is greater than the U.S. rate or if they benefit from pooling high- and low-taxed earnings).

¹⁸⁹ For example, several of the largest foreign investments in Ghana are U.S. controlled foreign corporations (CFCs), including the Valco, Regimanuel Gray, and Equatorial Bottlers, discussed *supra* note 108. Operating through a domestic subsidiary is also more advantageous from a Ghanaian perspective, since foreign companies are subject to strict scrutiny from the taxing and regulatory authorities to an extent exceeding that paid to domestic companies. The differential treatment is especially acute in the case of mining and other extractive operations, which are

elimination of taxation on foreign income becomes the norm in the developed world, LDCs respond accordingly, by increasingly offering corresponding tax relief in the form of tax incentives. These incentives have become a standard tool for capturing a share of the global flow of foreign investment.¹⁹⁰

2. Reduced Taxation Through Tax Incentives

Most countries use various forms of tax incentives to encourage particular behavior in taxpayers, and neither the U.S. nor Ghana is an exception. The U.S. employs numerous tax incentives to attract foreign investment and encourage domestic investment. These provisions are generally embedded in the tax base, rather than being reflected in the tax rates.¹⁹¹ For example, along with the privilege of deferral, tax credits for research and development (R&D) and accelerated depreciation deductions are among the major tax incentives the U.S. offers.¹⁹²

strictly regulated and limited as to foreign ownership by the Government of Ghana. Interview with Bernard Ahafor, Attorney, in Ghana (Dec. 2, 2003). *See also* Shay, *supra* note 188, at 31.

¹⁹⁰ The evidence is perhaps most obvious in regards to the number of countries offering tax holidays—over one hundred in 1998 and increasing—and the share of foreign investment directed at tax havens that are decried by the OECD for their harmful tax practices. While these countries command a fraction of the world's population and its GDP, they attract a disproportionately large amount of U.S. foreign investment capital. *See* Avi-Yonah, *supra* note 164, at 1577, 1589, 1643.

¹⁹¹ Since the 1960s, an awareness of the danger of the hidden costs of such incentives has led to expenditure budgeting, which quantifies the cost of embedded provisions. For an example, see *Analytical Perspectives*, *supra* note 65, at 285 (explaining the concept of expenditures and providing a selected list). Incentives currently provided in the U.S. tax base include accelerated depreciation and exclusions from taxation for certain forms of income such as tax-exempt interest. Tax incentives include any exclusions or exemptions that reduce or defer the tax base. *See generally* Alex Easson & Eric M. Zolt, *Tax Incentives*, 2002 WORLD BANK INST. 3 (“[t]ax incentives can take the form of tax holidays for a limited duration, current deductibility for certain types of expenditures, or reduced import tariffs or customs”). Ireland and Belgium, which offer low rates for foreign investors, are exceptions (and a source of consternation to their OECD counterparts) to the general rule of tax base rather than tax rate concessions in developed countries. *See, e.g.*, Avi-Yonah, *supra* note 164, at 1601.

¹⁹² Congress first provided a deduction for research and experimental expenditures in 1981, because it saw a decline in research activities it attributed to inadequacies in the I.R.C. § 174 deduction, which at that time only applied to investment in machinery and equipment employed in research or experimental activities. Congress concluded that “[i]n order to reverse this decline in research spending . . . a substantial tax credit for incremental research and experimental expenditures was needed.” STAFF OF THE J. COMM. ON TAX’N, 97TH CONG., GENERAL EXPLANATION OF THE ECONOMIC RECOVERY TAX ACT OF 1981, *reprinted in* INTERNAL REVENUE ACTS, 1980-1981, at 1369, 1494 (1982). In the same act, Congress provided for accelerated depreciation deduction allowances because the existing depreciation

Ghana also offers accelerated depreciation deductions and R&D credits similar to—but perhaps not as generous as—those of the U.S.¹⁹³ However, most LDCs, including Ghana, also offer significantly more generous incentives in the form of low corporate tax rates and myriad tax exemptions.¹⁹⁴ Ghana imposes only an 8% tax on income from the export of most goods, rates ranging from 16 to 25% for certain industries and businesses conducted in certain geographic areas, and complete exemption from taxation (tax holidays) for periods ranging from three to ten years for new activities conducted in certain industries or geographic areas.¹⁹⁵ Many LDCs, including Ghana, have also set aside geographic areas as havens from the normal tax and regulatory regimes (free zones), specifically to host manufacturing and processing plants. In Ghana's free zone, established in 1995, companies enjoy a ten-year tax holiday followed by tax rates never to exceed 8%.¹⁹⁶

International organizations such as the World Bank and the IMF currently decry the harm that tax holidays cause in

deduction allowances “did not provide the investment stimulus that was felt to be essential for economic expansion.” *Id.* at 1449. Enhanced bonus depreciation provisions were enacted in 2001 under the theory that “allowing additional first-year depreciation will accelerate purchases of equipment, promote capital investment, modernization, and growth, and will help to spur an economic recovery.” H.R. REP. NO. 107-251, pt. 2, at 20 (2001). Bonus depreciation was expanded in 2003 for the same reason. H.R. REP. NO. 108-94, pt. 2, at 23 (2003) (“increasing and extending the additional first-year depreciation will accelerate purchases of equipment, promote capital investment, modernization, and growth, . . . help to spur an economic recovery, . . . [and] increase employment opportunities in the years ahead). *See also* Richard E. Andersen, *IRS Relaxes Rules for Research Credit; Opportunities for R&D-Intensive Multinationals?*, 4 J. TAX’N. GLOBAL TRANSACTIONS 17 (CCH) (Spring, 2004) (discussing structures with which foreign and domestic multinationals can use R&D credits to generate tax-free profits in the U.S., and citing a 2003 study by Bain & Co., entitled *Addressing the Innovation Divide*, in which it was found that in the past decade, European drug makers placed their R&D in the United States versus in local expansion by a two-to-one margin).

¹⁹³ G.I.R.A., *supra* note 83, Third Schedule (depreciation allowance), § 19 (deductions for research and development expenditures).

¹⁹⁴ For example, by 1998, over 100 countries had tax holidays. Avi-Yonah, *supra* note 164, at 1577. *See, e.g.*, ZMARAK SHALIZI, LESSONS OF TAX REFORM 23 (1991).

¹⁹⁵ G.I.R.A., *supra* note 83, §11 (Industry Concessions) & First Schedule, Part II (Rates of Income Tax Upon Companies). Although tax holidays are limited in duration, insufficient enforcement prevents the IRS from curbing instances in which companies facing expiring tax holidays simply dissolve and reincorporate under a different name to restart the clock. Interview with Kweku Ackaah-Boafo, Esq. (Feb. 6, 2004) (Discussing Canadian Bogosu Resources, a mining company operating in Ghana which reincorporated as Billington Bogusu Gold Limited and again five years later as Bogusu Gold Limited, in order to avail itself of tax benefits that otherwise would have expired).

¹⁹⁶ G.I.R.A., *supra* note 83, First Schedule.

depriving LDCs of much-needed revenue.¹⁹⁷ The elimination of income taxation on corporate taxpayers, coupled with the pressure to reduce taxes on international trade, has created critical revenue shortfalls in many countries.¹⁹⁸ Nevertheless, new tax incentives continue to be introduced in both developed and less developed countries around the world,¹⁹⁹ often in response to private sector lobbying.²⁰⁰ Some recent examples include the introduction of a free zone in the United Arab Emirates,²⁰¹ a five-year exemption period for audit, accounting, and law firms in Singapore,²⁰² and a ten-year corporate tax holiday for income from investments of at least €150 million in Turkey.²⁰³

As a result of these kinds of initiatives, U.S. multinationals may face little or no income taxation on income

¹⁹⁷ See, e.g., Janet Stotsky, *Summary of IMF Tax Policy Advice*, in TAX POLICY HANDBOOK 279, 282 (Parthasarathi Shome, ed., International Monetary Fund 1995) (stating that tax incentives “have proved to be largely ineffective, while causing serious distortions and inequities in corporate taxation.”); SHALIZI, *supra* note 194, at 60 (“The use of so-called tax expenditures (tax preferences and exemptions to promote specific economic and social objectives) should, in general, be deemphasized.”). This is a reversal of position for the World Bank, which at one point encouraged LDCs to offer tax incentives to attract foreign investment and was concerned with the effect elimination of tax incentives might have on its assistance projects. Stewart, *supra* note 11 at 169; SHALIZI, *supra* note 194, at 68-69. The World Bank has since “recommended the removal or tightening of incentives in Argentina (1989), Bangladesh (1989), Brazil (1989), Ghana (1989), and Turkey (1987), among others.” SHALIZI, *supra* note 195, at 69. Tax incentives are also contrary to WTO rules prohibiting tax subsidies. See WTO Agreement on Subsidies and Countervailing Measures, Apr. 14, 1994, Annex 1A, Art. 1, ¶ 1.1. However, these provisions are rarely enforced with respect to LDCs. See Reuven S. Avi-Yonah & Martin B. Tittle, *Foreign Direct Investment in Latin America: Overview and Current Status* 26-28 (2002), available at http://www.iadb.org/INT/Trade/1_english/2_WhatWeDo/Documents/d_TaxDocs/2002-2003/a_Foreign%20Direct%20Investment%20in%20Latin%20America.pdf.

derived in LDCs. The impact of tax treaties on activities giving rise to such income is therefore minimized, as double taxation, and even single taxation, is avoided through unilateral tax rules. However, even if home or source countries nominally impose taxation on multinationals, widespread tax avoidance and evasion neutralizes these taxes. Tax treaties appear to have little effect in these circumstances.

3. Reduced Taxation Through Tax Avoidance and Evasion

In the event that deferral or tax incentives are not available, multinational companies manage their worldwide tax exposure by using tax planning techniques to shift income to low- or no-tax jurisdictions through earnings stripping, transfer pricing, thin capitalization, and similar means of tax avoidance and, in the extreme, tax evasion.²⁰⁴ For example, U.S. multinationals typically use over- and under-invoicing to assign foreign profits to subsidiaries in tax havens.²⁰⁵ As a result, firms can increasingly make physical location decisions that are largely independent of tax-related business decisions,

²⁰⁴ See Reuven S. Avi-Yonah, *The Rise and Fall of Arm's Length: A Study in the Evolution of U.S. International Taxation*, 15 VA. TAX REV. 89, 95 (1995) ("Transfer pricing manipulation is one of the simplest ways to avoid taxation."); David Harris, Randall Morck, Joel Slemrod & Bernard Yeung, *Income Shifting in U.S. Multinational Corporations*, in STUDIES IN INTERNATIONAL TAXATION 277, 301 (Giovannini et al. eds., 1993); James R. Hines, Jr., *Tax Policy and the Activities of Multinational Corporations*, in FISCAL POLICY: LESSONS FROM ECONOMIC RESEARCH 401, 414-15 (Alan J. Auerbach ed., 1997). The line between tax avoidance and tax evasion is murky. Tax avoidance generally refers to lawful attempts to minimize taxation, as Judge Learned Hand famously noted in *Comm'r v. Neuman*, 159 F.2d 848, 850-51 (2d Cir. 1947) (Hand, J., dissenting) ("Over and over again courts have said that there is nothing sinister in so arranging one's affairs as to keep taxes as low as possible. Everybody does so, rich or poor; and all do right, for nobody owes any public duty to pay more than the law demands . . ."). Tax evasion generally encompasses the unlawful and fraudulent avoidance of tax accomplished by hiding taxable income and assets from taxing authorities.

²⁰⁵ See Council of the European Union, *Final Draft Report of the Ad hoc Working Party on Tax Fraud* 16-17 (Brussels, April 27, 2000). Direct tax fraud is typically committed through false invoicing, under- and over-invoicing, non-declaration of income earned in foreign jurisdictions, and "use by taxpayers of a fictitious tax domicile, with the purpose to evade fulfilling their tax obligations in their country of domicile for tax purposes." *Id.* at 4-5. See also Martin A. Sullivan, *U.S. Multinationals Move More Profits to Tax Havens*, 2004 WTD 31-4 (Feb. 9, 2004) (although they comprise just 13% of productive capacity and 9% of employment, subsidiaries of U.S. multinationals located in the top eleven tax havens were assigned 46.3% of foreign profits in 2001); HOOKE, *supra* note 124, at 86-87 (suggesting that to control costs, it is "sound operating procedure" for a foreign investor of an export platform in a LDC to interpose an offshore bank, and overcharge the foreign company for imported supplies and management fees to reduce income in the source country).

shifting profits to the most advantageous tax destination.²⁰⁶ Efforts by governments to curb such practices are abundant²⁰⁷ but largely ineffective²⁰⁸ in the face of efforts by taxpayers to engage in them.²⁰⁹

In LDCs such as Ghana, where enforcement of the tax law has been relatively less of a focus than reform of the tax law, tax authorities are all but helpless against these practices.²¹⁰ It is popularly said that Ghanaian companies keep three sets of books: one for the banks, showing large profits so as to secure financing; one for the Ghanaian Internal Revenue Service (IRS), showing large losses so as to avoid paying taxes; and one set, very closely-guarded by the owners, that contains the most accurate information.²¹¹ There is no official data available regarding whether, and to what extent, U.S.

²⁰⁶ See Christoph Spengel & Anne Schäfer, *International Tax Planning in the Age of ICT*, ZEW Discussion Paper No. 04-27 (2004), available at <http://ssrn.com/abstract=552061> (arguing that information and commercial technology makes geographic distance “less relevant” and allows companies to choose location and form of investment on the basis of international tax differentials).

²⁰⁷ Transfer pricing rules are a common feature in the tax systems of most countries, as are rules denying deductions for interest and royalties in certain cases and rules requiring a certain combination of debt and equity (thin capitalization rules). See HUGH J. AULT AND BRIAN J. ARNOLD, *COMPARATIVE INCOME TAXATION: A STRUCTURAL ANALYSIS* 420-28 (1997).

²⁰⁸ In the U.S., the transfer pricing rules are long and complicated and constantly evolving, but still considered inadequate in preventing profit-shifting, as are U.S. earnings- and interest-stripping rules. See, e.g., I.R.C. § 163(j) (2005). These rules are essentially thin capitalization rules, each of which are similarly limited in their success in curbing avoidance of U.S. taxation. For an overview of U.S. efforts to control transfer pricing, see generally Avi-Yonah, *supra* note 204. For a recent example of the failure of interest stripping rules, consider the growing use of Canadian Income Funds to avoid the application of I.R.C. § 163(j) (2000). See, e.g., Jack Bernstein & Barbara Worndl, *Canadian-U.S. Cross-Border Income Trusts: New Variations*, 34 *TAX NOTES INT'L* 281, 283 (April 19, 2004).

²⁰⁹ See, e.g., Shay, *Exploring Alternatives*, *supra* note 188, at 36 (“The drive on the part of taxpayers, multinational and others, to push down effective tax rates has accelerated in recent years.”).

²¹⁰ See Stewart, *supra* note 11, at 181.

²¹¹ Interview with Margaret K. Insaiddo, Justice, High Court of Ghana, in Ghana (Dec. 9, 2003) (on file with author); Interview with Bernard Ahafor, Attorney, Private Practice, in Ghana (Dec. 2, 2003) (on file with author); Interview with Sefah Ayebeeng, Chief Inspector of Taxes, Internal Revenue Service, in Ghana (Dec. 11, 2003) (on file with author). The implication is that firms keep separate books in an attempt to defraud the government, rather than in the ordinary course of keeping separate tax and cost accounting books, for which there is generally no statutory proscription. See, e.g., CHARLES E. HYDE & CHONGWOO CHOE, *KEEPING TWO SETS OF BOOKS: THE RELATIONSHIP BETWEEN TAX & INCENTIVE TRANSFER PRICES*, <http://ssrn.com/abstract=522623> (arguing that keeping two sets of books with respect to transfer pricing is “not only legal but also typically desirable” for many MNEs).

multinationals take advantage of enforcement weaknesses.²¹² Ghana recently introduced a Large Taxpayers Unit to curtail tax evasion, but the Ghanaian IRS relies on the good faith of company officials and their independent auditors because the resources are lacking to perform audits on all but a few companies.²¹³ Given that the overall tax compliance rate is estimated to be less than 20% in Ghana, good faith appears to be rather elusive.²¹⁴

As a consequence of tax avoidance and evasion strategies, income is often exempt from taxation even if tax nominally applies in the residence country, the source country, or both. In such a taxing environment there is little taxation, let alone double taxation, to be relieved by treaty. Governments are not unaware of the problem. Tax avoidance and evasion has typically been addressed in treaties through information sharing provisions, in which the respective taxing jurisdictions agree to assist each other in collecting revenues.²¹⁵

²¹² Anecdotal evidence that multinationals are thought to evade taxation where possible is not lacking, however. See, e.g., Sirena J. Scales, *Venezuela Temporarily Closes McDonald's Nationwide*, 2005 WTD 26-11 (Feb. 9, 2005) ("Venezuela's Tax Agency (SENIAT) has temporarily closed all 80 McDonald's restaurants in the nation, citing failure to comply with tax rules . . .").

²¹³ Seth E. Terkper, *Ghana Establishes Long-Awaited Large Taxpayer Unit*, 2004 WTD 64-10 (Apr. 2, 2004). A mid-size taxpayers unit is also in the planning stages. Ayebe, *supra* note 211. A more effective audit process may not be sufficient to induce increased compliance, however. A recent empirical study about Australian investors that were accused of engaging in abusive tax transactions argues that taxpayers' level of trust regarding the fairness, neutrality, and respect accorded to them by the revenue authorities was correlated to their level of voluntary compliance, and that although trust alone should not be relied upon in enforcing a tax system, "a regulatory strategy that combines a preference for trust with an ability to switch to a policy of distrust is therefore likely to be the most effective." Kristina Murphy, *The Role of Trust in Nurturing Compliance: A Study of Accused Tax Avoiders*, 28 LAW & HUM. BEHAV. 2, 187, 203 (2004). In an interesting twist, South Korea recently announced that domestic and foreign companies meeting target job creation goals will be free from audits in 2004 and 2005 under a new tax incentive program. James Lim, *South Korea Offering Companies that Create Jobs Shield from Audits*, 34 Daily Tax Rep. (BNA) G-3 (Feb. 23, 2004).

²¹⁴ The compliance rate is an estimate of Ghanaian IRS officials and not an official government statistic. Ayebe, *supra* note 211 (estimating compliance at less than 20%); Interview with Fred Agyarkwa, Official, Internal Revenue Service, in Ghana (Dec. 11, 2003) (estimating it at 17%).

²¹⁵ The U.S. Model requires contracting states to exchange all relevant information to carry out the provisions of the tax treaty or the domestic laws of the states concerning taxes covered by the treaty, including assessment, collection, enforcement, and prosecution regarding taxes covered by the Convention. See U.S. MODEL, *supra* note 56, art. 26, ¶ 1. It also calls for treaty override of domestic bank secrecy or privacy laws. The OECD Model does not include the assessment/collection language but extends the scope of taxes to "every kind and description imposed on behalf of the contracting states." See OECD MODEL, *supra* note 21, art. 26, ¶1. It does not include an equivalent to the U.S. Model's secrecy law override. The UN Model

These provisions have a perhaps unintended consequence, however. Introduction of a tax treaty may decrease investment, as investors seek to avoid the implementation of the information sharing provisions that have become standard in tax agreements.²¹⁶

The intersection of the taxation of portfolio interest and U.S. interest reporting rules illustrates this tension. The U.S. is a potential tax haven for foreign investors because of its zero tax on portfolio interest and rules under which banks are generally not required to report interest payments made to nonresident aliens.²¹⁷ Efforts to require interest payment reporting have consistently met strong resistance by the private sector, which argues that such rules would “hinder tax competition between nations” and “undermine [the] global shift to lower tax rates and international tax reform.”²¹⁸ Several members of Congress echo these sentiments, arguing that expanded reporting rules “would likely result in the flight of hundreds of billions of dollars from U.S. financial institutions” and could cause “serious, irreparable harm to the U.S. economy.”²¹⁹ The implication is that while the U.S. does not

limits assistance to taxes covered by the Convention as in the U.S. Model, and explicitly adds that information exchange is intended to prevent fraud or evasion of taxes. See UN MODEL, *supra* note 78, art. 26, ¶ 1.

²¹⁶ Bruce A. Blonigen & Ronald B. Davies, *The Effects of Bilateral Tax Treaties on U.S. FDI Activity* (Nat'l Bureau of Econ. Research, Working Paper No. 8834, 2002), available at <http://www.nber.org/papers/w8834> (showing a decrease in foreign investment upon the introduction of a tax treaty and suggesting that such decrease may be the result of the dampening effect tax treaties may have on tax evasion due to information sharing provisions); Ronald B. Davies, *Tax Treaties, Renegotiations, and Foreign Direct Investment* (University of Oregon Economics, Working Paper No. 2003-14, 2003), available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=436502 (“[t]reaties have either a zero or even a negative effect on FDI” because they dampen the ability of businesses to engage in tax evasion activities, especially through transfer pricing).

²¹⁷ I.R.C. §§ 871(h), 882(a), (c) (2005); Treas. Reg. § 1.6049-5 (1983). Canadian residents are a current exception to the interest reporting rules, Treas. Reg. § 1.6049-8(a) (1996), and proposed regulations would extend the reporting requirements to include all interest over \$10 paid to any nonresident alien individual. Prop. Treas. Reg. § 1.6049-8(a), 67 Fed. Reg. 50389 (Aug. 2, 2002).

²¹⁸ Katherine M. Stimmel, *Free Market Interest Groups Urge Treasury to Withdraw Alien Interest Reporting Rules*, 16 Daily Tax Rep. (BNA) G-2 (Jan. 27, 2004).

²¹⁹ Alison Bennett, *House Lawmakers Ask Bush to Withdraw IRS Interest Reporting Rules for Aliens*, 69 Daily Tax Rep. (BNA) G-8 (Apr. 10, 2002). See also Sen. Gordon Smith (R-Ore.), Letter on Proposed Nonresident Alien Interest Reporting Rules (REG-133254-02) to Treasury Secretary John Snow, TaxCore (BNA) (Feb. 20, 2003) (urging Treasury not to move forward with interest reporting rules because it “would drive the savings of foreigners out of bank accounts in the United States and into bank accounts in other nations,” and expressing the Senator’s failure to understand “why we put the enforcement of other nations’ tax laws as a priority at Treasury”).

condone tax evasion, there has emerged no political will strong enough to counter the private interests benefiting from the rules as they currently exist.²²⁰

Similar sentiments may exist in the context of tax treaties, especially when the partner country, as in the case of Ghana, has a very limited ability to enforce the tax laws prior to the introduction of a treaty. If foreign investors are able to avoid taxation in Ghana, for instance through aggressive tax planning, a tax treaty that requires or permits Ghana to provide tax information to the U.S. taxing authority may not be welcome.²²¹

4. Reduced Taxation Through Tax Sparing

The proliferation of tax incentives and tax holidays in LDCs, coupled with deferral in the U.S. and tax avoidance opportunities in both countries, limits the need for tax treaties to relieve double taxation. Since the 1950s, tax sparing has been promoted as a way to use tax treaties to increase investment to targeted LDCs, even in the absence of double taxation.²²² Tax sparing prevents residence-country taxation of income exempted from tax by source countries,²²³ by providing

²²⁰ Perhaps recent efforts to create a multinational task force to combat abusive tax-avoidance can provide the pressure needed to reform this long standing impasse. See Sirena J. Scales, *Multination Task Force Created to Combat Abusive Tax Avoidance*, 2004 TNT 81-4 (Apr. 26, 2004).

²²¹ Moreover, to the extent that a U.S. tax treaty coordinates transfer pricing rules, a treaty might increase the taxation of a multinational that could otherwise benefit from conflicting domestic standards.

²²² See generally OECD, *TAX SPARING: A RECONSIDERATION* (1998) [hereinafter *TAX SPARING*]. Recent literature on tax sparing includes Brown, *supra* note 7; Damian Laurey, *Reexamining U.S. Tax Sparing Policy with Developing Countries: The Merits of Falling in Line with International Norms*, 20 VA. TAX REV. 467, 483 (2000) (arguing that LDCs “need tax holidays to attract foreign investment,” and therefore tax sparing is requisite to counter the effect of residual home country taxation under tax treaties). Tax sparing is also defended as justifiable on grounds of capital import neutrality, on the basis that it allows American multinationals to compete with companies from other exemption-providing countries in the global marketplace. See discussion *infra* notes 225-26 and accompanying text. However, tax sparing violates the concept of capital export neutrality, and has been consistently rejected by the Treasury Department on the grounds that tax treaties are supposed to relieve double taxation, not eliminate taxation altogether, and that tax treaties are not meant to provide benefits to U.S. persons.

²²³ Tax sparing was first introduced in the U.K. by the British Royal Commission, which prepared a report in 1953 recommending tax sparing as a means of “aiding British investment abroad.” *TAX SPARING*, *supra* note 222, at 15. Rejected by the U.K. in 1957 after several years of debate, tax sparing was enabled in U.K. tax treaties as a result of legislative action in 1961. *Id.* The purpose of the legislation was

that if a source country refrains from taxing income derived in its jurisdiction (usually pursuant to a tax holiday), the residence country nevertheless grants a tax credit for the nominally imposed tax.²²⁴

Thus, under tax sparing, two taxing jurisdictions cooperate to exempt multinational companies from income taxation in both countries. Although similar effects could be accomplished unilaterally by residence countries,²²⁵ tax sparing is generally seen as a mechanism that should be offered in the context of a tax treaty, as a measure to encourage foreign investment to selected LDCs.²²⁶ Tax sparing has particularly been promoted as a vehicle for investment and aid to the nations of Sub-Saharan Africa.²²⁷

There is little evidence, however, that tax sparing increases foreign investment.²²⁸ On the contrary, tax sparing could potentially *decrease* investment in LDCs, since it enables foreign investors to repatriate earnings that they would otherwise leave abroad under the protection of deferral.²²⁹ As

“enabling the UK to give relief to developing countries for taxes spared under foreign incentive programmes.” *Id.*

²²⁴ Many examples and explanations of tax sparing exist. For an overview of tax sparing, see generally Richard D. Kuhn, *United States Tax Policy with Respect to Less Developed Countries*, 32 GEO. WASH. L. REV. 261 (1963).

²²⁵ For example, the U.S. could expand the definition of a creditable tax to include certain nominally-imposed taxes. See, e.g., Paul R. McDaniel, *The U.S. Tax Treatment of Foreign Source Income Earned in Developing Countries: A Policy Analysis*, 35 GEO. WASH. INT'L L. REV. 265, 268-69 (2003).

²²⁶ See, e.g., Brown, *supra* note 7; Laurey, *supra* note 222 (suggesting proposals regarding the use of tax treaties to implement foreign aid initiatives by encouraging foreign investment through tax sparing). See also J. Clifton Fleming, Jr., Robert J. Peroni & Stephen E. Shay, *Fairness in International Taxation: The Ability-to-Pay Case for Taxing Worldwide Income*, 5 FLA. TAX REV. 299, 347 (2001) (suggesting that limiting tax sparing to its use in tax treaties “would allow appropriate distinctions to be made among nations and would assist the United States in negotiating appropriate reciprocal tax concessions for its residents”).

²²⁷ Brown, *supra* note 7, at 83 (arguing for tax sparing in tax treaties specifically with Sub-Saharan Africa).

²²⁸ See McDaniel, *supra* note 225, at 284 (providing an overview of the conflicting economic literature regarding the interaction of tax sparing and FDI).

²²⁹ See, e.g., Peroni, *supra* note 67, at 469 (deferral encourages “[r]etention and reinvestment of earnings by [foreign companies]”); see also Laurey, *supra* note 222, at 484-85 (tax sparing would “allow U.S. multinationals to repatriate earnings based on business needs instead of on adverse tax consequences”). In a 2003 study of the annual filings of the companies in the S&P 500, it was found that such companies had accumulated over \$500 billion in un-repatriated foreign earnings. ANNE SWOPE, BRUCE KASMAN & ROBERT MELLMAN, BRINGING IT ALL BACK HOME: REPATRIATION LEGISLATION'S FINAL LAP (2004), <http://www.morganmarkets.com>. This figure represents a trend of ever-increasing “trapped” foreign profits. Conversely, by acting as an incentive to repatriate capital, tax sparing may be advantageous to the U.S. economy even though it has long been rejected for policy reasons. For example, in the

such, tax sparing appears fundamentally inconsistent with the goal of using tax treaties to increase investment flows from developed to less developed countries.

Moreover, tax sparing increases tax competition by creating an additional disadvantage for countries that do not have tax holidays, while leaving countries that have a tax holiday in effect in the same or worse position as they were when only deferral was available.²³⁰ The OECD has initiated efforts to combat what it terms “harmful tax practices”—in essence, any tax regime that undermines residence-based taxation by providing tax breaks and refusing to cooperate in information sharing.²³¹ Persisting in the allowance of deferral and tax holidays while promoting tax sparing seems equally inconsistent with the treaty-related goal of protecting residence-based tax bases.

Foreseeing that the ratification of any treaty with tax sparing would prompt a surge of lobbying by U.S. multinationals seeking the expansion of such provisions to other countries, the U.S. has been unequivocal in its rejection of these provisions.²³² While the potentially negative impact on investment in LDCs is one valid reason why tax sparing should continue to be rejected, the primary position of the U.S. has been that tax sparing inappropriately allows the reduction of U.S. taxation of U.S. persons, a result specifically precluded by all U.S. treaties currently in force.²³³

context of the repeal of I.R.C. § 114 (a tax exemption for certain foreign earnings that was found to be in violation of WTO standards), legislators enacted a temporary reduction in the rate of tax imposed on repatriated profits, citing in support the need to direct capital back to the U.S. in the quest to create jobs and boost the economy. *See* American Jobs Creation Act of 2004, P.L. 108-357, H.R. 4250, Sec. 101(a) (repealing I.R.C. § 114) and Sec. 965 (enacting temporary dividends-received deduction). *See also* STAFF OF THE COMM. ON WAYS AND MEANS, 108th CONG., Short Summary of Conference Report 108-755 2 (October 7, 2004), *available at* <http://waysandmeans.house.gov/legis.asp?formmode=read&id=2117> (last visited Nov. 26, 2005) (Section 956 “[e]ncourages companies to reinvest foreign earnings in the United States”).

²³⁰ *See, e.g.*, Margalioth, *supra* note 82, at 198.

²³¹ *See generally* STAFF OF THE OECD FISCAL AFFAIRS COMM., THE OECD’S PROJECT ON HARMFUL TAX PRACTICES: THE 2004 PROGRESS REPORT (2004).

²³² Tax sparing was contemplated but ultimately rejected in tax treaties with Egypt, India, and Israel, largely due to the efforts of Stanley Surrey, who argued vigorously against the provision. *See* Laurey, *supra* note 222, at 475-76. Tax sparing was also introduced in a tax treaty with Pakistan, but a subsequent change in Pakistan law rendered the provision obsolete and the treaty entered into force without it. STAFF OF S. FOREIGN RELATIONS COMM., 85th CONG., REPORT ON DOUBLE TAX CONVENTIONS, S. Exec. Rpt. No. 1, 85-2, ¶ 3 (1958).

²³³ This rule is enforced under the “saving clause” found in all U.S. tax treaties. *See, e.g.*, U.S. MODEL, *supra* note 56, art. 1, ¶ 4.

Some LDCs, notably those in Latin America, have terminated tax treaty negotiations with the U.S. over the issue of tax sparing.²³⁴ However, the U.S. position on tax sparing is only “one of several obstacles in the way of U.S.-developing country tax treaties.”²³⁵ In fact, tax sparing is largely unnecessary in the quest for complete non-taxation. As discussed above, tax holidays granted by LDCs to investors from deferral-granting countries, such as the U.S., are effective in providing double non-taxation so long as capital is reinvested rather than repatriated.²³⁶

C. Domestic Tax Rates Equal to or Better Than Treaty Rates

In treaties between developed countries, domestic tax regimes are often significantly different than treaty-based tax regimes.²³⁷ This is especially the case with respect to tax rates on passive income paid to foreign persons, which are typically much higher under domestic statutes than under tax treaties.²³⁸ LDCs, however, increasingly impose tax rates that are much closer to, and in some cases are less than, the typical rates provided in treaties.

For example, dividends paid to foreign shareholders would normally be subject to a 10% tax in Ghana, unless the company paying the dividend operates in a free zone, in which case the tax rate may be zero.²³⁹ Thus, Ghana's statutory tax rate is the same as or less than what would be expected under

²³⁴ Laurey, *supra* note 222, at 471, 493 (many LDCs have “refused to sign U.S. tax treaties that do not contain tax sparing clauses,” especially those in Latin America because this region “resents the U.S. [residence-based] tax policy”).

²³⁵ McDaniel, *supra* note 225, at 292.

²³⁶ Tillinghast, *supra* note 62, at 477.

²³⁷ Some countries have incorporated treaty concepts into their domestic laws. For example, permanent establishment thresholds that parallel or closely follow the OECD model treaty definition have long been the domestic rule in Japan, the Netherlands, Sweden, Germany, and France. AULT & ARNOLD, *supra* note 207, at 432-34 (1997).

²³⁸ OECD Model rates do not exceed 15% for dividends, 10% for interest, and 0% for royalties. OECD MODEL, *supra* note 21, arts. 10-12. In contrast, maximum statutory tax rates in OECD countries average 18%, 14%, and 16% on dividends, interest, and royalties, respectively. See generally Ernst & Young, *supra* note 35 (calculations on file with author).

²³⁹ Ghana currently imposes a 10% tax on most dividends paid to nonresidents, but provides tax incentives, including exemptions of taxation on passive income paid by domestic companies to foreign investors, as described above. See G.I.R.A., *supra* note 83, § 2, Schedule I, Part V (2000); see also *supra*, text accompanying notes 195-97.

the hypothetical U.S.-Ghana treaty outlined above.²⁴⁰ In addition, Ghana's internal rate is lower than the 15% maximum provided in the U.S. Model for regular dividends.²⁴¹ Nevertheless, it is higher with respect to direct dividends than the maximum 5% provided in the U.S. Model and the zero rate for dividends paid to foreign controlling company shareholders found in new treaties.

Because most dividends paid out of Ghana would likely constitute direct dividends, many of which would be paid to controlling shareholders,²⁴² a treaty rate that followed the U.S. Model or recent U.S. treaty practice would reduce taxation on U.S. investors in Ghana from the internal rate of 10% (or zero)²⁴³ to 5% or zero. However, as discussed above, if U.S. tax treaty precedent is followed, it is unlikely that a U.S.-Ghana tax treaty would provide for these lower rates. In fact, if, pursuant to the U.S. Model, a U.S.-Ghana tax treaty provided for regular dividend taxation lower than 10%, direct dividend taxation at 5%, and no source-country taxation of interest and royalties, it would be the first and only U.S. tax treaty to do so with any country, developed or less developed.²⁴⁴

If, as a "concession" to Ghana, the U.S. provided that instead of a maximum 5% rate for direct dividends, the maximum source-country rate would be 10%, the only result would be that Ghana's statutory 10% rate would be maintained.²⁴⁵ No benefit in the form of reduced taxation would be realized under this agreement. In fact, if the recently concluded U.S.-Sri Lanka treaty serves as a model, a U.S.-

²⁴⁰ See *supra* Part III.B.

²⁴¹ U.S. MODEL, *supra* note 56, art. 10.

²⁴² See *supra*, text at note 189.

²⁴³ The rate depends on whether the payment derives from sources protected by a free zone or tax holiday regime.

²⁴⁴ The closest rates to these are found in the treaty with Russia, which provides for source-country tax rates of 10% on regular dividends, 5% on direct dividends, and 0% on interest and royalties. Convention for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Income and Capital, U.S.-Russ., arts. 10-12, June 17, 1992, K.A.V. 3315 [hereinafter U.S.-Russia Treaty]. See INTERNAL REVENUE SERVICE, U.S. DEP'T OF THE TREASURY, PUBL'N NO. 901, U.S. TAX TREATIES 33-34 (Rev. May, 2004) [hereinafter U.S. TAX TREATIES] (providing rate information in other treaties). Note that although the IRS published this document in May, 2004, it has no information regarding the U.S. tax treaty with Sri Lanka, which was signed on March 14, 1985, because it did not enter into force until June 13, 2004. See *generally id.* See also U.S.-Sri Lanka Treaty, *supra* note 4.

²⁴⁵ The treaty with Ghana would be one of six U.S. treaties with a top 10% rate for dividends. See U.S. TAX TREATIES, *supra* note 244, at 33-34 (providing 10% as the maximum tax rate on dividends in U.S. tax treaties with China, Japan, Mexico, Romania, and Russia).

Ghana treaty could even provide for maximum rates that are *higher* than Ghana's internal rates, though again this could hardly benefit current or potential investors.²⁴⁶

Similarly, Ghana's statutory rates of 5 to 10% on interest and 15% on rents and royalties²⁴⁷ comport with the average respective rates offered under other U.S. treaties, although the U.S. Model contemplates zero source taxation of both.²⁴⁸ Just as in the case of direct dividends, preserving a higher rate of tax would be likely under UN Model standards, but would generally be a neutral factor for investors.

Concessions that allow for higher source-country taxation of passive income items reflect the concerns addressed by the UN Model regarding the worldwide allocation of tax revenues. These concessions are meant to protect the taxing jurisdiction of capital importing nations like Ghana against the effects of the U.S. and OECD Model treaties, which allocate income away from source and towards residence countries.²⁴⁹ As the case of Ghana illustrates, however, preserving higher source-country taxation is a neutral measure at best. It is also contradictory to the notion otherwise promoted by U.S. policy makers that reducing tax rates will reduce tax barriers to direct investment and thereby increase capital flows between countries.

²⁴⁶ In the U.S. treaty with Sri Lanka, the Joint Committee queries whether this result is intended, and supposes that Sri Lanka could raise its rates up to the maximum 15% provided, thereby increasing its revenues from foreign investment. *See EXPLANATION OF SRI LANKA TREATY, supra* note 135, at 62-63. Yet in the same document, the Committee proclaims that the treaty will be good for the U.S. because it reduces Sri Lankan tax on U.S. investors and provides a clearer framework. *Id.* These two positions are difficult to reconcile, as the Joint Committee appears to recognize.

²⁴⁷ Ghana currently imposes a 10% tax on most interest payments, and a 15% tax on rents and royalties, with alternate rates ranging from 5 to 15% for certain payments, depending on the residence of the recipient and the payor. G.I.R.A., *supra* note 83, ch. I, Part I, §§ 2, 84; First Schedule, Part IV-VIII.

²⁴⁸ With respect to interest, see U.S. MODEL, *supra* note 56, art. 11. Thirty-one existing U.S. treaties, including several of the most recently signed treaties and protocols, reflect the goal of zero source-based taxation of interest, rents, and royalties. *See, e.g.,* U.S.-Japan Treaty, *supra* note 155, art. 11; Australia Protocol, *supra* note 154, art. 7; U.S.-U.K. Treaty, *supra* note 156, art. 11. Interest tax rates range from 5 to 30% in the remaining treaties. U.S. TAX TREATIES, *supra* note 244. With respect to royalties, see U.S. MODEL, *supra* note 56, art. 12. Twenty-six existing U.S. treaties, including several of the most recently signed treaties and protocols, provide zero source-country tax on most royalties. *See, e.g.,* U.S.-Japan Treaty, *supra* note 155, art. 12; U.S.-U.K. Treaty, *supra* note 156, art. 12. As in the case of interest, royalty tax rates range from 5 to 30% in the remaining treaties. U.S. TAX TREATIES, *supra* note 244, at 33-34.

²⁴⁹ *See supra* notes 135-36 and accompanying text.

To date there is no consensus regarding the appropriate balance of attracting investment through lower tax rates and preserving the allocation of revenue to source countries.²⁵⁰ Preserving source-country revenues has been prioritized on the grounds that low taxation has a deleterious effect on infrastructure. In LDCs, providing adequate infrastructure to attract multinationals has been a continuous challenge that is further complicated by tax competition, a phenomenon that is not alleviated by tax treaties.

D. Inadequate Infrastructure and Non-Tax Barriers

U.S. investors may be significantly influenced in their investment location decisions by broad infrastructure-related criteria such as the rule of law and the protection of property, as well as the immediate need for a suitable workforce and adequate physical infrastructure.²⁵¹ The need for a suitable workforce in turn necessitates basic infrastructure including institutions such as schools and health care systems. In direct tension with these needs is the diminishing ability of LDCs to finance infrastructural development as they decrease taxes on business profits.

Many countries, including Ghana, offer tax incentives such as tax holidays and tax-free zones because attracting investment to sustain economic development is deemed of greater importance than protecting tax revenues.²⁵² However, there is little consensus regarding the effectiveness of tax incentives and tax holidays in actually attracting foreign investment. Anecdotal evidence from various countries suggests that providing tax incentives to attract foreign investment has failed to deliver the promised benefits.²⁵³ Despite a plethora of tax holidays and other tax incentives, few

²⁵⁰ See, e.g., UN MODEL, *supra* note 78, art. X-XII (illustrating the lack of consensus through the omission of standard rates).

²⁵¹ HOOKE, *supra* note 124, at 47-49. For example, a stable macroeconomic environment and a well-educated workforce are two factors that correlate with greater foreign investment flowing into LDCs. UNCTAD, *supra* note 2, at 23.

²⁵² Brian J. Arnold & Patrick Dibout, *General Report*, 55 Cahiers De Droit Fiscal International 25, 28 (2001) ("Certain countries . . . are more concerned with attracting activity and investment of the multinationals in order to sustain their economic development.").

²⁵³ See, e.g., Tamas Revesz, *EU, Companies Urge Reform of Hungary's Local Industry Tax*, 2004 WTD 97-10 (May 14, 2004) ("Although Slovakia offered big investment subsidies and tax relief for foreign investors, its budget is in ruins, and the resulting forced cuts in government spending (especially transfers to households) have triggered serious hunger riots among the most seriously hit Roma population.").

permanent employment opportunities have been created, and exports have failed to increase in the many free zones located throughout West Africa, including Ghana.²⁵⁴ According to John Atta-Mills, former Commissioner of the Ghanaian IRS, “experience shows that tax holidays and tax reductions are ranked very low in the priority of investors in their choice of location for their business,” and that product demand, a skilled workforce, and infrastructure are more important to businesses.²⁵⁵

Economic evidence regarding the connection between taxation and foreign investment provides little additional certainty. A number of economic studies indicate that multinationals are very sensitive to tax considerations, and therefore corporate location decisions may be heavily influenced by tax regimes in source countries.²⁵⁶ However, conflicting studies indicate that taxation is not a significant factor in the location decisions of U.S. multinationals.²⁵⁷ Instead, these studies argue that “market size, labor cost, infrastructure quality . . . and stable international relations,” among other considerations, are the most important factors for location decisions.²⁵⁸ Studies focused particularly on foreign investment in Sub-Saharan Africa come to the same conclusion.²⁵⁹

²⁵⁴ Papa Demba Thiam, *Market Access and Trade Development: Key Actors, in TOWARDS A BETTER REGIONAL APPROACH TO DEVELOPMENT IN WEST AFRICA* 97, 101 (John Igue & Sunhilt Schumacher eds., 1999). See also *supra* note 117 (stating that trade data indicates imports from Ghana to the U.S. are currently declining).

²⁵⁵ Seth E. Terkper, *Tax Measures in Ghana's 2004 Budget Inadequate, Opposition Party's Presidential Candidate Says*, 2004 WTD 63-12 (Apr. 1, 2004).

²⁵⁶ For an overview of this economic literature, see Avi-Yonah (2000), *supra* note 164, at 1590-92; James R. Hines, Jr., *Tax Policy and the Activities of Multinational Corporations, in FISCAL POLICY: LESSONS FROM ECONOMIC RESEARCH* 401, 401-45 (Alan J. Auerbach ed., 1997); James R. Hines, Jr., *Lessons from Behavioral Responses to International Taxation*, 52 NAT'L TAX J. 305, 305-22 (1999).

²⁵⁷ See McDaniel, *supra* note 225, at 280 (providing an overview of some of this literature); see also G. Peter Wilson, *The Role of Taxes in Location and Sourcing Decisions, in STUDIES IN INTERNATIONAL TAXATION*, *supra* note 204, at 196-97, 229 (arguing that taxes are more influential in location decisions for administrative and distribution centers, but they “rarely dominate the decision process” in the case of manufacturing locations).

²⁵⁸ McDaniel, *supra* note 225, at 280.

²⁵⁹ See, e.g., Elizabeth Asiedu, *On the Determinants of Foreign Direct Investment to Developing Countries: Is Africa Different?* 1, 6 (2001), available at <http://ssrn.com/abstract=280062> (arguing that location-specific factors such as natural resource availability may make infrastructure and stability of particular importance in the context of investment to Sub-Saharan Africa); World Bank, *WORLD BUSINESS ENVIRONMENT SURVEY 2000*, available at <http://www.ifc.org/ifcext/economics.nsf/Content/ic-wbes> (finding as a result of a survey

In contrast, recent literature suggests that past studies present an incomplete picture of the role of taxation because they have focused on source-country corporate income taxes, the burdens of which are relatively insignificant as compared to the burdens of non-income taxation in source countries.²⁶⁰ As a result, these past studies may have obscured the more significant influence of non-income taxation on foreign investment decisions.²⁶¹ Since foreign non-income tax burdens significantly exceed income tax burdens, these taxes may strongly influence the behavior of U.S. multinationals.²⁶² The main explanation given for this influence is that non-income taxation cannot be credited against U.S. residual taxation.²⁶³

The findings of this literature are consistent with earlier studies that suggest the relative importance of taxation in a particular country may be increasing with the availability of opportunities for avoiding taxation elsewhere.²⁶⁴ However, these findings conflict with other studies demonstrating that multinationals can use debt financing and transfer pricing manipulation to achieve tax neutrality in investment location decisions,²⁶⁵ and that despite earlier studies showing a connection between tax and foreign direct investment, non-tax

of business including Ghana and fifteen other Sub-Saharan African countries that firms investing in these regions indicate less sensitivity to taxation than to corruption, infrastructure, crime, inflation, financing, and political stability).

²⁶⁰ Mihir A. Desai, C. Fritz Foley & James R. Hines Jr., *Foreign direct investment in a world of multiple taxes*, 88 J. PUB. ECON. 2727, 2728 (2004) ("Foreign indirect tax obligations of American multinational firms are more than one and a half times their direct tax obligations."). In previous studies, James Hines found a "small but significant" link between lower source-country taxes and foreign investment levels. See McDaniel, *supra* note 225, at 281; see also Avi-Yonah, *supra* note 164, at 1644.

²⁶¹ See Desai, *supra* note 260, at 2728.

²⁶² See *id.* at 2729.

²⁶³ *Id.* at 2728 ("The role of non-income taxes may be particularly important for FDI, since governments of many countries (including the United States) permit multinational firms to claim foreign tax credits for corporate income taxes paid to foreign governments but do not extend this privilege to taxes other than income taxes. As a result, taxes for which firms are ineligible to claim credits may well have greater impact on decision-making than do (creditable) income taxes."). For an argument that the definition of creditable taxes should be broadened to encompass many non-income taxes, see generally Glenn E. Coven, *International Comity and the Foreign Tax Credit: Crediting Nonconforming Taxes*, 4 FLA. TAX REV. 83 (1999).

²⁶⁴ See Grubert, *supra* note 67, at 22, 28 (suggesting that tax rates are extremely important to U.S. multinationals in allocating their foreign direct investment, especially in the case of manufacturing, and that the relative importance of taxes may be increasing).

²⁶⁵ See Avi-Yonah, *supra* note 25, at 1315; GARY CLYDE HUFBAUER, U.S. TAXATION OF INTERNATIONAL INCOME: BLUEPRINT FOR REFORM 134 (1992).

factors dominate the location decisions of multinational firms.²⁶⁶

Given the possibility that taxation may not be an overriding factor in foreign investment location decisions, the influence of infrastructure cannot be ignored. To the extent infrastructure is important to potential investors, efforts to reduce taxation to attract foreign investment may be counterproductive, since raising sufficient revenues is integral to the level of infrastructure a country can offer.²⁶⁷ As tax competition ensures less taxation of multinationals, the ability of LDCs to fund sufficient infrastructure to attract and sustain foreign investment relies more heavily on the ability to tax resident individuals, whether directly or indirectly. Historically, this has been a great challenge for LDCs.²⁶⁸

Compliance rates for income and non-income taxation are typically very low in Ghana. It is estimated that 80% of business is conducted on the informal market—that is, not subject to regulation or taxation because it is conducted in the form of cash or barter.²⁶⁹ Thus, only those who work for the government or for the few companies that comply with wage

²⁶⁶ See Haroldene Wunder, *The Effect of International Tax Policy on Business Location Decisions*, TAX NOTES INT'L, Dec. 24, 2001, at 1331-48.

²⁶⁷ See Nicholas Kaldor, *Will Underdeveloped Countries Learn to Tax?*, 41 FOREIGN AFF. 410, 410 (1963) (stating that “[t]he importance of public revenue to the underdeveloped countries can hardly be exaggerated if they are to achieve their hopes of accelerated economic progress.”). See also H. David Rosenbloom, *Response to: “U.S. Tax Treatment of Foreign Source Income Earned in Developing Countries: Administration and Tax Treaty Issues,”* 35 GEO. WASH. INT'L. L. REV. 401, 406 (2003) (stating that “taxes are, by definition, involuntary exactions”). Thailand has recently taken a slightly different approach. In June, 2004, the Prime Minister, the Ministry of Education, and the Social and Human Development Services Ministry unveiled tax incentives for individuals and companies that make charitable donations to social development programs including education, museums, libraries, art galleries, recreational facilities, children’s playgrounds, public parks, and sports arenas. The government hopes that “[these incentives] will raise funds from the private sector to alleviate the poverty crisis in Thailand.” Sirena J. Scales, *Thai Government Announces Tax Incentives for Charitable Contributions*, 2004 WTD 129-10 (July 6, 2004).

²⁶⁸ Kaldor, *supra* note 267, at 410.

²⁶⁹ The agricultural industry contributes significantly to this number, since over 60% of Ghana’s population is employed in agriculture (a slightly lower percentage than the average of approximately 75% for LDCs in Sub-Saharan Africa). These percentages were compiled by averaging the stated percentage for each LDC in Sub-Saharan Africa from the World Factbook. (Spreadsheet containing data on file with author.) WORLD FACTBOOK, *supra* note 1, available at <http://www.cia.gov/cia/publications/factbook/fields/2048.html>. The informal economy also includes most professionals such as doctors and lawyers, other service providers, and shopkeepers and sellers of goods in local markets. Interview with Justice Insaideo, *supra* note 211; Interview with Sheila Minta, Solicitor/Barrister, Addae & Twum Company, in Accra, Ghana (Dec. 9, 2003) (on file with author).

withholding obligations pay their income taxes.²⁷⁰ An appearance that the laws are not applied uniformly may in turn lead to increased tax avoidance and evasion.²⁷¹ The situation is exasperated in an environment in which corruption or mismanagement of public funds also exists. While Ghana's corruption factor is relatively modest in comparison to many of its neighbors in Sub-Saharan Africa,²⁷² the notion persists that wealth can be acquired by becoming a government official.²⁷³ These perceptions plague the revenue collection efforts of tax agencies in LDCs such as Ghana.²⁷⁴

The ability of LDCs to collect sufficient revenue to fund infrastructure is also challenged by international pressure to

²⁷⁰ Interview with Justice Insaideo, *supra* note 211.

²⁷¹ Murphy, *supra* note 213, at 201 ("perceptions of unfair treatment" appear to affect trust, and "taxpayer resistance could be sufficiently predicated by decreased levels of trust").

²⁷² See Transparency International, *Global Corruption Report 2003*, 215, 220, 225, 264, available at <http://www.globalcorruptionreport.org/gcr2003.html> (suggesting that although the government faces much criticism in failing to address corruption within the civil service, prompting President Kufuor to promise an increase in accountability, Ghana's perceived corruption is much lower than that of many of its neighbors in Sub-Saharan Africa). In extreme comparison stand countries like the Congo, where corruption and bribery at all levels are openly acknowledged as requisite for survival. See Davan Maharaj, *When the Push for Survival is a Full-Time Job*, L.A. TIMES, July 11, 2004, at A1 [hereinafter Maharaj, *Push*] (explaining that while government employees are not paid a salary, they still show up for work every day to collect bribes ranging from "about \$5 for a birth certificate to about \$100 for an import license"). In Benin, a close neighbor to Ghana, bribes collected from traders trying to import illegal goods into Nigeria provide some 15% of the nation's revenues. Davan Maharaj, *For Sale—Cheap: 'Dead White Men's Clothing.'* L.A. TIMES, July 14, 2004, at A1.

²⁷³ The phenomenon appears to exist throughout Sub-Saharan Africa. See Transparency International, *supra* note 272, at 215. In the Congo, people say that "[t]he only ones who have ever gotten rich are the leaders and those with connections." Maharaj, *Push*, *supra* note 272.

²⁷⁴ The perceptions of a few individuals cannot represent national sentiment, nor can such sentiment, even if widespread, indicate the accuracy of the charge. However, a perception of unfairness and corruption may undermine the efficacy of a tax regime. A study to quantify the effect of corruption on tax compliance is underway in Tanzania, but more research is needed in this area. A further issue that may be significant to the tax collection efforts of LDCs is the perceived misuse of funds by the government, whether as a result of corruption or the ineptitude of officials. Informally, this author heard many expressions of dissatisfaction with the ability of the government to provide necessary services to the citizenry. Since that is a common complaint in developed countries as well, I do not deal with it here, but only note its existence as an additional potential difficulty in raising sufficient revenues from individuals. Finally, the extent to which local conditions and attitudes regarding taxation affect the behavior of multinationals is not conclusively established. It may be that multinationals generally conduct their business operations fundamentally in compliance with the laws in force, regardless of the degree to which their compliance is monitored or enforced, simply because their global operations may be subject to scrutiny by other governments or the public. However, evidence proving (or disproving) this theory appears to be lacking in the economic literature.

open markets and reduce trade barriers.²⁷⁵ To the extent that Ghana continues to rely heavily on trade taxes for its revenue, recent developments in tariff reduction at the WTO may cause additional revenue shortfalls in the future. Ghana also faces difficulty in finding consistent resources to fund infrastructure because success in collecting revenues from excise taxes, royalties, dividends, and similar payments may depend on fluctuating global market prices for exported commodities.

Finally, Ghana's ability to fund infrastructure is subject to uncertainty due to its reliance on assistance from foreign donors.²⁷⁶ In 2002, Ghana received large amounts of foreign aid, much of which was connected to the peaceful transition of power through the democratic process. But the amount of aid has fallen recently, and it is expected to continue to decline as finances are directed to other countries or fall off as a result of donor fatigue.²⁷⁷ The consequence is consistent budget shortfalls in Ghana.²⁷⁸ An increase in the overall level of funding by donor countries might alleviate the shortfall.²⁷⁹

²⁷⁵ The transition of the U.S. from an agrarian society "rich in resources but lacking in capital investment" to an industrial one is credited in part to tariffs, without which the transition would have been much slower. See WEISMAN, *supra* note 41, at 14; see also WILLIAM A. LOVETT, ALFRED E. ECKES JR. & RICHARD L. BRINKMAN, U.S. TRADE POLICY: HISTORY, THEORY, AND THE WTO 45 (2004) (finding the current association of free trade with rapid economic growth "incompatible with American economic history," which shows that "[t]he most rapid growth occurred during periods of high protectionism").

²⁷⁶ In Ghana, 17% of total revenue derives from non-tax sources. STATE OF THE GHANAIAN ECONOMY, *supra* note 170, at 26-31. Of this amount 86% (or just under 15% of total revenues) derives from grants. The other 14% derives from receipts from various fees charged by the government for particular services, and from amounts received in divestiture of state-owned enterprises. In this respect, Ghana is somewhat better off than many of the other LDCs in Sub-Saharan Africa, which rely heavily on foreign aid to subsidize their expenditures. For example, 53% of Uganda's budget comes from external loans and grants. See Gumisai Mutume, *A New Anti-poverty Remedy for Africa?*, 16 AFRICA RECOVERY 12 (2003), available at <http://www.un.org/ecosocdev/geninfo/afrec/vol16no4/164povty.htm>.

²⁷⁷ See STATE OF THE GHANAIAN ECONOMY, *supra* note 170, at 30, 34.

²⁷⁸ Ghana's 2002 budget provided for an expected budget deficit of 4.4%. YAW OSAFO-MAAFO, THE BUDGET STATEMENT AND ECONOMIC POLICY OF THE GOVERNMENT OF GHANA, 2002 at 11. Citing "substantial shortfalls in expected foreign inflows," the 2003 budget nevertheless projected a smaller deficit of 3.1% of GDP. YAW OSAFO-MAAFO, THE BUDGET STATEMENT AND ECONOMIC POLICY OF THE GOVERNMENT OF GHANA, 2003 at 8, 16, 24, 96. The 2004 budget, acknowledging that actual receipts were significantly lower than projections in 2003 due to shortfalls in grants and other non-tax revenues, which resulted in an actual deficit in 2003 of 3.4% rather than the anticipated 3.1%, projected a budget surplus for 2004 of 1.67%. YAW OSAFO-MAAFO, THE BUDGET STATEMENT AND ECONOMIC POLICY OF THE GOVERNMENT OF GHANA, 2004 at 16, 19, 42.

²⁷⁹ For example, if developed countries follow through on their recent pledges to relieve existing debt and double aid efforts in Africa. See, e.g., *A First Step on*

However, a subsequent change of policies by the aid donor countries could cripple expectant aid recipients like Ghana, as foreign aid typically substitutes for—rather than supplements—domestic revenue raising efforts.²⁸⁰

Multinational companies may be expected to increase the government's ability to collect revenues by creating a larger wage base for personal income tax. Wages in LDCs such as Ghana, however, average \$1 per day, producing little for the government to share.²⁸¹ If wages are raised through regulatory action, many multinationals may disengage to seek low wages elsewhere, since the low cost of labor is often a primary reason multinationals set up in LDCs.²⁸² Although workers may benefit individually from employment created by foreign investment, even if wages are only minimally higher than that offered by other local employment, they are not necessarily placed in a better position with respect to paying taxes.²⁸³

Investment protection or insurance—whether made available through private or public institutions—may promote foreign investment despite a country's infrastructural deficiencies. In the U.S., investment protection is provided to

African Aid, N.Y. TIMES, June 14, 2005, at A22 (describing Bush's pledge to "ease the burden of debt in Africa"); Celia W. Dugger, *U.S. Challenged to Increase Aid to Africa*, N.Y. TIMES, June 5, 2005, at A10 (describing building consensus for doubling of aid to Africa); Paul Blustein, *After G-8 Aid Pledges, Doubts on 'Doing It,'* WASH. POST, July 10, 2005, at A14 (describing pledges of the G-8 countries to double their aid to Africa, but noting that "[t]he amounts actually spent have a history of falling far short of the amounts pledged").

²⁸⁰ Kaldor, *supra* note 267, at 410.

²⁸¹ Nearly 45% of the population of Ghana lives on less than \$1 per day. United Nations

Development Programme, Human Development Report, 2005, at 228, available at <http://hdr.undp.org/reports/global/2005>. In all of Sub-Saharan Africa, the figure is close to 46%. See Patricia Kowsmann, *World Bank Finds Global Poverty Down By Half Since 1981*, U.N. WIRE, April 23, 2004, available at http://www.un.org/special-rep/ohrrls/News_flash2004/23%20Apr%20World%20Bank%20Finds%20Global.htm.

Globally, it is estimated that about half of the earth's population lives on under \$2 per day, a fact that has been central to the most recent efforts of the U.S. to combat poverty with new foreign aid strategies aimed at economic growth. See, e.g., Colin L. Powell, *Give Our Foreign Aid to Enterprising Nations*, NEWSDAY (New York), June 11, 2003, at A34 (discussing the role of the Millennium Challenge Account in a new strategy of directing foreign aid to "support for sustainable development" in the face of the ongoing challenge of widespread global poverty).

²⁸² HOOKE, *supra* note 124, at 18-19.

²⁸³ See Nicholas D. Kristof, *Inviting All Democrats*, N.Y. TIMES, Jan. 14, 2004, at A19 (arguing that "the fundamental problem in the poor countries of Africa and Asia is not that sweatshops exploit too many workers; it's that they don't exploit enough," as illustrated by the example of a young Cambodian woman who averages seventy-five cents a day from picking through a garbage dump and for whom "the idea of being exploited in a garment factory—working only six days a week, inside instead of in the broiling sun, for up to \$2 a day—is a dream").

U.S. investors through the United States Export-Import Bank (“Ex-Im Bank”), an independent federal government agency that “assume[s] credit and country risks the private sector is unable or unwilling to accept,” through export credit insurance, loan guarantees, and direct loans to U.S. businesses investing in foreign countries.²⁸⁴ For example, Ex-Im Bank insurance covers the risk of foreign buyers not paying bills owed to U.S. investors, the risk that a foreign government might restrict the U.S. company from converting foreign currency to U.S. currency, and even the risk of loss due to war.²⁸⁵ In effect, this kind of investment protection substitutes U.S. infrastructure for that existing in LDCs.²⁸⁶

The Ex-Im Bank has a Sub-Saharan Africa Advisory Committee devoted specifically to supporting U.S. investment activity in this region.²⁸⁷ With investment protection available as a substitute for prohibitive infrastructural shortcomings, investment in LDCs like Ghana may not be economically prohibitive. Yet, the persistently low level of foreign investment in Ghana and Sub-Saharan Africa as a whole suggests that investment protection is not enough to overcome the barriers perceived by potential investors.

E. Entrenched Investor Perception

As tax treaties with LDCs may provide little commercial benefit to investors when little or no income tax is imposed in these countries, it is perhaps not surprising that they are correspondingly low on the list of U.S. treaty priorities.²⁸⁸

²⁸⁴ See Mission of Export-Import Bank of the United States, <http://www.exim.gov/about/mission.html> (last visited Jan. 13, 2006).

²⁸⁵ See, e.g., Multi-Buyer Export Credit Insurance, http://www.exim.gov/products/insurance/multi_buyer.html (last visited Jan. 13, 2006).

²⁸⁶ The subsidy is not without controversy. See, e.g., Heather Bennett, *House OKs Measure to Block Loans to Companies Relocating in Tax Havens*, 2004 WTD 139-4 (reporting that as part of a foreign aid bill, U.S. Export-Import Bank loans would no longer be made to corporate entities chartered in one of several listed tax havens because, according to Representative Sanders, who offered the bill, “[c]ompanies that dodge U.S. taxes should not be rewarded with taxpayer handouts,” but should “go to the government” of the applicable tax haven for such privileges).

²⁸⁷ See Export-Import Bank of the United States, Sub-Saharan Africa Advisory Committee, <http://www.exim.gov/about/leadership/africa.htm> (last visited Dec. 6, 2005).

²⁸⁸ See Statement of Barbara Angus, *supra* note 5, at 10, stating that the United States generally does not:

conclude tax treaties with jurisdictions that do not impose significant income taxes, because there is little possibility of the double taxation of income in the

Nevertheless, tax treaties continue to be promoted for their ability to increase investment between developed and less-developed countries. One theory for their promotion is that increased investment can be expected due to the signaling effects of tax treaties.²⁸⁹ For example, it has been suggested that tax treaties may signal a stable investment and business climate in which treaty partners express their dedication to protecting and fostering foreign investment.²⁹⁰

Proponents of this argument suggest that in the process of negotiating a tax treaty, governments of LDCs may subject their operations to increased transparency and accountability, thus providing additional benefits to potential investors (as well as domestic taxpayers) in the form of assurances regarding the proper management of public goods.²⁹¹ Thus, bilateral tax treaties may

cross-border context that tax treaties are designed to address: with such jurisdictions, an agreement focused on the exchange of tax information can be very valuable in furthering the goal of reducing U.S. tax evasion.

²⁸⁹ Mutén, *supra* note 79, at 5.

²⁹⁰ The Secretary of the Treasury proclaimed the importance of signing a tax treaty with Honduras in 1956, stating that as the first treaty with any Latin American country,

[t]he agreement may . . . have a value far beyond its immediate impact on the economic relations between the United States and Honduras. It may generate among smaller countries an increased awareness of the need to create an economic atmosphere that will lend itself to increased private American investment and trade.

Dulles, *supra* note 5, at 1444. Similar sentiment has been expressed in the context of many treaties, especially those with LDCs, over the years. *See, e.g.*, STAFF OF S. FOREIGN RELATIONS COMM., 108TH CONG., TAXATION CONVENTION AND PROTOCOL WITH THE GOVERNMENT OF SRI LANKA 4 (S. Exec. Rpt. 108-11, Mar. 18, 2004) (“in countries where an unstable political climate may result in rapid and unforeseen changes in economic and fiscal policy, a tax treaty can be especially valuable to U.S. companies, as the tax treaty may restrain the government from taking actions that would adversely impact U.S. firms”); STAFF OF THE JOINT COMM. ON TAXATION, 106TH CONG., EXPLANATION OF PROPOSED INCOME TAX TREATY AND PROPOSED PROTOCOL BETWEEN THE UNITED STATES AND THE REPUBLIC OF VENEZUELA 61 (Comm. Print 1999) (“the proposed treaty would provide benefits (as well as certainty) to taxpayers”). These concepts are also reflected in commentary. *See, e.g.*, ANDERSEN & BLESSING, *supra* note 10, at ¶ 1.02[3][b] (“[in the context of LDCs,] tax treaties provide foreign investors enhanced certainty about the taxation of the income from their investments.”); *see also* Davies, *supra* note 216, at 3 (“even a treaty that merely codifies the current practice reduces uncertainty for investors by lowering the likelihood that a government will unilaterally change its tax policy”).

²⁹¹ *See, e.g.*, U.N. Dep’t of Econ. & Soc. Affairs, *The Significance of Bilateral Tax Treaties Between Developed and Developing Countries*, ¶ 10, U.N. Doc. ST/SG/2001/L.9 (Apr. 2, 2001) (prepared by Mayer Gabay), available at <http://unpan1.un.org/intradoc/groups/public/documents/un/unpan000550.pdf> (suggesting that the first advantage to a LDC of entering into a bilateral tax treaty is the negotiation process itself, because that process creates a degree of transparency,

serve largely to “signal that a country is willing to adopt the international norms” regarding trade and investment, and hence, that the country is a safe place to invest, especially “in light of the historical antipathy that many developing and transition countries have in the past exhibited to inward investment.”²⁹²

Signaling is a slippery concept because it is difficult to measure whether signaling is occurring and, if so, whether and to what extent it is impacting investors. The potential for signaling a stable investment climate through tax treaties with LDCs in Sub-Saharan Africa is especially hampered by the persistence of negative perceptions about this region’s investment climate.²⁹³ Foreign investors in LDCs often take a regional, rather than national, approach to investment, attributing the negative aspects of one country to others in the vicinity.²⁹⁴ Since few Sub-Saharan African countries have tax treaties, and many countries in the region suffer from civil unrest and economic failure, Ghana’s ability to demonstrate stability and certainty may garner little individual attention from foreign investors unfamiliar with its particular situation.²⁹⁵

In addition, the signaling effect is tied to a country’s reputation in upholding its international compacts. Short of terminating a treaty, there is no formal enforcement mechanism should a country proceed to ignore its treaty obligations.²⁹⁶ For example, it is difficult to imagine that a tax

which in turn promotes “greater rationality in decision making[,]” which “can be of great economic benefit to the developing country”)

²⁹² Stewart, *supra* note 11, at 148 (citing Richard J. Vann, *International Aspects of Income Tax*, in 2 TAX LAW DESIGN AND DRAFTING 726 (Victor Thuronyi ed., 2000)).

²⁹³ See UNCTAD, *supra* note 2, at 1.

²⁹⁴ UNCTAD, *supra* note 2, at iv, (“[L]ittle attempt is often made to differentiate between the individual situations of more than 50 countries of the continent.”); Laura Hildebrandt, *Senegal Attracts Investors, But Slowly*, 17 AFRICA RECOVERY 2-15 (2003), available at <http://www.un.org/ecosocdev/geninfo/afrec/vol17no2/172inv3.htm> (“[F]oreign investors tend to lump countries together in regions, without making much distinction among individual countries,” which might explain Senegal’s limited success in attracting foreign investment despite “relatively good infrastructure . . . a history of political stability and secular democracy, with decidedly pro-market leanings.”).

²⁹⁵ See, e.g., Hildebrandt, *supra* note 294, at 15 (“Senegal’s reputation for stability may be offset by conflicts elsewhere in the region, such as Côte d’Ivoire.”); Thabo Mbeki: *A Man of Two Faces*, THE ECONOMIST, Jan. 22, 2005, at 27 (“[A]ny . . . plan for Africa’s redemption, will work only if functioning states with reasonably good leaders (South Africa, Botswana, Senegal, Ghana, Mozambique) can be set apart from the awful ones . . .”).

²⁹⁶ In the case of a treaty violation, a taxpayer would request the Competent Authority of its home country to negotiate with the Competent Authority in the treaty

treaty could independently create a sense of stability in a country that would otherwise be unattractive due to historical failure to protect property rights.

Finally, treaty proponents point to the certainty achieved in establishing rules consistent with international norms so that investors will know what to expect regarding the taxation of their investments in foreign countries. However, signaling certainty and stability is achieved more directly through agreements designed to provide these specific benefits. For example, delivering certainty and stability is the primary purpose of investment protection provisions in global and regional trade agreements.²⁹⁷ These goals are also encompassed in a global network of over 2,100 bilateral investment protection treaties (BITs).²⁹⁸ Ghana has seventeen such treaties currently in force.²⁹⁹ The U.S. has forty-seven in force and relies on these agreements to protect investment in source countries.³⁰⁰

Investment protection provisions and treaties outline the applicable legal structure and regulatory framework of the signatory countries and provide settlement provisions in the

partner country. For this reason, investors may desire a tax treaty to be in place so that assistance in negotiating disputes with a foreign country could be sought from the U.S. Competent Authority. However, treaties provide little recourse in the event the Competent Authorities fail to reach a resolution. See U.S. MODEL, *supra* note 56, art. 25.

²⁹⁷ See Stephen S. Golub, *Measures of Restrictions on Inward Foreign Direct Investment for OECD Countries* 6 (OECD Econ. Dep't, Working Paper No. 357, 2003). Most of the LDCs in Sub-Saharan Africa, including Ghana, have signed multilateral agreements dealing with the protection of foreign investment, such as the Convention establishing the Multilateral Investment Guarantee Agency and the Convention on the Settlement of Investment Disputes between States and Nationals of Other States. See UNCTAD, *supra* note 2, at 7-8.

²⁹⁸ WIR 2003, *supra* note 118, at 89-91 (stating that BITs signal a country's attitude towards and climate for foreign investment, and that investors "appear to regard BITs as part of a good investment framework"). Worldwide, there are 2,181 BITs currently in force, encompassing 176 countries. *Id.* at 89. As in the case of tax treaties, significantly more BITs would be required to achieve global coverage. See *supra* note 71 and accompanying text.

²⁹⁹ These treaties include agreements with Benin, Bulgaria, Burkina Faso, China, Cuba, Denmark, Egypt, France, Germany, Guinea, India, Malaysia, Mauritius, Netherlands, Romania, Switzerland, and the United Kingdom. See UNCTAD Bilateral Investment Treaty Database, <http://www.unctadxi.org/templates/DocSearch.aspx?id=779> (last visited Jan. 14, 2006).

³⁰⁰ *Hearing Before the S. Foreign Relations Comm. on Economic Treaties*, 108th Cong. 9-10 (2004) (statement of Shaun Donnelly, Principal Deputy Assistant Secretary, Bureau of Economic and Business Affairs, State Dep't) ("BITs have afforded important protections to U.S. investors"). The U.S. currently has four BITs with LDCs in Sub-Saharan Africa: Cameroon, Mozambique, Senegal, and the Democratic Republic of the Congo. For a list of U.S. BITs currently in force, see UNCTAD Bilateral Investment Treaty Database, *supra* note 299.

event of disputes between investors and source-country governments. Common features include guarantees of compensation in the event of expropriation, guarantees of free transfers of funds and repatriations of capital and profits, and dispute settlement provisions.³⁰¹ The goal of these agreements is to promote transparency, stability, and predictability for regulatory frameworks in source countries, and therefore to reduce obstacles to the flow of foreign investment.³⁰² BITs are further bolstered through subsidized loans, loan guarantees, and other financial assistance made available to foreign investors.³⁰³

Even if the stability and certainty signaled by tax treaties could make a source country that has such agreements more attractive than one that does not, U.S. investors are unlikely to lobby for tax treaties if they do not have a direct financial interest at stake, namely, an exposure to taxation that could be alleviated by treaty.³⁰⁴

The foreign investment patterns of U.S. businesses also imply that tax treaties may be an insufficient signal to investors.³⁰⁵ First, U.S. investors will pursue investments in a country with a sufficiently attractive business environment, even in the absence of a tax treaty.³⁰⁶ For example, although the U.S. has no treaty with Brazil,³⁰⁷ U.S. foreign direct investment in Brazil is significant.³⁰⁸ Second, the mere

³⁰¹ WIR 2003, *supra* note 118, at 89.

³⁰² *Id.* at 91.

³⁰³ See *supra* note 284 and accompanying text (discussing the role of the Ex-Im Bank in subsidizing U.S. investors to LDCs).

³⁰⁴ The lobbying efforts of U.S. businesses may not be the most appropriate means of establishing a list of priorities for new treaties, however, it is one of the primary factors considered by the office of International Tax Counsel in making such decisions. See Testimony of Barbara Angus, *supra* note 5, at 10.

³⁰⁵ See Mutén, *supra* note 79, at 4.

³⁰⁶ See, e.g., Jones, *supra* note 87, at 4-5 (arguing that tax treaties “make less difference to domestic taxpayers investing abroad,” especially if taxes are low in source countries).

³⁰⁷ Brazil is one of the South American countries that refuses to negotiate with the U.S. due to the tax sparing controversy. See Laurey, *supra* note 222, at 491 n.155 (noting that due to the tax sparing controversy, Mexico was the first Latin American nation to sign a tax treaty with the U.S.); Mitchell, *supra* note 11, at 213; Guttentag, *supra* note 4, at 451-52. The latest U.S. discussions with Brazil were held in 1992. See Venuti et al., *supra* note 14. As Brazil continued to insist on tax sparing and the U.S. refuses to negotiate with countries that insist on including such a provision, no further meetings are planned. See *id.*

³⁰⁸ As valued at historical cost (book value of U.S. direct investors’ equity in and net outstanding loans to Brazilian affiliates), U.S. foreign direct investment in Brazil is currently valued at almost \$30 billion. Borga & Yorgason, *supra* note 101, at 49. At 1.7% of total U.S. foreign direct investment, Brazil’s market for U.S. foreign

presence of a tax treaty will generally overcome neither an otherwise poor business climate, nor one that deteriorates after a treaty is in place. For example, the U.S. entered into a treaty with Venezuela in 1999, but the amount of U.S. capital flowing to Venezuela subsequently dropped sharply due to “concerns over regulations and political instability in the country.”³⁰⁹

Finally, some investors may not necessarily want a tax treaty because such agreements usually include measures that prevent tax evasion, as discussed above.³¹⁰ Thus while tax treaties may send positive signals to investors, they may as likely send negative signals to the extent they lead the way to stronger enforcement of tax laws. Supporting tax evasion is clearly indefensible as a policy for encouraging investment in LDCs, but the benefits of such opportunities to existing investors, and the cost of eliminating such opportunities, cannot be ignored.³¹¹

Nevertheless, easing enforcement and administration of the tax laws of potential LDC treaty partners may be an alternative reason to continue expanding the U.S. tax treaty network.³¹² For example, the information-exchange provisions

direct investment is not far behind that of some developed countries, including Spain (with 2.1% of U.S. foreign direct investment) and Australia (with 2.3%). *Id.* at 42.

³⁰⁹ UNCTAD, FDI in Brief: Venezuela (2004), http://www.unctad.org/sections/dite_fdistat/docs/wid_ib_ve_en.pdf.

³¹⁰ In the past, tax treaties may have contributed to tax evasion by creating opportunities for “treaty shopping” through the use of multi-country tiered structures such as the one shut down in *Aiken Indus., Inc. v. Comm’r*, 56 TC 925 (1971). In that case, the U.S.-Honduras treaty then in force was used to channel interest payments free of tax from the U.S. to the Bahamas. *Id.* at 929-31. The U.S.-Honduras treaty was terminated in 1966, before the case was decided but in connection with these kinds of structures, deemed to be void of any “economic or business purpose” by the Tax Court. *Id.* at 929, 934. Treaty shopping has since been curtailed in newer treaties and protocols by means of stronger limitation of benefits provisions. *See* Arnold & Dibout, *supra* note 252, at 73-74.

³¹¹ Just as in the cases of deferral and bank secrecy, the private sector can be expected to protect tax advantages regardless of whether they comport with a coherent tax policy.

³¹² Obtaining cooperation in tax enforcement through information sharing provisions is a major factor in the completion of treaties from the perspective of the U.S. For example, the newly-ratified tax treaty with Sri Lanka was originally negotiated almost twenty years ago but only entered into force this year. U.S.-Sri Lanka Treaty, *supra* note 4; Treasury Press Rel. JS-1809, *supra* note 4. Ten years of the delay were due to Sri Lanka’s reluctance in accepting U.S. requests regarding information exchange. *See* Letter of Submittal from Colin L. Powell, U.S. Department of State, to the President (Aug. 26, 2003), *reprinted in* Protocol Amending Tax Convention with Sri Lanka, U.S.-Sri Lanka, Sept. 20, 2002, S. TREATY DOC. NO. 108-9 (2003). The fact that, as in the case of Ghana, Sri Lanka’s statutory rates and tax incentive regimes indicate that the domestic tax regime is as or more favorable than that provided under the treaty, suggests that prevention of double taxation plays a much less significant role than prevention of tax evasion.

might enable Ghana to extend its current, basically territorial, regime to a worldwide regime.³¹³ The benefit of such a regime would depend on the amount of savings shifted to the U.S. by Ghanaian persons before and after the treaty. This is presumably a relatively tiny amount by global standards,³¹⁴ but it might be significant to the overall revenue picture in Ghana. However, Ghana's limited tax treaty network significantly restricts its ability to enlarge its taxing jurisdiction, since Ghanaians could simply choose a location other than the U.S. for their offshore activities, avoiding Ghanaian tax even under a worldwide system.³¹⁵

Moreover, as in the case of investment protection, the benefits of information exchange are as readily—and more broadly—achieved through agreements specifically addressing this issue. Information exchange is comprehensively addressed in Tax Information Exchange Agreements (TIEAs), which are generally bilateral, and through multilateral agreements such as the OECD TIEA.³¹⁶ Under U.S. TIEAs, assistance in tax enforcement and collection is extended not only to income taxes but to other taxes as well, making such agreements potentially more effective than tax treaties in fulfilling the goal of improved tax administration and enforcement.³¹⁷

³¹³ See U.S. MODEL, *supra* note 56, art. 26. For example, when Venezuela entered into a tax treaty with the United States, its tax regime was territorial: Venezuela imposed no tax on the foreign income of its residents. Its tax treaty with the U.S. included the typical exchange-of-information provision, which would theoretically allow Venezuela to pursue its residents who engaged in activities outside of the country, and Venezuela subsequently expanded its jurisdiction to encompass residence-based taxes. U.S.-Venezuela Treaty, *supra* note 4, art. 27.

³¹⁴ The U.S. Bureau of Economic Affairs compiles data regarding direct investment in the U.S., but Ghana is included only collectively with the rest of Africa, excluding South Africa. Borga & Yorgason, *supra* note 101, at 51. Inbound direct investment from this region is valued at \$1.8 billion, which represents less than 0.2% of that from Europe. *Id.*

³¹⁵ Ghana would not generally benefit from the larger U.S. tax treaty network since the exchange of information is only limited to that which is relevant to the two contracting states. U.S. MODEL, *supra* note 56, art. 26.

³¹⁶ The OECD Agreement has been signed by the U.S. and Canada, among others. OECD MODEL, *supra* note 21, at 2.

³¹⁷ The U.S. entered into tax treaties with many countries in Sub-Saharan Africa and the Caribbean simultaneously by territorial extension with their various colonial powers (from 1957-1958) and terminated most of these treaties simultaneously three decades later (in 1983-1984). See *supra* note 6. The U.S. subsequently entered into TIEAs only with the Caribbean nations. See, e.g., Bruce Zagaris, *OECD Report on Harmful Tax Competition: Strategic Implications for Caribbean Offshore Jurisdictions*, 17 TAX NOTES INT'L 1507, 1510 (1998). The U.S. has trade agreements with countries in both the Caribbean and Sub-Saharan Africa, sends foreign aid to both regions, and has expressed a desire to increase investment, trade, and aid to both regions. See

Absent reduction of double taxation, the non-commercial benefits of tax treaties appear incapable of independently exerting a significant influence on U.S. foreign investment, and some of the aspects of tax treaties may tend to discourage such investment. Ultimately, the value of continued expansion of the U.S. tax treaty network to LDCs may therefore be extremely limited in the context of a global tax climate that reflects the circumstances illustrated in this case study.

V. CONCLUSION

The investment and aid goals of tax treaties are undermined by competing tax regimes, including domestic U.S. rules that provide relief of current U.S. tax burdens on foreign income earned by multinational companies. To the extent multinationals can escape U.S. taxation simply by investing abroad, the U.S. fosters tax competition throughout the world as foreign countries compete to attract the U.S. capital fleeing taxation at home. As a result of this international tax competition and a corresponding divergence in tax mix between developed and less developed countries, much of the tax ostensibly relieved under tax treaties no longer exists to a significant extent with respect to investment in many LDCs.

As a result, traditional tax treaties with these countries may offer few commercial benefits to investors. Tax treaties may provide non-commercial benefits to partner countries and investors by signaling stability or suitability or by providing certainty. However, these incidental benefits are likely insufficient to significantly impact investment in many LDCs, particularly those in Sub-Saharan Africa. Thus, as this case study of Ghana demonstrates, much of the conventional wisdom about the impact of tax treaties on the global flow of investment does not apply in the context of many of the LDCs most in need of realizing the benefits attributed to these agreements.

Tax treaties represent a significant opportunity cost for LDCs, diverting attention and resources away from the exploration of more direct ways to increase cross-border investment. Thus, every potential tax treaty relationship with LDCs should be approached critically. If a tax treaty cannot be expected to provide sufficient benefits to investors, it should

supra notes 2-3. Yet there is no agreement on tax matters with respect to the LDCs in Sub-Saharan Africa. See discussion *supra* Part I.

not be pursued simply to include the target country in the network of treaty countries in a myopic adherence to traditional notions about the international tax and business community. After decades of faithfulness to the promise of tax treaties, their inability to deliver in situations involving LDCs must be acknowledged. If the U.S. is truly committed to increasing trade and investment to the LDCs of Sub-Saharan Africa, it must pursue alternative means of achieving these goals.
